

Sustainability-related disclosures for

Robeco Capital Growth Funds - Robeco QI Global Dynamic Duration

This document provides you with information about this product in relation to the Sustainable Finance Disclosure Regulation. It is not marketing material. The information is required by law to help you understand the sustainability characteristics and/or objectives and risks of this product. You are advised to read it in conjunction with other relevant documentation on this product so you can make an informed decision about whether to invest.

(b) No sustainable investment objective	
This financial product promotes environmental or social characteristics, but does not have as its objective sustainable investment.	
Where product aims to make one or more sustainable investments explain how the indicators for adverse impacts in Table 1 of Annex I, and any relevant indicators in Tables 2 and 3 of that Annex I, are taken into account?	
The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.	
Pre-investment, the following principal adverse impacts on sustainability factors are considered: As part of Robeco's Country Sustainability ranking, the following PAIs are considered: - Table 1, PAI 15 (GHG intensity) - Table 1, PAI 16 (Investee countries subject to social violations) In addition, the Sub-fund has E/S promoting characteristics in relation to: - Tabel 3, PAI 21 (Control of Corruption) Post-investment, the following principal adverse impacts on sustainability factors are taken into account: - Table 1, PAI 15 (GHG intensity), via Robeco's engagement program More information is available via Robeco's Principal Adverse Impact Statement .	
Are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights?	
The fund does not intend to make sustainable investments.	

(c) Environmental or social characteristics of the financial product	
What are the environmental or social characteristics that the financial products promotes?	
<p>The Sub-fund has the following E/S characteristics:</p> <ol style="list-style-type: none"> 1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as exposure to controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom. 2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks. 3. The Sub-fund has a lower carbon footprint than the General Market Index (i.e. JPM GBI Global Index IG). 4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles. 	

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

(d) Investment strategy

What is the investment strategy used to meet the environmental or social characteristics promoted by the financial product?

Robeco QI Global Dynamic Duration is an actively managed Sub-fund that invests worldwide in government bonds with investment grade quality. The selection of these bonds is based on quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies Robeco's good governance and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

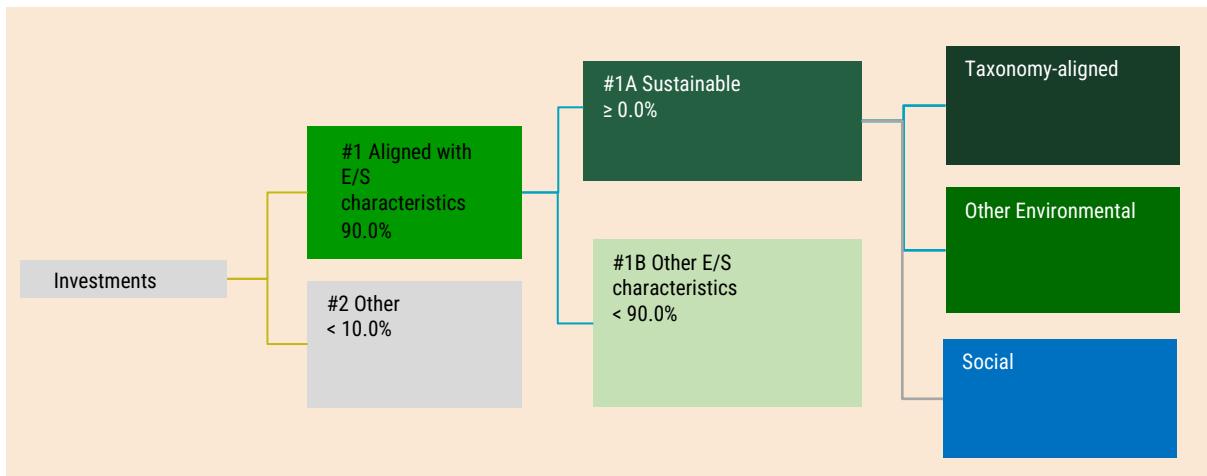

What is the policy to assess good governance practices of the investee companies, including with respect to sound management structures, employee relations, remuneration of staff and tax compliance?

The Sub-fund invests in government bonds, to which Robeco's Good Governance policy is not applicable. Robeco does have a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry-established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

(e) Proportion of investments

Minimum Sustainable Investment:

(f) Monitoring of environmental or social characteristics

How are the environmental or social characteristics promoted by the financial product and the sustainability indicators used to measure the attainment of each of those environmental or social characteristics promoted by the financial product monitored throughout the lifecycle of the financial product and what are the related internal or external control mechanisms?

For the government bonds and government related bonds (excluding government owned but not guaranteed):

1. All exclusions are coded in the Trading & Compliance module, through which investing in an excluded asset is not possible. In addition, post-trade checks take place.
2. The second line of defense (Investment Restrictions) monitors the weighted average ESG score of the portfolio versus the reference index on a daily basis and facilitates pre-trade compliance.
3. The second line of defense (Investment Restrictions) monitors the Carbon Footprint of the portfolio versus the

reference index on a daily basis and facilitates pre-trade compliance.

4. Engagement results are periodically assed by an internal and external audit. Unsuccessful engagement might lead to exclusion. All exclusions are coded in the Trading & Compliance module, through which investing in an excluded asset is not possible. In addition, post-trade checks take place.

(g) Methodologies

What are the methodologies to measure how the social or environmental characteristics promoted by the financial product are met?

Robeco maintains comprehensive methodology documents of our proprietary analytical frameworks on our website. These whitepapers go into greater depth, provide further insight into data sources and processes applied within their respective domains. More information in relation to these methodologies can be found at [Robeco's Sustainability Reports Policies](#).

