are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

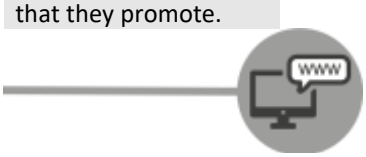
The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.



Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial

Not applicable.

product attains the environmental or social characteristics that they promote.

o) Robeco QI Customized Emerging Markets Enhanced Index Equities I

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Customized Emerging Markets Enhanced Index Equities I

Legal entity identifier: 213800789L4O5A9NKO30

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes**

●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco QI Customized Emerging Markets Enhanced Index Equities I is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

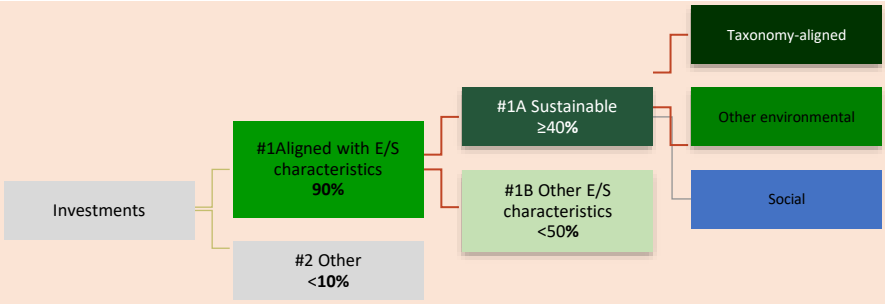
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

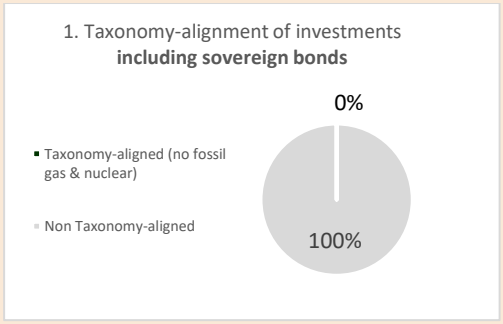
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

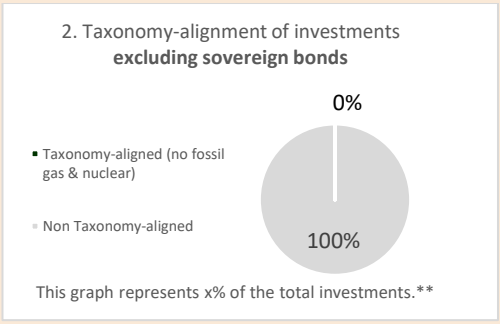
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[18]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[18] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentaly sustainable economic activities under the EU Taxonomy.

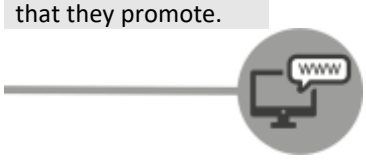
What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?



The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:
https://www.robeco.com/en/funds/

p) Robeco QI Global Quality Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Quality Equities

Legal entity identifier: 2138007QXX6VPXTZMR14

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**

☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-

step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco QI Global Quality Equities is an actively managed fund that invests in stocks in developed and Emerging Countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

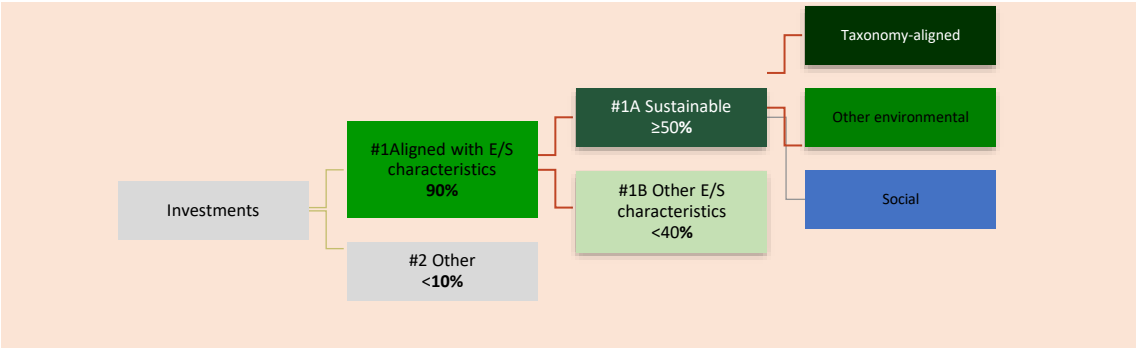
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the

green investments made by investee companies, e.g. for a transition to a green economy.
operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

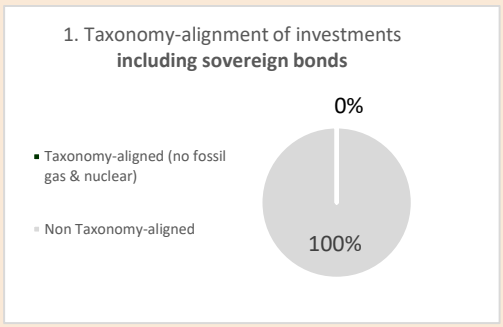
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[19]

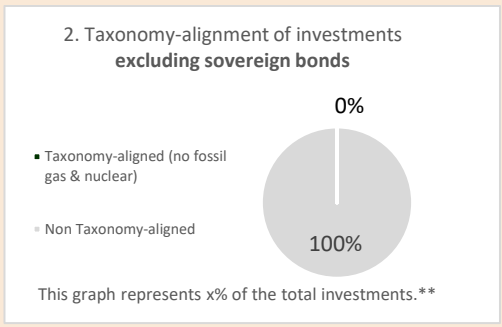
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[19] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

q) Robeco QI Global SDG & Climate Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global SDG & Climate Conservative Equities

Legal entity identifier: 213800BVPSWSGDFYVC36

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☒ **Yes** ●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 50%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It will make a minimum of **sustainable investments with a social objective: 10%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund advances the United Nation's Sustainable Development Goals (SDGs) and the Sub-fund aims to reduce the Carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2◦C. The Sub-fund has a carbon-reduction objective and uses the MSCI All Country World EU PAB Overlay Index to monitor the carbon profile of the Sub-fund.

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted Carbon footprint compared to the Paris-Aligned Benchmark.
3. The Sub-fund's weighted Water and Waste footprint score compared to the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.
6. The proportion of companies that hold a negative SDG score (-3, -2 or -1) based on the internally developed SDG Framework.
7. The Sub-fund's weighted average ESG score compared to the General Market Index.
8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the Regulation on EU Climate Benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Sustainable investments can be constituents of Paris-Aligned Benchmark. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

Sustainable investments that are not constituents of Paris-Aligned Benchmark, should all have a positive score on Robeco's SDG Framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy, Robeco's SDG Framework, and the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and

for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
  - Water and waste indicators (PAI 8-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment

Robeco QI Global SDG & Climate Conservative Equities is an actively managed fund that invests globally in low-volatility stocks of companies that advance the United Nations Sustainable Development Goals (SDGs) and contribute to maintaining the global temperature rise below 2°C. The Sub-fund's long-term aim is to achieve returns equal to, or greater than, those on global equity markets with lower expected downside risk. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the

objectives and risk tolerance.

investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

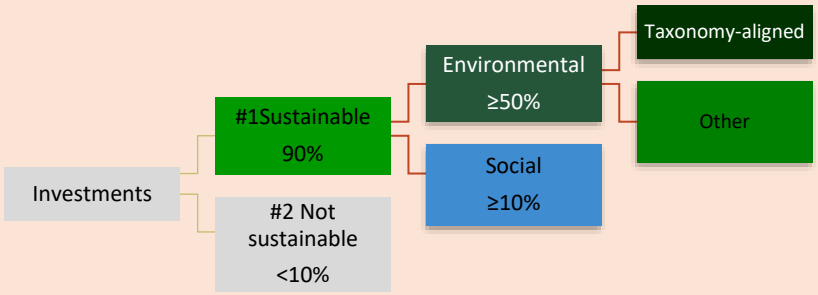
The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
2. The Sub-fund's weighted Carbon footprint is better than that of the Paris-Aligned Benchmark.
3. The Sub-fund's weighted Water and Waste footprints are at least 20% better than that of the General Market Index.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
6. The Sub-fund excludes all negative SDG scores (-3, -2 or -1).
7. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.
8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 20% better than that of the General Market Index, measured as a ratio, but is not required to exceed 95%.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and sustainable investments that adhere to the Paris-Aligned Benchmark criteria. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis. The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on

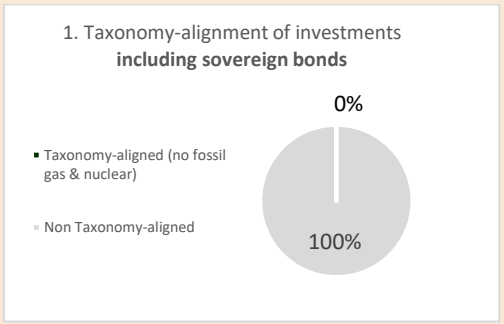
Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[20]?

