

Robeco QI European Conservative Equities C GBP

Robeco QI European Conservative Equities is an actively managed fund that invests in low-volatility stocks in European countries. The selection of these stocks is based on a quantitative model. The fund aims to achieve returns equal to, or greater than, those on the Benchmark with lower expected downside risk, whilst still controlling relative risk through the applications of limits (on countries and sectors) to the extent of deviation from the Benchmark. The fund will take exposure of at least two-thirds of its total assets to equities of companies incorporated or exercising a preponderant part of their economic activities in Europe. The fund will focus on investing in equities that show lower volatility than average European equity. Conservative stands for the focus on equity with low volatility.

Performance

Indexed value (until 30-04-2023) - Source: Robeco

Performance

Based on transaction prices, the fund's return was 3.15%.

The conservative equities that the fund typically selects as part of its investment strategy, outperformed the market last month.

Expectation of fund manager

The European Conservative Equities Fund invests in low volatility stocks with lower expected downside risk and good upside potential. The more stable stocks tend to be overlooked by investors, though they offer relatively high returns given their risk profile. We expect the fund to do particularly well during down markets and volatile market conditions. In a very bullish environment, the fund could lag the overall market, yet still deliver good absolute returns. In the long term, we expect stable equity returns and high income with considerably lower downside risk.

Top 10 largest positions

The top ten positions are primarily the result of the fact that these large companies have a low expected volatility combined with good upside potential.

Sustainability

The fund systematically incorporates sustainability in the investment process via exclusions, ESG integration, ESG and environmental footprint targets, engagement and voting. The fund does not invest in stocks issued by companies that are in breach of international norms or where its activities have been deemed detrimental to society following Robeco's exclusion policy. Financially material ESG factors are integrated in the portfolio construction to ensure the ESG score of the portfolio is better than that of the index. In addition, the environmental footprints of the fund are made lower than that of the benchmark by restricting the GHG emissions, water use and waste generation. With these portfolio construction rules, stocks issued by companies with better ESG scores or environmental footprints are more likely to be included in the portfolio while stocks issued by companies with worse ESG scores or environmental footprints are more likely to be divested from the portfolio. In addition, where a stock issuer is flagged for breaching international standards in the ongoing monitoring, the issuer will become subject to engagement. Lastly, the fund makes use of shareholder rights and applies proxy voting in accordance with Robeco's proxy voting policy.

Sustainalytics ESG Risk Rating

The Portfolio Sustainalytics ESG Risk Rating chart displays the portfolio's ESG Risk Rating. This is calculated by multiplying each portfolio component's Sustainalytics ESG Risk Rating by its respective portfolio weight. If an index has been selected, those scores are provided alongside the portfolio scores, highlighting the portfolio's ESG risk level compared to the index. The Distribution across Sustainalytics ESG Risk Levels chart shows the portfolio allocations broken into Sustainalytics' five ESG risk levels: negligible (0-10), low (10-20), medium (20-30), high (30-40) and severe (40+), providing an overview of portfolio exposure to the different ESG risk levels. If an index has been selected, the same information is shown for the index. Only holdings mapped as corporates are included in the figures. Source: Copyright ©2022 Sustainalytics. All rights reserved.

Source: Copyright ©2023 Sustainalytics. All rights reserved.

Environmental Footprint

Environmental footprint expresses the total resource consumption of the portfolio per mUSD invested. Each assessed company's footprint is calculated by normalizing resources consumed by the company's enterprise value including cash (EVIC). We aggregate these figures to portfolio level using a weighted average, multiplying each assessed portfolio constituent's footprint by its respective position weight. Sovereign and cash positions have no impact on the calculation. If an index is selected, its aggregate footprint is shown besides that of the portfolio. The equivalent factors that are used for comparison between the portfolio and index represent European averages and are based on third-party sources combined with own estimates. As such, the figures presented are intended for illustrative purposes and are purely an indication. Figures only include corporates. The reported waste generation by companies in the portfolio and index can include Incinerated Waste, Landfill Waste, Nuclear Waste, Recycled Waste and Mining Tailing Waste. While these types of waste have different environmental impacts, in the comparison all types of waste are aggregated and expressed as total weight. The difference in tonnes/mUSD invested between portfolio and index is expressed as 'equivalent to the annual waste generation of # people', based on the average tonnes of household waste generated per European.