In addition, for some social and environmental characteristics, Robeco relies on externally sourced content for which we aim to select the best of breed vendor for each of our target characteristics. Each vendor will have its own approach and set of internal processes, over which we have only limited influence as an end consumer. More information with regards to these methodologies can be found at [SFDR Data Disclosures document](#).

(h) Data sources and processing

- **How are the data sources used to attain each of the environmental or social characteristics promoted by the financial product?**
- **What measures are taken to ensure data quality?**
- **How is data processed?**
- **What is the proportion of data that are estimated?**

The following data sources are used:

1. The exclusion process uses several data sources such as Sustainalytics, RSPO (Roundtable on Sustainable Palm Oil), World Bank, and Freedom House, Fund for Peace and International Sanctions.
2. The Country Sustainability Ranking uses over 20 publicly available data sources such as IMF, OECD and World Bank.
3. The carbon footprint is calculated based on EDGAR data.
4. The enhanced engagement program uses data derived from the internal process.

Robeco scrutinises the data quality of each provider during due diligence assessments, that includes reviewing the data model, performing statistical checks and evaluating coverage. Data processing takes places in different forms, the preference is always to have data acquisition as automated as possible to avoid any operational risks or unnecessary human intervention.

It is currently complex to report sufficiently accurate yet broad numbers on the proportion of data that is estimated. Robeco has calculated the weighted proportion of assets covered per PAI within our standard equity and fixed income benchmarks. These figures have been calculated per provider and, where relevant, we used this coverage figure as a determining factor in our choice of vendor for that PAI since, ceteris paribus, we prefer higher coverage for our investible universe.

Robeco intends to investigate a methodology for determining the proportion of data that has been internally enriched to support wider applications, e.g., by cascading to the broader corporate structure or using sector averages as proxies. Evaluating the proportion of vendor sourced data that is estimated remains a challenge due to insufficient metadata.

More information in relation to data quality and processing can be found in the SFDR data disclosures available at [Robeco's SFDR Data Disclosures](#).

(i) Limitations to methodologies and data

What are potential limitations to the methodologies or data sources and how do such limitations not affect how the environmental or social characteristics promoted by the financial product are met?

The main limitation in terms of methodologies and data relates to the relative immaturity of corporate sustainability disclosure. In recent years, we have seen a marked increase in the availability of environmental and social data, largely

driven by regulations such as the EU Corporate Sustainability Reporting Directive (CSRD) and the Taxonomy Regulation. It remains to be seen whether this trend will continue at the pace previously anticipated given the highly politicized nature of the topic.

To address data gaps, we rely on a selection of external data providers. This introduces additional risks, as we must account for variations between providers. These include discrepancies in estimation methodologies, update frequency, and more foundational issues such as the treatment of corporate actions, security identifiers, and group structures.

From a methodological perspective, we consistently observe divergence in how vendors approach specific environmental topics. For example, regarding GHG emissions, some providers combine corporate-reported data with modelled estimates, while others use different methodological bases. It is common to find significant differences in 'reported' values across providers, stemming from varying policies, quality assurance processes, and case-by-case judgements. This is a widely acknowledged concern, as noted in publications by industry associations and regulators, including EuroSIF and IOSCO, regarding the quality and transparency of ESG data.

Carbon emissions are one of our primary environmental objectives, as this represents the most mature sustainability data theme, offering the most comprehensive coverage across our investment universe, despite the limitations noted above. To mitigate these data challenges, we conduct a thorough annual review of the Robeco-default carbon dataset, at the time of writing S&P Trucost, including a detailed impact assessment each time we transition to a new fiscal year's dataset. This rigorous verification process helps us identify and address anomalies, improving our confidence in the analyses we perform. Nonetheless, we acknowledge that significant data quality challenges persist even in this relatively more developed area of sustainability reporting.

Further information on data and methodologies is available in our [SFDR Data Disclosures document](#).

(j) Due diligence

What due diligence is carried out on the underlying assets of the financial product (including the internal and external controls)?

Robeco has incorporated the sustainability aspects of the investment strategies into adequate investment due diligence processes and procedures for the selection and monitoring of investments, amongst others taking into account Robeco's risk appetite and sustainability risk management policies.

Specific details on investment due diligence are available in Robeco's Investment Due Diligence Policy as described at [Robeco's Sustainability Risk Policy](#).

(k) Engagement policies

What is the engagement policy applied, in the case that engagement is part of the environmental or social investment strategy (including any management procedures applicable to sustainability-related controversies in investee companies)?

The governments and government-related agencies are subject to Robeco's engagement program as Robeco engages in public policy engagement. Engagement with governments, government related agencies, or regulators can add value to our engagement program. Therefore, we take part in consultations and provide feedback on regulations that facilitate a better or level playing field for ESG issues. Engagement is never intended to unduly influence the political process and Robeco only conducts engagement on public policy where it is deemed appropriate and transparent. Most of our engagement activities on this topic are coordinated through the various investor associations and collaborative groups of which we are members (for example AGCA and Eumedion). Policy engagements that are done via these collaborative platforms can be relevant from an equity investor perspective, from a bondholder perspective, or from both perspectives.

Although policy engagements are not directly related to the environmental or social investment strategy of the fund, it can be that adverse sustainability impacts are addressed via engagement program.

More information can be found in [Robeco's Stewardship Policy](#).

(I) Designated reference benchmark

Has an index has been designated as a reference benchmark to meet the environmental or social characteristics promoted by the financial product? If yes, how that index is aligned with the environmental or social characteristics promoted by the financial product, and where can one find information with regards to input data, methodologies used to select those data, the rebalancing methodologies and index calculations?

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the product.