☐ Yes:

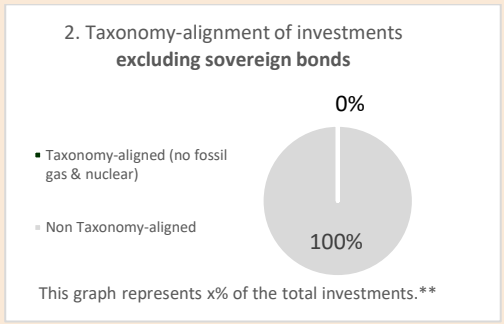
[20] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.



Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 50%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris-Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum share of sustainable investments of 10% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger),

SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Yes, the Sub-fund uses the MSCI All Country World EU PAB Overlay Index as a reference index to meet the Carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The MSCI EU PAB Overlay Indices are constructed from their corresponding Parent Indexes using an optimization-based approach and aim to:

- Reduce the weighted average greenhouse gas intensity by 50% compared to the underlying investment universe.
- Reduce the weighted average greenhouse gas (GHG) intensity by 7% on an annualized basis.
- Achieve a modest tracking error compared to the Parent Index and low turnover.
- Exclude companies based on the following criteria: Companies involved in Controversial Weapons businesses, Very Severe ESG Controversies, Severe Environmental Controversies, Tobacco Manufacturing, Thermal Coal, Oil & Gas and Fossil Fuel-based power generation.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data such as MSCI Climate Change Metrics, MSCI Climate Value-at-Risk, MSCI ESG Sustainable Impact Metrics, MSCI ESG Controversies

and MSCI Business Involvement Screening Research) as of the end of the month, preceding the Index Reviews, for the rebalancing of the index.

The Sub-fund follows a rebalancing strategy which ensures that the Carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

- ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and Carbon footprint of companies.

- ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider: https://www.msci.com

Where can I find more product specific information online?

More product-specific information can be found on the website:

https://www.robeco.com/en-int/products/funds

r) Robeco QI Global Developed Enhanced Index Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Developed Enhanced Index Equities

Legal entity identifier: 213800W6NOMU3QTJAP16

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes**

●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.
7. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).
7. The number of holdings and agenda items voted.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-

step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

o Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco QI Global Developed Enhanced Index Equities is an actively managed fund that invests in stocks of companies in developed markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
7. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

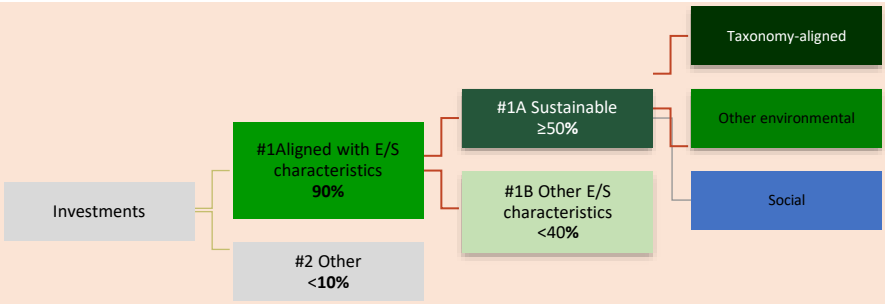
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

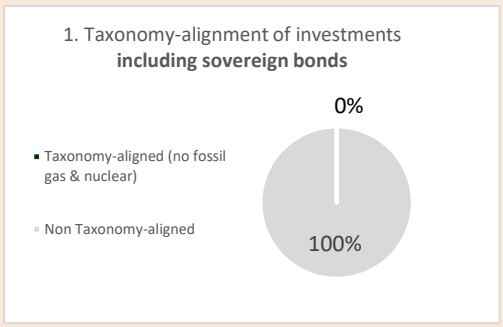
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear**

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[21]

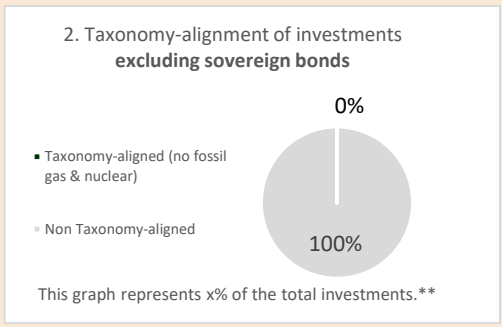
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[21] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

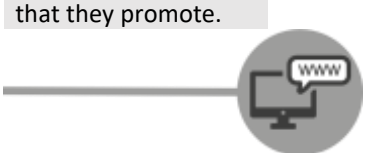
The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a

specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?



The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

s) Robeco Sustainable Emerging Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Emerging Stars Equities

Legal entity identifier: 213800OZKXE3LA1XDP06

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
6. The Sub-fund promotes investment in at least half of its portfolio in holdings that contribute to the UN Sustainable Development Goals (SDGs).
7. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings and agenda items voted.
3. The Sub-fund's weighted Carbon footprint compared to the General Market Index.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The % of holdings with an Elevated sustainability risk profile.
6. The % of portfolio holdings with a positive SDG score based on the internally developed SDG Framework.
7. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is

determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

☒ Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Sustainable Emerging Stars Equities is an actively managed fund that invests in equities in Emerging Countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

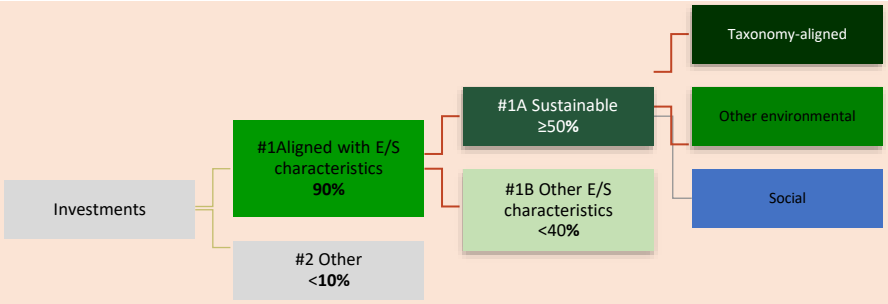
1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
3. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.
6. The Sub-fund invests at least 50% of its portfolio in companies that hold a positive SDG score based on the internally developed SDG Framework.
7. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.



Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting gree operational activities investee companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

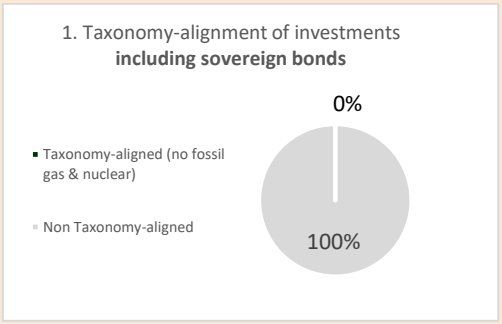
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

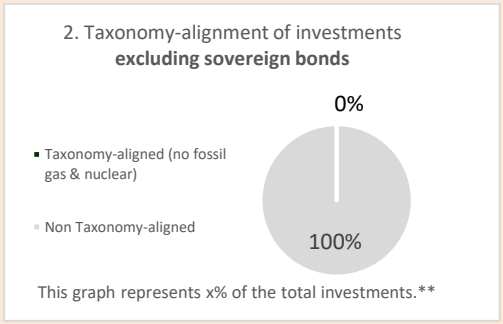
0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules. **Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[22]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[22] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

t) Robeco QI Emerging Markets 3D Enhanced Index Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Emerging Markets 3D Enhanced Index Equities

Legal entity identifier: 213800F1WPR2PVBY1880

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes**

●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
5. The Sub-fund has a substantially better weighted average ESG score than the General Market Index.
6. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
7. The Sub-fund promotes investments in companies that have a better score than -3 on the internally developed SDG Framework.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an Elevated sustainability risk profile.
7. The proportion of companies that have a high negative SDG score (-3) based on the internally developed SDG Framework.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco QI Emerging Markets 3D Enhanced Index Equities is actively managed and will apply Robeco's "3D" investment strategy, which seeks to consider risk, return and sustainability in the Sub-fund's portfolio. The Sub-fund's portfolio will be optimised using a quantitative process to target returns in excess of the Benchmark, to target better sustainability characteristics than the Benchmark, while managing risk compared to the Benchmark. The Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
2. The Sub-fund's weighted Water and Waste footprints are at least 20% better than that of the General Market Index.
3. The Sub-fund's weighted Carbon footprint is at least 30% better than that of the General Market Index.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
5. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.

6. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.
7. The Sub-fund excludes all companies with high negative SDG scores (-3) based on the internally developed SDG Framework.