Asset Allocation

Asset allocation		
Equity		98.5%
Cash		1.5%

Sector allocation

The European Conservative Equities Fund is not benchmark driven. It uses a quantitative stock selection model for bottom-up selection of stocks with low absolute risk and high expected return characteristics. The current weights in defensive sectors are high compared to regular indices. This is due to the fact that these sectors contain a relatively large number of stable and attractively priced stocks.

Country allocation

The European Conservative Equities Fund is not benchmark driven. It uses a quantitative stock selection model for bottom-up selection of stocks with low absolute expected risk and high expected return characteristics. The current weights in certain countries are high compared to regular indices. This is due to the fact that these countries contain a relatively large number of stable stocks, which are attractively priced.

Investment policy

Robeco QI European Conservative Equities is an actively managed fund that invests in low-volatility stocks in European countries. The selection of these stocks is based on a quantitative model. The fund aims for a better sustainability profile compared to the Benchmark by promoting certain E&S (i.e. Environmental and Social) characteristics within the meaning of Article 8 of the European Sustainable Finance Disclosure Regulation and integrating ESG and sustainability risks in the investment process and applies Robeco's Good Governance policy. The fund applies sustainability indicators, including but not limited to, normative, activity-based and region-based exclusions, and engagement. The fund will take exposure of at least two-thirds of its total assets to equities of companies incorporated or exercising a preponderant part of their economic activities in Europe. The fund will focus on investing in equities that show lower volatility than average European equity. Conservative stands for the focus on equity with low volatility. The majority of stocks selected will be components of the Benchmark, but stocks outside the Benchmark may be selected too. The fund can deviate substantially from the weightings of the Benchmark. The fund aims to achieve returns equal to, or greater than, those on the Benchmark with lower expected downside risk, whilst still controlling relative risk through the applications of limits (on countries and sectors) to the extent of deviation from the Benchmark. The Benchmark is a broad market weighted index that is not consistent with the ESG characteristics promoted by the fund.

Fund manager's CV

Pim van Vliet is Head of Conservative Equities and Chief Quant Strategist. As Head of Conservative Equities, he is responsible for a wide range of global, regional, and sustainable low-volatility strategies. He specializes in low-volatility investing, asset pricing, and quantitative finance. He is the author of numerous academic research papers including publications in the Journal of Banking and Finance, Management Science, and the Journal of Portfolio Management. Important information

Risk factors you should consider before investing: Markets: The value of investments and the income from them can go down as well as up and you may get back less than the amount invested. Exchange Rates: Investing globally can bring additional returns and diversify risk. However, currency exchange rate fluctuations may have a positive or negative impact on the value of your investment. Country : Less developed countries may face more political, economic or structural challenges than developed countries. This may mean your money is at greater risk. The risks outlined might be particularly relevant to this fund and should always be read in conjunction with all warnings and comments given in the prospectus and KIID for the fund. Other important information: The fund constitutes a recognised scheme under section 264 of the Financial Services and Markets Act. Nothing herein constitutes investment, legal, tax or other advice and is not to be relied upon in making an investment or other decision. No recommendation is made, positive or otherwise, regarding individual securities mentioned. You should seek professional advice before making any investment decisions. This is not an invitation to subscribe for shares in the Fund and is by way of information only. Subscriptions will only be received and shares issued on the basis of the current Prospectus, relevant Key Investor Information Document (KIID) and other supplementary information for the Fund. These can be obtained free of charge from Northern Trust Global Serviced Limited, 50 Bank Street, Canary Wharf, London E14 5NT or from our website www.robeco.com. The ongoing charges mentioned in this publication express the operational costs including management fee, service fee, tax d'abonnement, depositary fee and bank charges and is the one stated in the fund's latest annual report at closing date. Robeco Institutional Asset Management B.V., Rotterdam (Trade Register no. 24123167) is registered with the Netherlands Authority for the Financial Markets in Amsterdam and subject to limited regulation in the UK by the Financial Conduct Authority. Details about the extent of our regulation by the Financial Conduct Authority are available from us on request. Unless otherwise stated, performances are i) net of fees based on transaction prices and ii) with dividends reinvested.
