

Summary document

RobecoSAM Net Zero 2050 Climate Equities

This financial product promotes environmental or social characteristics, but does not have as its objective sustainable investment.

Sustainability Objective

The Fund contributes to keeping the maximum global temperature rise well-below 2°C by reducing the carbon footprint of its global equity portfolio. The Fund has a carbon-reduction objective and uses a Climate Transition benchmark to monitor the carbon profile of the Fund. The foregoing is implemented by essentially actively investing in companies that contribute to achieve Net Zero by 2050.

A part of the investments made by the Fund contribute to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

Investment Strategy

RobecoSAM Net Zero 2050 Climate Equities is an actively managed Fund that invests in companies in developed markets who have the objective to contribute to keeping the maximum global temperature rise well-below 2°C and those that have set Net Zero commitments. The selection of these stocks is based on Fundamental analysis. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Fund applies norms-based and activity-based exclusions, Robeco's good governance policy and considers Principal Adverse Impacts in the investment process.

Benchmark

The Fund uses the MSCI World Climate Change Index as a reference index to meet the carbon footprint reduction objective of the Fund and thereby keeping the maximum global temperature rise well-below 2°C.

Proportion of investments

The fund plans to make a minimum of 90% sustainable investments, with the remainder of the investments made mostly in cash and cash equivalents.

Monitoring and due diligence

Robeco has incorporated the sustainability aspects of the investment strategies into adequate investment due diligence processes and procedures for the selection and monitoring of investments, amongst others taking into account Robeco's risk appetite and sustainability risk management policies. Portfolio managers and analysts are primarily responsible for conducting investment due diligence on their strategies on a daily basis. They are supported by independent monitoring, performed by the Financial Risk Management and Investment Restrictions departments.

Data sources, methodologies and limitations

The fund uses several sources for gathering sustainability data. Robeco scrutinises the data quality of each provider during due diligence assessments, that includes reviewing the data model, performing statistical checks and evaluating coverage. Data processing takes places in different forms, the preference is always to have data acquisition as automated as possible to avoid any operational risks or unnecessary human intervention.

Robeco maintains comprehensive methodology documents of our proprietary analytical frameworks on our website. In addition, for some social and environmental characteristics, Robeco relies on externally sourced content for which we aim to select the best of breed vendor for each of our target characteristics. The primary limitation to the methodology or data source is the lack of corporate disclosure. Like many other financial market participants, we struggle to find adequate information on the principal adverse indicators. To overcome this issue, Robeco has resorted to using multiple data providers, since each has its own respective strengths and weaknesses.

Engagement strategy

The holdings of the fund are subject to the selection process of Robeco's value engagement program, that consists of a constructive dialogue between investors and investee companies to discuss how they manage ESG risks and opportunities, as well as stakeholder impact. Although this type of engagement is not directly related to the sustainable investment objective of the fund, it can be that adverse sustainability impacts are addressed via the value engagement program.