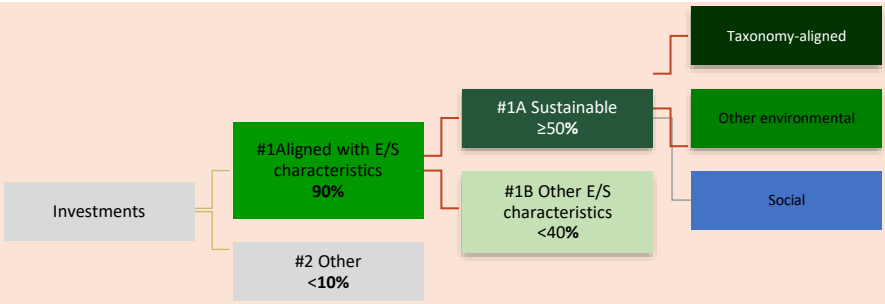
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

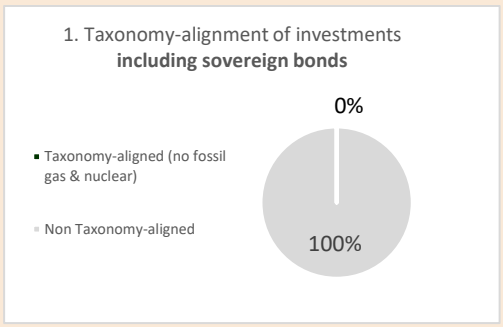
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[23]

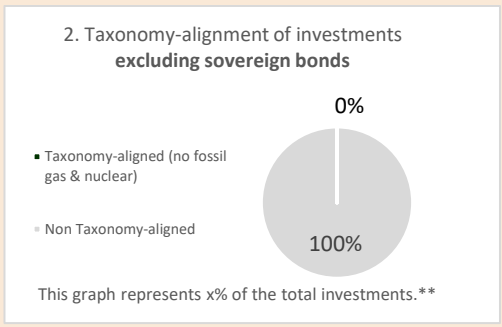
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[23] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

u) Robeco Global SDG Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global SDG Equities **Legal entity identifier:** 213800NVKQZ68I4DWL83

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☒ **Yes** ●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 1%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It will make a minimum of **sustainable investments with a social objective: 50%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

What is the sustainable investment objective of this financial product?

The Sub-fund's sustainable investment objective is to advance the United Nations Sustainable Development Goals (UN SDGs) by investing in companies whose business models and operational practices are aligned with targets defined by the 17 UN SDGs.

Sub-fund does not have a carbon-reduction objective and there is no reference benchmark designated for the purpose of attaining the sustainable objective promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions

Robeco Global SDG Equities is an actively managed fund that invests globally in companies that take action to advance the UN Sustainable Development Goals. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions,

based on factors such as investment objectives and risk tolerance.

Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

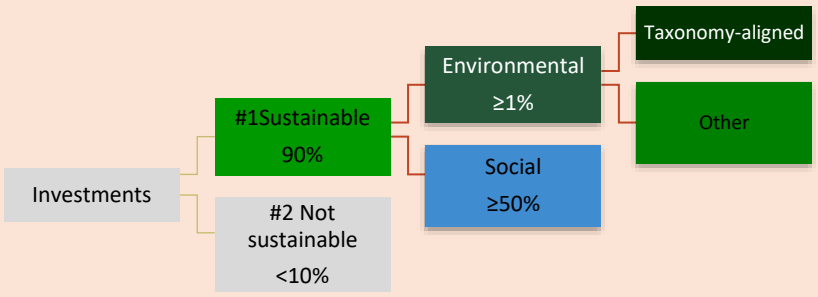
1. The Sub-fund solely invests in companies with a positive SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

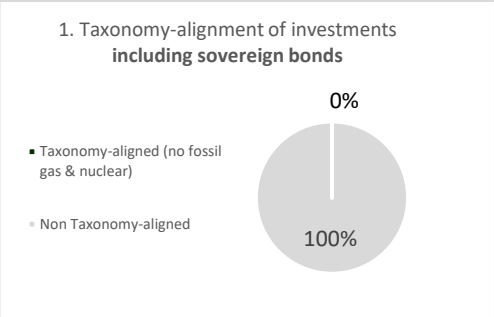
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[24]?

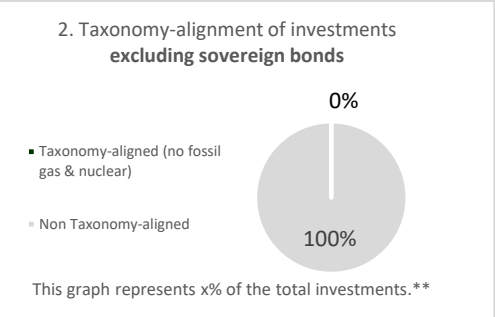
☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No



[24] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 1%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 50% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Not applicable.

v) Robeco Global Engagement Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Global Engagement Equities

Legal entity identifier: 2138007Y9W8ZMOEUOL93

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes driving a clear and measurable improvement in a company's contribution to the United Nations Sustainable Development Goals (SDGs) over three to five years by performing engagement.
2. The Sub-fund promotes investments in companies that have a better score than -3 on the internally developed SDG Framework.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
4. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
5. The Sub-fund promotes adherence to the exclusion criteria from the Climate Transition Benchmark (CTB) such as investments in controversial behaviour, controversial weapons, and tobacco. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies actively engaged and successfully engaged (meeting the engagement milestones from the engagement case).
2. The proportion of companies that hold a high negative SDG score (-3) based on the internally developed SDG Framework.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of holdings and agenda items voted.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

○ Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Global Engagement Equities is an actively managed fund that invests in a concentrated selection of global stocks. Stock selection is based on fundamental analysis to invest in companies that are best able to have a clear and measurable improvement in their contribution to the United Nations Sustainable Development Goals (UN SDGs) over three to five years via active engagement, as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund actively engages with 100% of the corporate holdings in the portfolio, typically for a period of 3 to 5 years. The engagement trajectories are assessed annually, considering the progress of pre-determined objectives that focus on contributing to specific sub targets of the SDGs. Once the company in scope falls out of the universe as a result of (a) a successful engagement closure (meeting the engagement milestones from the engagement case) or (b) an unsuccessful engagement closure, then a selling strategy will be designed for divestment.
2. The Sub-fund excludes -3 SDG scores based on the internally developed SDG Framework.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusionlist.pdf.

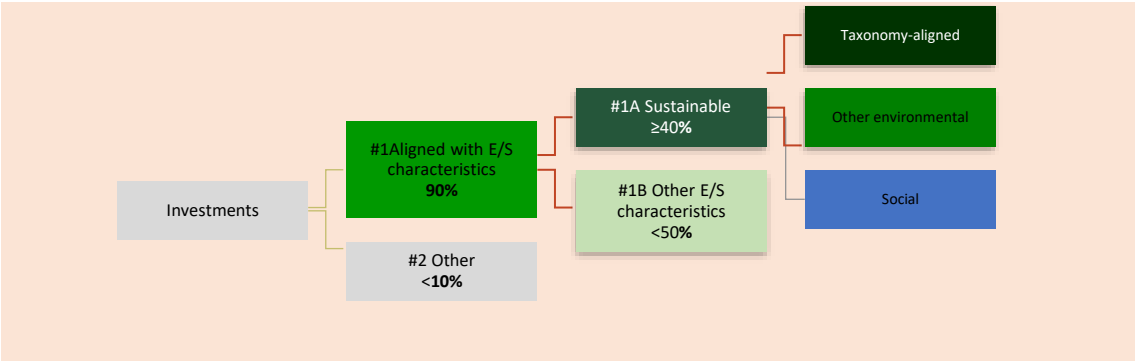
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the

green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

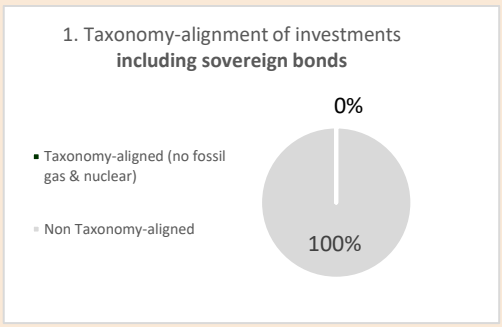
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[25]

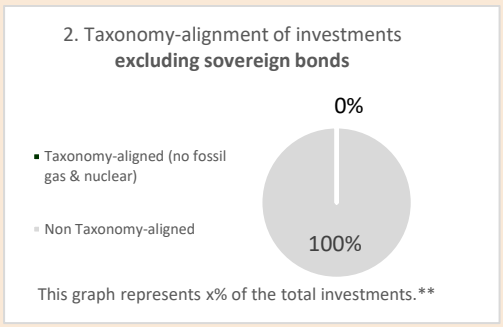
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[25] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

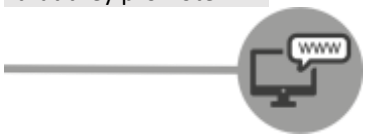
The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a

specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?



