About the fund

Robeco 3D EUR Enhanced Index Credits UCITS ETF is actively managed and will seek to achieve its investment objective by investing primarily in a portfolio of fixed or floating rate corporate bonds that are part of the Benchmark. While most of the Fund's investments will be components of the Benchmark, securities outside of the Benchmark can be selected too. While the Fund is actively managed and is not constrained by the composition of its Benchmark, it is subject to the Manager's internal investment guidelines that may limit the extent to which the Fund's portfolio and performance deviate from those of the Benchmark. The Fund is allowed to invest in off-benchmark bonds, Money Market Instruments, bank deposits (other than deposits at sight) and other eligible liquid assets for treasury purposes and in case of unfavourable market conditions.

Key risks

- The value of shares is sensitive to market fluctuations, instrument prices, and changes in political, economic, or market conditions. Corporate bonds are more risky and volatile investments compared to government bonds.
- The fund may use derivatives to achieve its investment objectives. These instruments can create leverage, increasing the fund's exposure to market fluctuations.
- A (derivative) counterparty may fail to fulfil its obligations. Counterparty risk is reduced by exchanging collateral.
- The fund is managed using quantitative models. Materialisation of the model risk may adversely affect fund performance.
- This fund promotes ESG characteristics, but does not have sustainable investing as its objective. Sustainability risks are integrated in the investment decisions and may impact returns.

Market development

The Bloomberg Euro Aggregate Corporates Index posted a positive credit return of 0.77% as credit spreads tightened from 97 to 82 bps. The total return was 0.94%, as underlying government bond yields decreased somewhat. April 2026 saw strong risk-on sentiment in financial markets despite geopolitical stress. Global equities rallied sharply, with US up around 10%, fueled by a strong earnings season, Europe posting gains of around 5%, and EM outperforming at about 15%, driven by AI-related sectors. In credit markets, risk appetite drove spreads tighter; high yield outperformed investment grade in both the US and Europe. Government bonds faced pressure toward month-end, with 10-year yields in both the US and Germany ending the month a few basis points higher. This move reflected persistent inflation concerns from higher energy prices and a hawkish shift in expectations, even as the Fed and ECB both kept headline interest rates unchanged during their late-April meetings. Politically, markets were dominated by the conflict in the Middle East and the continued closure of the Strait of Hormuz, which sent Brent oil prices back to above USD 110.

Expectation of fund manager**Sector allocation**

Allocations to sectors are limited to 25% (hence avoiding the index's concentration to financials) and an outright restriction to REITs. They are otherwise non-tactical, and incidental to the bond selection, which is generated by the quantitative multi-factor ranking model. The portfolio exposures to the basic industry, agency and brokerage/asset managers/exchanges sectors increased over the month, while the exposures to the consumer non-cyclical and banking sectors decreased. The portfolio has turned overweight in the basic industry sector. The largest underweights are in the electric utility and insurance sectors; the largest overweights are in the agency and banking sectors.

Duration allocation

The duration position is non-tactical and incidental to the bond selection which is generated by the quantitative multi-factor ranking model. Duration is subsequently hedged to that of the benchmark using interest rate derivatives.

Rating allocation

Allocations to rating buckets are non-tactical, and incidental to the bond selection, which is generated by the quantitative multi-factor ranking model. The portfolio exposure to AA-rated paper increased, while the exposure to A paper decreased. The portfolio is underweight in BAA-rated bonds and overweight in AA and A bonds, and holds about 5% in off-benchmark BAs.

ESG Important information

The sustainability information in this factsheet can help investors integrate sustainability considerations in their process. This information is for informational purposes only. The reported sustainability information may not at all be used in relation to binding elements for this fund. A decision to invest should take into account all characteristics or objectives of the fund as described in the prospectus. The prospectus is available on request and free of charge on the Robeco website.

Reference

1. SDG Impact Alignment

This distribution across SDG scores shows the portfolio weight allocated to companies with a positive, negative and neutral impact alignment with the Sustainable Development Goals (SDG) based on Robeco's SDG Framework. The framework utilizes a three-step approach to assess a company's impact alignment with the relevant SDGs and assign a total SDG score. The score ranges from positive to negative impact alignment with levels from high, medium or low impact alignment. Only holdings mapped as corporates are included in the figures.

2. Environmental Footprint

Environmental footprint expresses the total resource consumption of the portfolio per mUSD invested. Each assessed company's footprint is calculated by normalizing resources consumed by the company's enterprise value including cash (EVIC). We aggregate these figures to portfolio level using a weighted average, multiplying each assessed portfolio constituent's footprint by its respective position weight. The equivalent factors that are used for comparison between the portfolio and index (where applicable) represent European averages and are based on third-party sources combined with own estimates. As such, the figures presented are intended for illustrative purposes and are purely an indication. Only holdings mapped as corporates are included in the figures.

The content is not a recommendation to buy, sell or hold such investment or security, nor does it address suitability of an investment or security and should not be relied on as investment advice.

3. Sustainalytics ESG Risk Rating

The chart displays the portfolio's Sustainalytics ESG Risk Rating. This is calculated by multiplying each portfolio component's Sustainalytics ESG Risk Rating by its respective portfolio weight. The distribution across Sustainalytics ESG Risk levels chart shows the portfolio allocations broken into Sustainalytics' five ESG risk levels: negligible (0-10), low (10-20), medium (20-30), high (30-40) and severe (40+), providing an overview of portfolio exposure to the different ESG risk levels.

Only holdings mapped as corporates are included in the figures.

4. Exclusions

The charts display the degree of adherence to exclusion applied by Robeco. Thresholds are based on revenues unless otherwise indicated. For more information about the exclusion policy and which level applies, please refer to the Exclusion Policy and Exclusion List available on Robeco.com.

5. ESG Labeled Bonds

The visual displays the portfolio's exposure to ESG-labeled bonds. This is calculated as a sum of weights for those bonds in the portfolio that have one of above mentioned labels. Index exposure figures are provided alongside the portfolio exposure figures, highlighting the difference with the index.

6. Engagement

Robeco distinguishes between three types of engagement. Value Engagement focuses on long-term issues that are financially material and/or are causing adverse sustainability impacts. The themes can be broken into Environmental, Social, Governance, or Voting-related. SDG Engagement aims to drive a clear and measurable improvement in a company's SDG contribution. Enhanced engagement is triggered by misconduct and focuses on companies severely breaching international standards. The report is based on all companies in the portfolio for which engagement activities have taken place during the past 12 months. Note that companies may be under engagement in multiple categories simultaneously. While the total portfolio exposure excludes double counting, it may not equal the sum of individual category exposures.
