This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

## Robeco Quantum Market Neutral Equities F EUR (LU2724977298)

This fund is a subfund of Robeco Capital Growth Funds, SICAV.

Management Company: Robeco Institutional Asset Management B.V.

## Objectives and investment policy

Robeco Quantum Market Neutral Equities is an actively managed fund that enables investors to benefit from opportunities in the worldwide equity market. The sub-fund follows a market-neutral equity strategy for quant investing with basic sustainability integration. Long positions (both traditional long and synthetic) are combined with short positions, which will be achieved through the use of financial derivative instruments. The sub-fund uses a quantitative model to select securities that offer favourable growth prospects at a reasonable price (long position) while selling securities of companies that seem to be overvalued (short position). The sub-fund uses a systematic and disciplined approach to rank the relative attractiveness of stocks based on fundamental, technical and sentiment variables, which are then interpreted by quantitative models. 'Quantum' stands for the investment management approach of the sub-fund which includes quantitative models that incorporate novel datasets, machine learning techniques and smart algorithms but under which trades are ultimately implemented by the Management Company. Such exposure may be obtained entirely through the use of derivatives and as a result the sub-fund may invest the liquid assets in deposits with credit institutions, money market instruments and money market funds.

The fund is classified as falling under Article 6 of Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial sector.

The Sub-fund aims to align the currency exposure of the Sub-fund with the Benchmark including through the use of derivatives.

Benchmark: ICE BofA ESTR Overnight Rate Index

The Sub-Fund is actively managed. The investment policy is not constrained by the Benchmark but the Sub-fund uses the Benchmark for performance comparison purposes in its marketing materials and for performance fee calculation.

This share class of the fund does not distribute dividend.

You can purchase or sell units in the fund on any valuation day. This fund may not be appropriate for investors who plan to withdraw their money within 5 years.

## Risk and reward profile

Lower risk - Typically lower rewards

Higher risk - Typically higher rewards

Historical data, such as is used in calculating the synthetic indicator, is not a reliable indication of the future risk profile. The risk and reward category shown is not guaranteed to remain unchanged, the categorization may shift over time. The lowest category does not mean a risk-free investment.

The fund may use derivatives to attain its investment objectives. These instruments may present a leverage effect, which will increase the sensitivity of the fund to market fluctuations.

The following risk considerations are deemed material for this fund, and are not (adequately) reflected by the indicator:

- A derivative counterparty may fail to fulfil its obligations which could result in a loss. Counterparty risk is reduced via the exchange of collateral.
- The fund invests in assets that could become less liquid in certain market conditions, which could have a significant impact on the value of these assets.
- The fund is managed using quantitative models. Materialization of the model risk may be detrimental to fund performance.
- For more details about portfolio risks, see Section 4. "Risk Considerations" of the prospectus.