The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

w) Robeco QI Emerging Markets 3D Enhanced Index Equities II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Emerging Markets 3D Enhanced Index Equities II

Legal entity identifier: 213800G3D5YDMZG9Z661

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes**

●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
5. The Sub-fund has a substantially better weighted average ESG score than the General Market Index.
6. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
7. The Sub-fund promotes investments in companies that have a better score than -3 on the internally developed SDG Framework.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the General Market Index.
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an Elevated sustainability risk profile.
7. The proportion of companies that hold a high negative SDG score (-3) based on the internally developed SDG Framework.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco QI Emerging Markets 3D Enhanced Index Equities II is actively managed and will apply Robeco's "3D" investment strategy, which seeks to consider risk, return and sustainability in the Sub-fund's portfolio. The Sub-fund's portfolio will be optimised using a quantitative process to target returns in excess of the Benchmark, to target better sustainability characteristics than the Benchmark, while managing risk compared to the Benchmark.
The Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
2. The Sub-fund's weighted Carbon footprint is at least 30% better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are at least 20% better than that of the General Market Index.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
5. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.
6. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

7. The Sub-fund excludes all companies with high negative SDG scores (-3) based on the internally developed SDG Framework.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

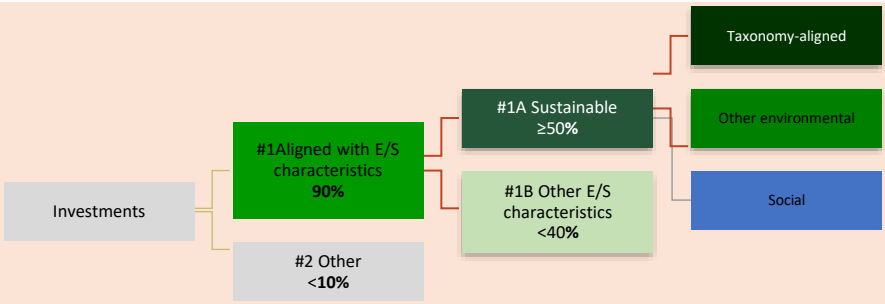
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

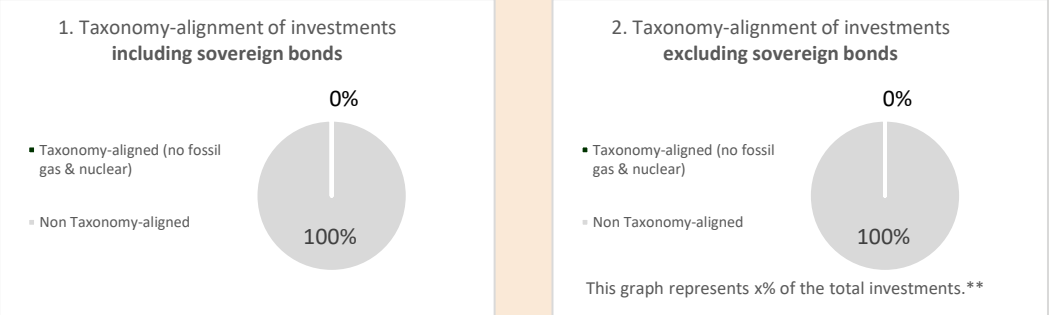
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[26]

☐ Yes

☐ In fossil gas ☐ In nuclear energy

[26] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

✖ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*
*** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.*

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-

fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

- Robeco's sustainability risk policy https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf

x) Robeco Emerging Markets Ex China Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Emerging Markets Ex China Equities

Legal entity identifier: 213800CM8YS7HH6MXS55

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**

☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

o Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Emerging Markets ex China Equities is an actively managed fund that invests in stocks in Emerging Countries across the world with the exception of China. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

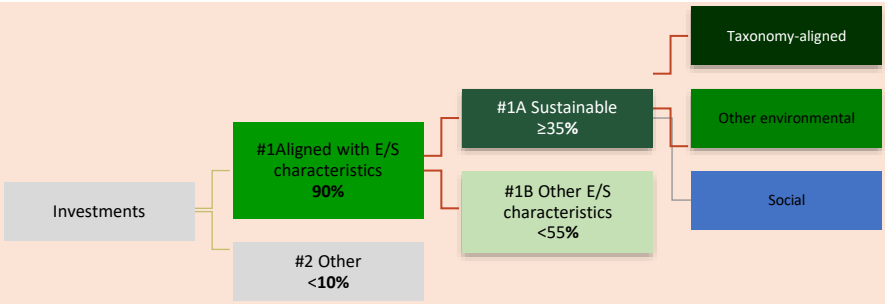
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

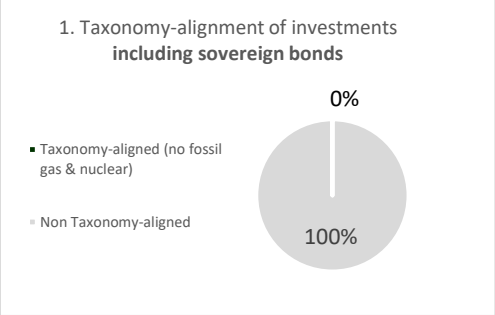
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

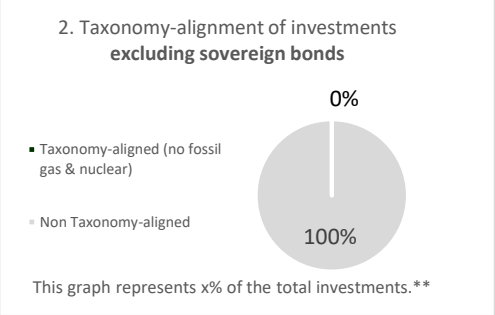
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[27]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%. Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[27] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

y) Robeco Emerging Markets Climate Transition Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Emerging Markets Climate Transition Equities

Legal entity identifier: 2138008JOR5BVQBE8C96

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%** ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investments in companies that contribute to the climate transition. These Transition-related Investments are identified to be making and/or enabling the transitional efforts required to limit global temperature increase to well-below 2°C degrees, aligned with the goals of the Paris Agreement.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes adherence to the exclusion criteria from the Climate Transition Benchmark (CTB) such as investments in controversial behavior, controversial weapons, and tobacco. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities identified as Transition-related Investments contributing to the climate transition.
   More information on the identification of Transition-related Investments is included in the Glossary of Defined Terms section of this Prospectus.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

o Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Emerging Markets Climate Transition Equities is an actively managed Sub-fund that invests in equities in Emerging Countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund invests at least 80% of the portfolio in Transition-related Investments contributing to the climate transition:
   a. Investments making the transition: entities identified having credible emission reduction targets, aligning with the goals of the Paris Agreement, and which demonstrate the credibility of those targets. The assessment takes into consideration the company's projected emissions alignment with its required sector decarbonization pathway under a well-below 2°C scenario (regionally adjusted where needed) and whether the company's targets are verified and contain a credible transition plan for achieving its emission-reduction goals. Eligible investments have an 'Aligned' or 'Aligning' Robeco Climate Traffic Light assessment that indicates a credible emissions reduction pathway.
   b. Investments enabling the transition: entities that are involved in activities such as products, technologies and services, that are needed to make the transition possible. Eligible entities meet measurable KPIs related to product groups or operational activities that Robeco considers to accelerate the decarbonization of the economy, measured through the Robeco SDG Framework, which identifies to what extent a company contributes to the concrete sub-targets set out by the SDGs. Eligible investments hold a positive score on SDG 7 and/or SDG 13, based

on the Robeco SDG Framework, indicating companies that provide solutions to enable climate change mitigation.

2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

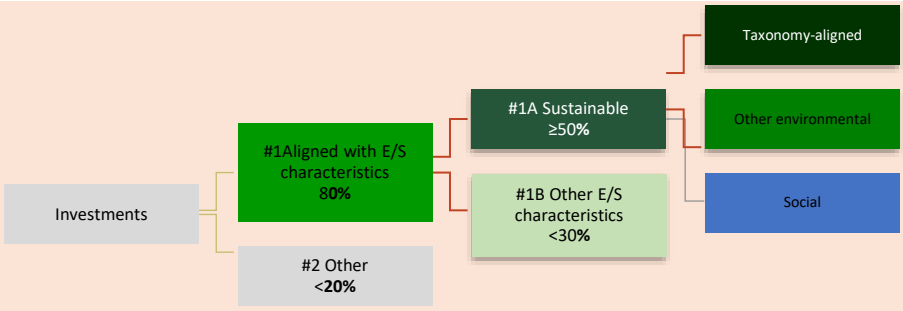
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

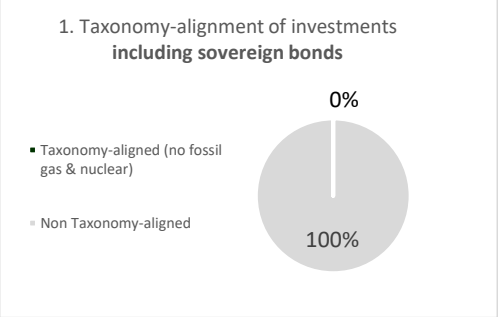
To comply with the EU Taxonomy, the criteria for **fossil gas**

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[28]

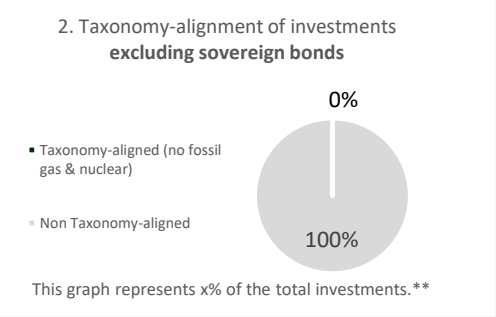
[28] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.



Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11

(Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

z) Robeco Sustainable Global Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Global Stars Equities

Legal entity identifier: TBD

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
3. The Sub-fund promotes having a substantially lower Carbon footprint than the general market index, referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
6. The Sub-fund promotes investment in at least half of its portfolio in holdings that contribute to the UN Sustainable Development Goals (SDGs).
7. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings and agenda items voted.
3. The Sub-fund's weighted Carbon footprint score compared to the General Market Index.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The % of holdings with an Elevated sustainability risk profile.
6. The % of portfolio holdings with a positive SDG score based on the internally developed SDG Framework.
7. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-

step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.
Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.
Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.
The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.
Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Sustainable Global Stars Equities is an actively managed fund that invests in stocks in developed countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
2. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
3. The Sub-fund's weighted Carbon footprint score is 20% better than that of the General Market Index.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-

policy.pdf). The Sub-fund is limited to a maximum exposure of 2% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

6. The Sub-fund invests at least 50% of its portfolio in companies that hold a positive SDG score based on the internally developed SDG Framework.
7. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

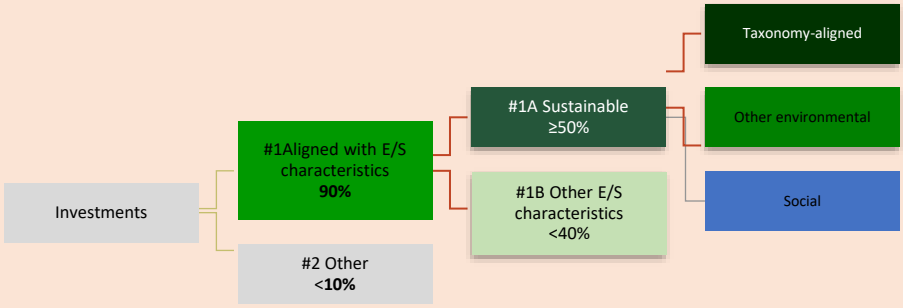
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.
The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category as described below.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

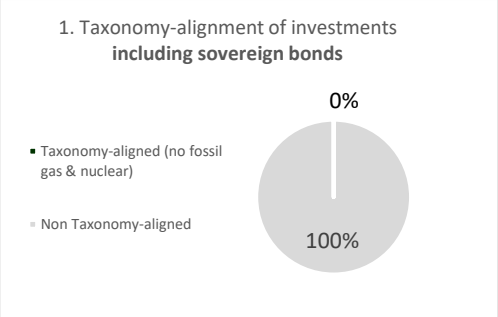
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[29]?

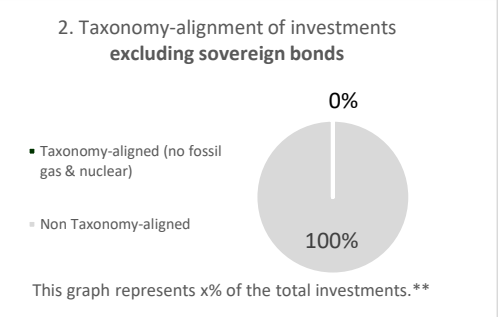
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[29] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?
0%.

are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?
The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under ''#2 Other'' and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category ''#2 Other'', for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

aa) Robeco QI Global Enhanced Index Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Enhanced Index Equities

Legal entity identifier: 213800715456NTW55Q58

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**

- ☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ **No**

- ☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
  - ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with a social objective
- ☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.
7. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).
7. The number of holdings and agenda items voted.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to society and environment. Further, the operational processes involved in creating such products are checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between

high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.
Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.
Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.
The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.
Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco QI Global Enhanced Index Equities is an actively managed fund that invests in stocks of companies globally. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.
7. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

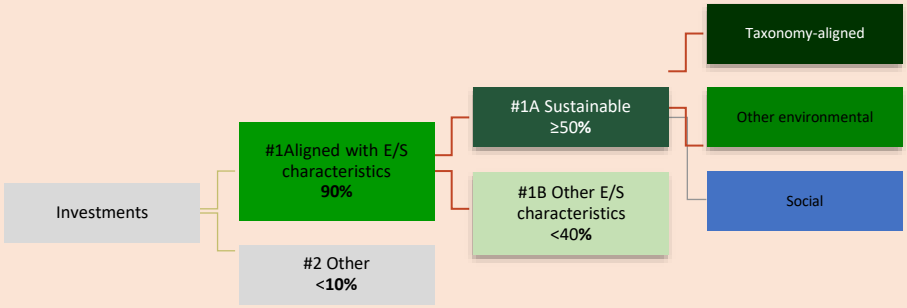
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

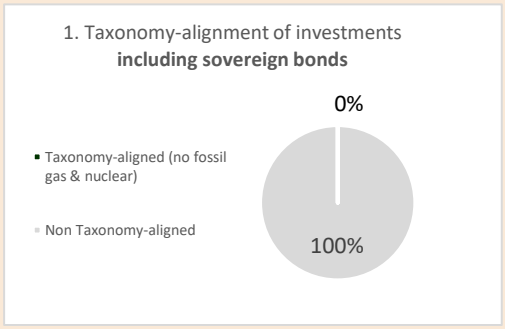
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[30]

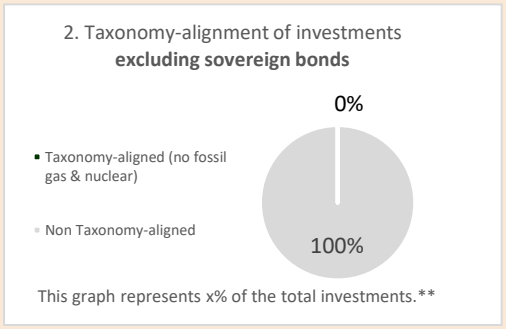
[30] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.



Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Where can I find more product specific information online?

bb) Robeco QI Emerging Markets Enhanced Index Equities Plus

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Emerging Markets Enhanced Index Equities Plus

Legal entity identifier: 213800ZDALBDFQMLN133

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to society and environment. Further, the operational processes involved in creating such products are checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between

high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.
Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.
Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.
The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.
Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco QI Emerging Markets Enhanced Index Equities Plus is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.
The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

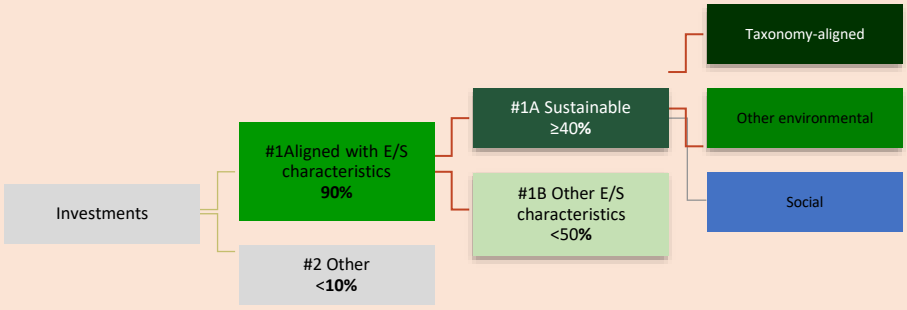
1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?



Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.
The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for

hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

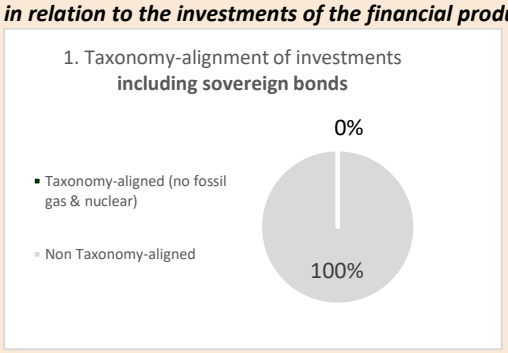
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

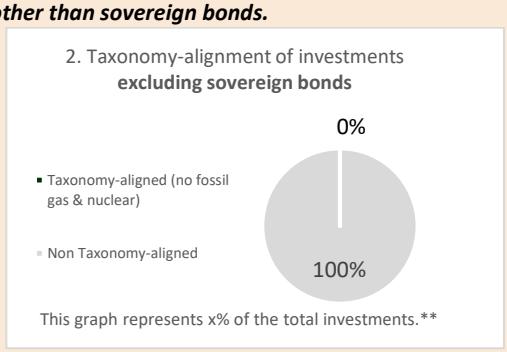
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[31]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[31] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

cc) Robeco All Country Global Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco All Country Global Stars Equities **Legal entity identifier:** 213800VKPVVQTESDP655

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund promotes having a lower Carbon footprint than the general market index, referred to in Appendix VI – Benchmarks (the "General Market Index").
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The Sub-fund's weighted Carbon footprint compared to the General Market Index.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.
Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.
Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.
The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.
Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)

- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco All Country Global Stars Equities is an actively managed fund that invests in stocks in all countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 2% to investments with an Elevated

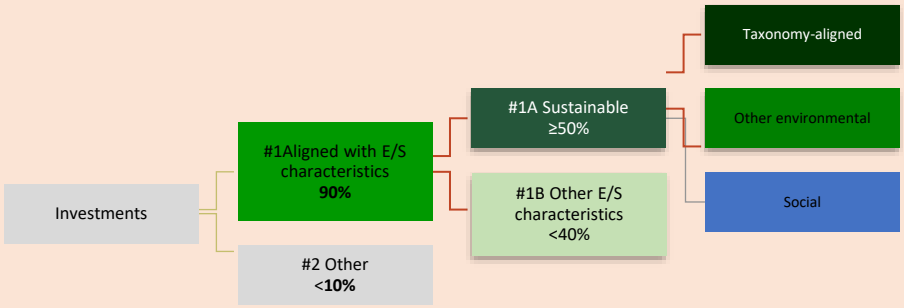
sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.



Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.
The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category as described below.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

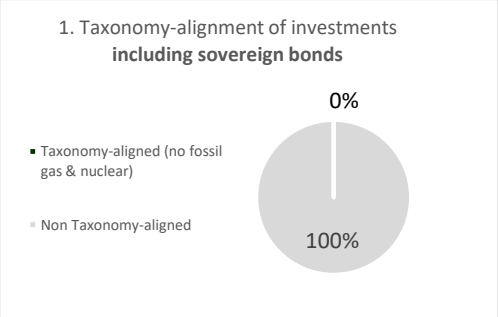
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

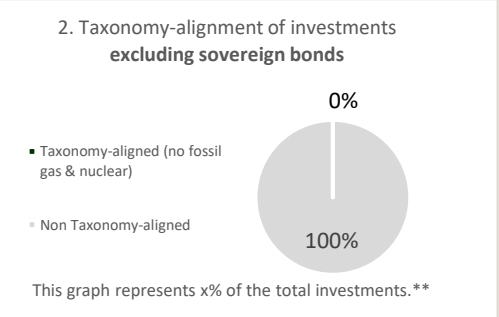
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[32]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[32] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under ''#2 Other'' and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category ''#2 Other'', for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial

Not applicable.

product attains the environmental or social characteristics that they promote.

dd) Robeco NextGen High Dividend Capture

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco NextGen High Dividend Capture

Legal entity identifier: TBD

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

● ● ☐ **Yes**

● ○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework

based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.
The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.
Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:
- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:
- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco NextGen High Dividend Capture is an actively managed fund that invests in stocks in developed countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

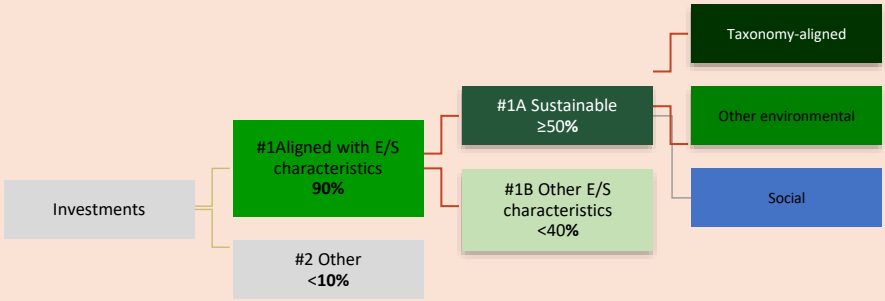
Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.



At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

turnover reflecting the share of revenue from green activities of investee companies

capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

operational expenditure (OpEx) reflecting green

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

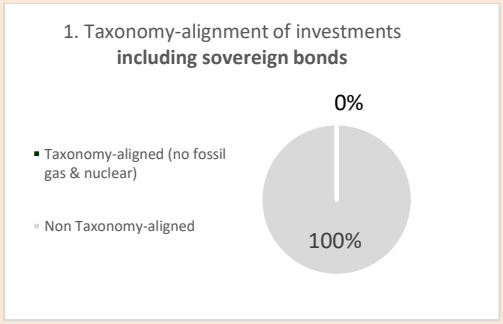
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

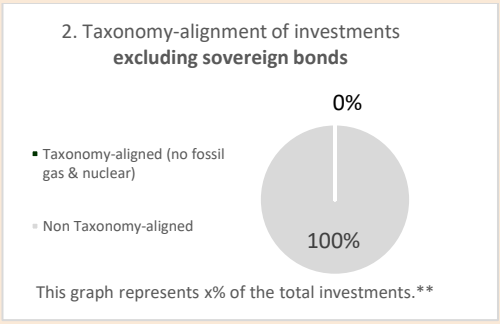
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[33]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[33] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

2. REGIONAL & COUNTRY EQUITY SUB-FUNDS

a) Robeco Asia-Pacific Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Asia-Pacific Equities **Legal entity identifier:** 213800R6QI6SB393PI50

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

o Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Asia-Pacific Equities is an actively managed fund that invests in stocks in developed and emerging Asian-Pacific countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

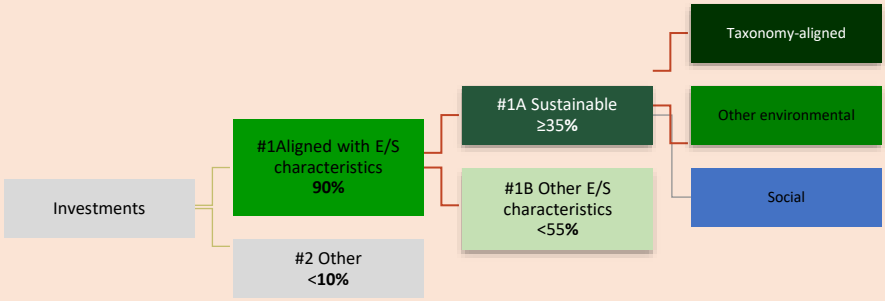
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

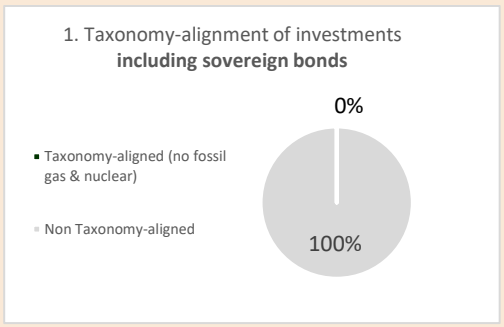
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[34]

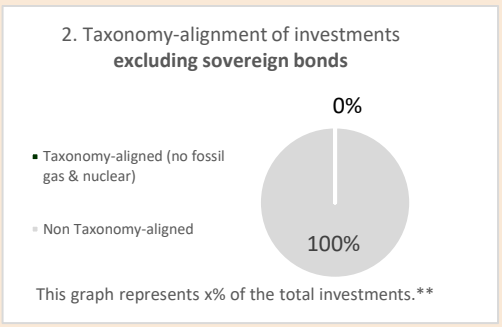
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[34] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

b) Robeco European Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco European Stars Equities

Legal entity identifier: 21380089E1HSI8JRUS47

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The Sub-fund's weighted Carbon footprint compared to the General Market Index.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)

- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco European Stars Equities is an actively managed fund that invests in equities of companies that are domiciled in Europe. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 2% to investments with an Elevated

sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

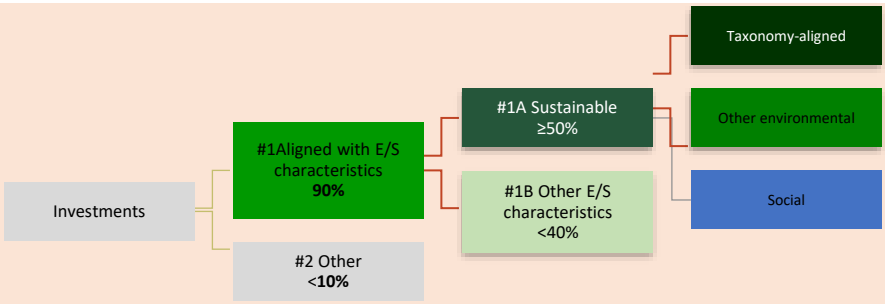
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

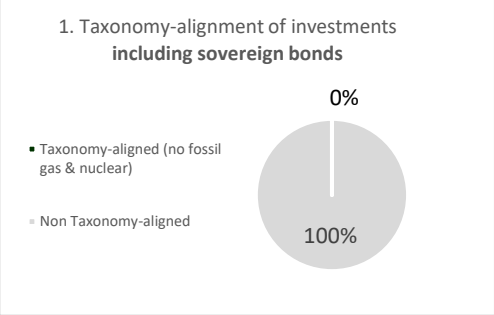
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

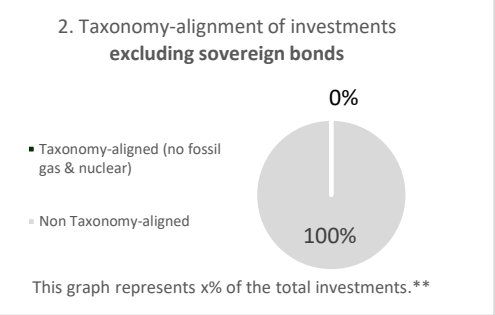
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[35]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG

[35] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

c) Robeco QI European Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI European Conservative Equities

Legal entity identifier: 2138001XRMBVMGLO9954

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-

step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

o Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco QI European Conservative Equities is an actively managed fund that invests in low-volatility stocks in European countries. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

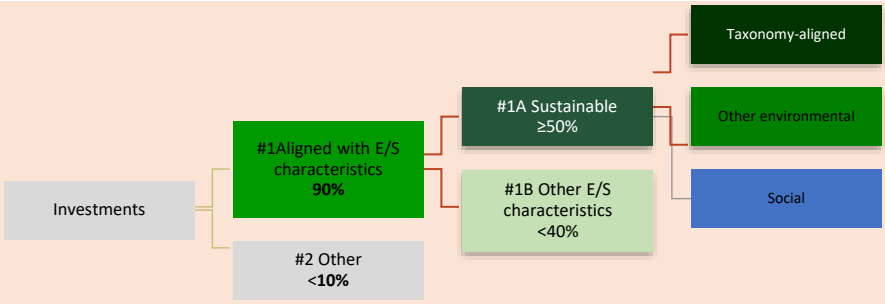
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

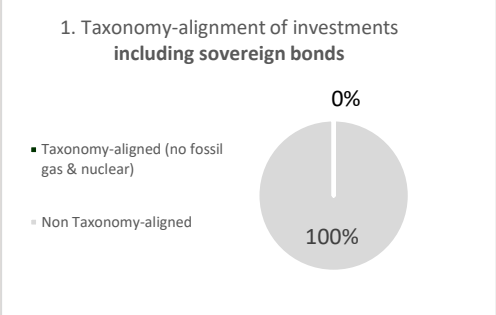
0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include

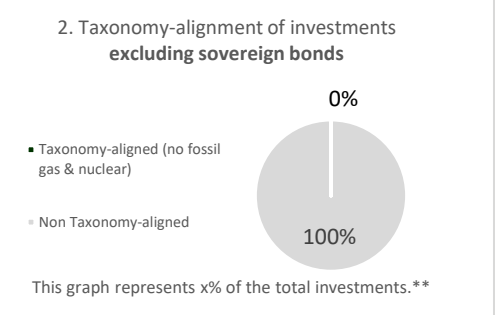
Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[36]

☐ Yes

☐ In fossil gas ☐ In nuclear energy



☒ No



comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

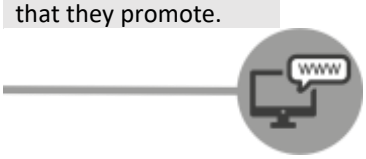
What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable

[36] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?



The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

d) Robeco BP US Premium Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco BP US Premium Equities

Legal entity identifier: 213800NHT998V29TM914

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco BP US Premium Equities is an actively managed fund that invests in stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

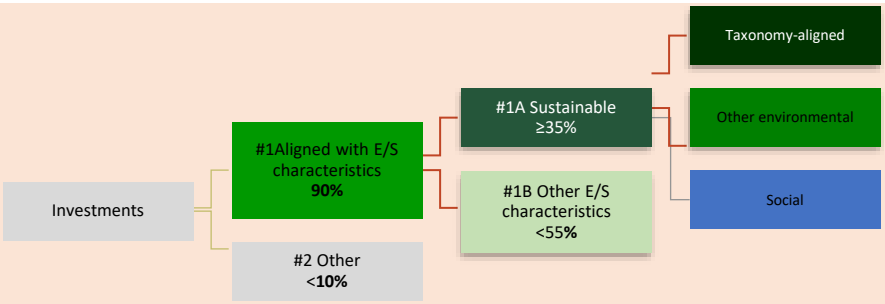
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational**

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

expenditure (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

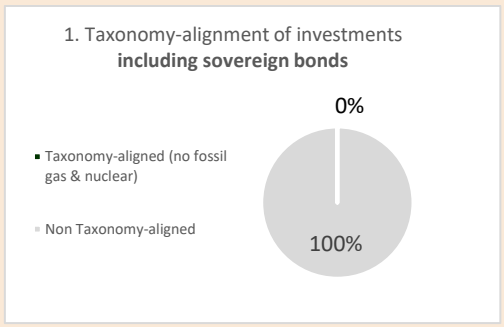
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[37]

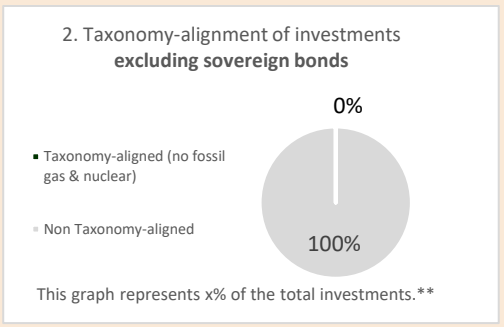
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[37] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%

are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

e) Robeco Chinese Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Chinese Equities **Legal entity identifier:** 213800TJUGS6VH4REL60

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

o Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Chinese Equities is an actively managed fund that invests in listed stocks of leading Chinese companies. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

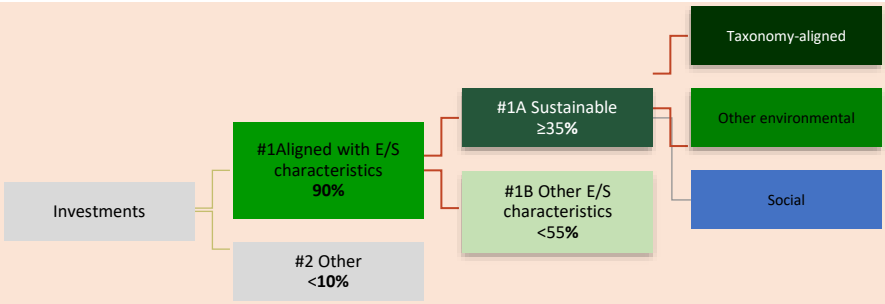
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

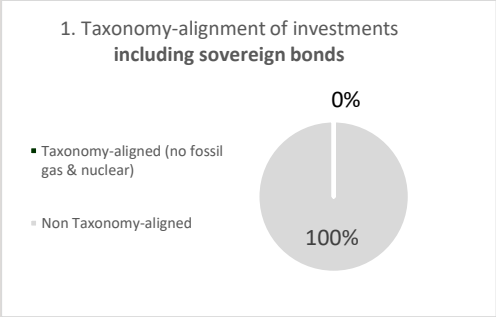
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

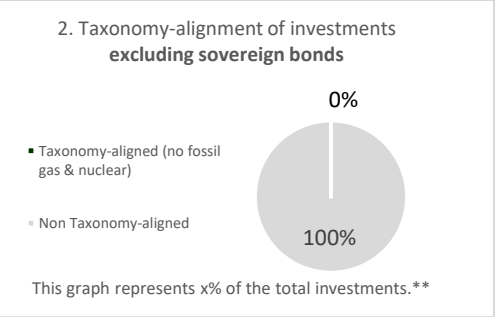
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[38]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[38] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

f) Robeco Indian Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Indian Equities **Legal entity identifier:** 213800F2XL8JYTIUE403

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

o Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Indian Equities is an actively managed fund that invests in stocks listed on the major Indian stock exchanges. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

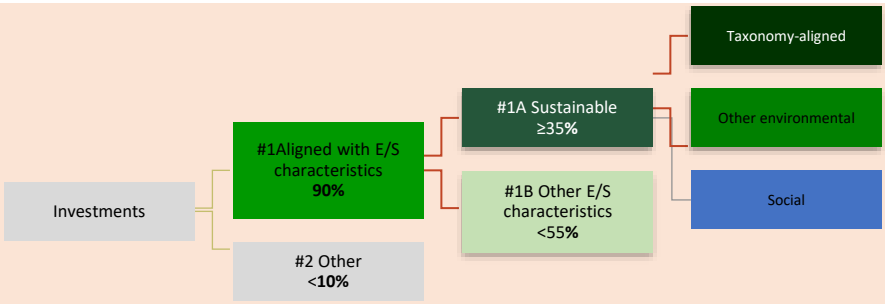
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

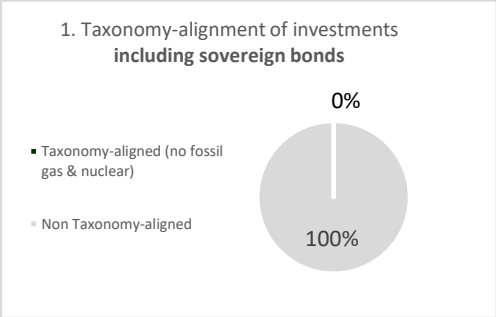
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

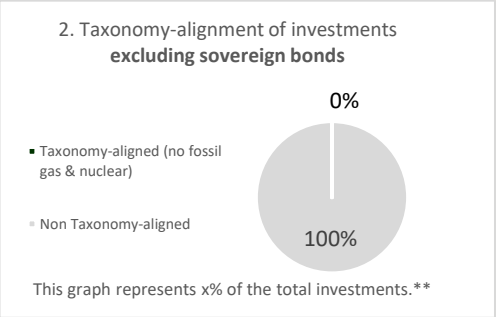
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[39]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

*** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.*

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

[39] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Where can I find more product specific information online?

More product-specific information can be found on the website:

g) Robeco Asian Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Asian Stars Equities **Legal entity identifier:** 213800G5JUR75POVU193

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

o Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Asian Stars Equities is an actively managed fund that invests in stocks of the most attractive companies in Asia. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

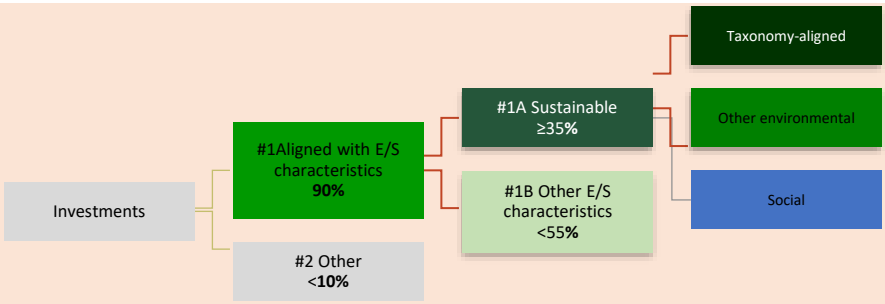
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

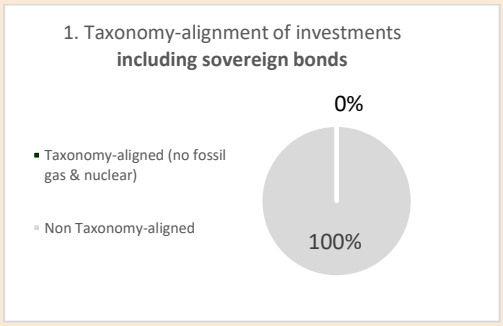
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

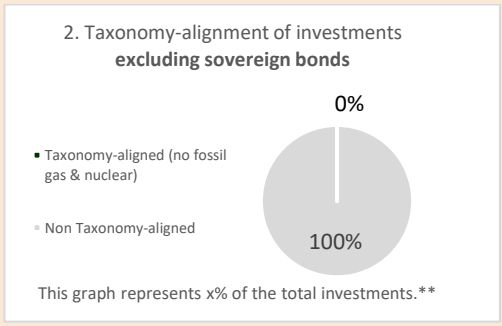
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[40]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[40] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

h) Robeco Sustainable Asian Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Asian Stars Equities

Legal entity identifier: 213800C3QE3BF5TD6K08

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
6. The Sub-fund promotes investment in at least half of its portfolio in holdings that contribute to the UN Sustainable Development Goals (SDGs).
7. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings and agenda items voted.
3. The Sub-fund's weighted Carbon footprint compared to the General Market Index.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The % of holdings with an Elevated sustainability risk profile.
6. The % of portfolio holdings with a positive SDG score based on the internally developed SDG Framework.
7. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework

based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)

- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Sustainable Asian Stars Equities is an actively managed fund that invests in stocks of the most attractive companies in Asia. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
3. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

6. The Sub-fund invests at least 50% of its portfolio in companies that hold a positive SDG score based on the internally developed SDG Framework.
7. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

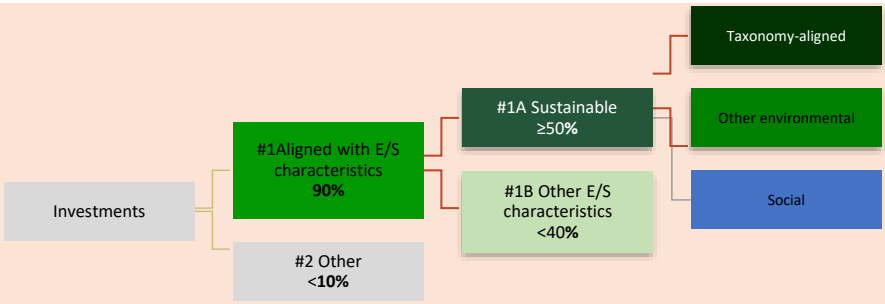
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

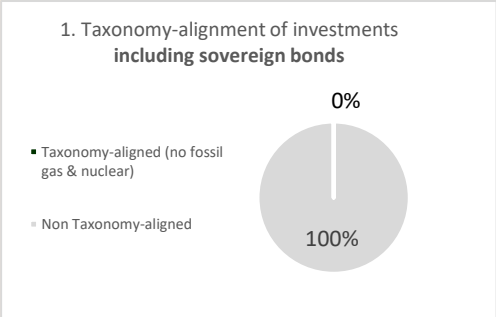
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

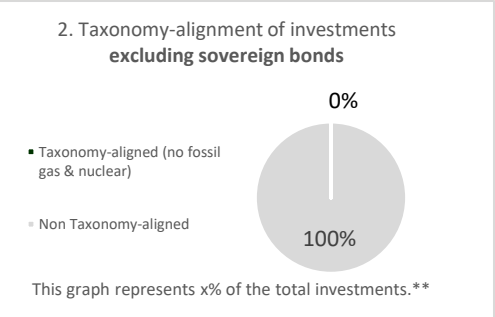
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[41]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[41] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

i) Robeco BP US Large Cap Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco BP US Large Cap Equities

Legal entity identifier: 213800JOQ7MWBS9GH642

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an

ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco BP US Large Cap Equities is an actively managed fund that invests in large-cap stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

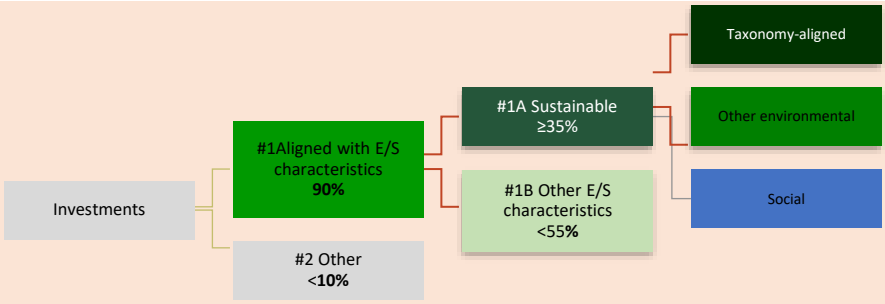
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

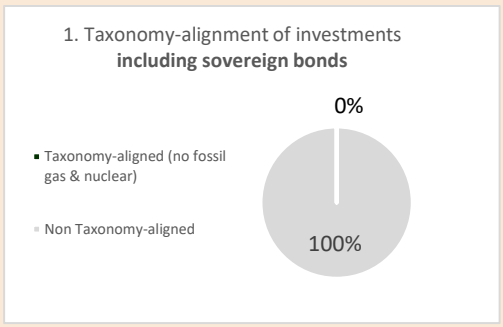
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[42]

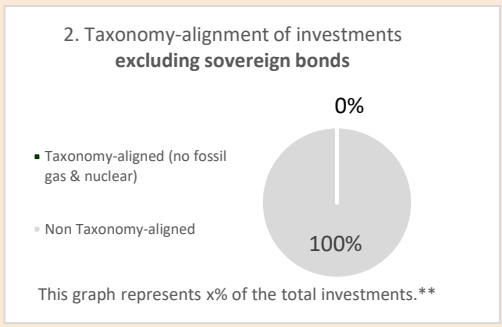
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[42] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:
https://www.robeco.com/en/funds/

j) Robeco BP US Select Opportunities Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco BP US Select Opportunities Equities

Legal entity identifier: 213800YIJJ667CDPK983

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an

ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco BP US Select Opportunities Equities is an actively managed fund that invests in mid-cap stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

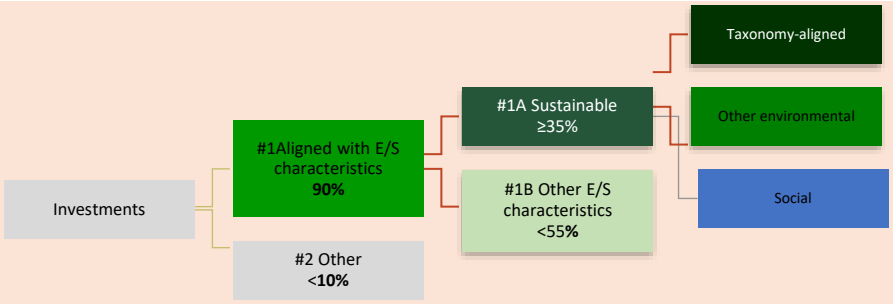
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

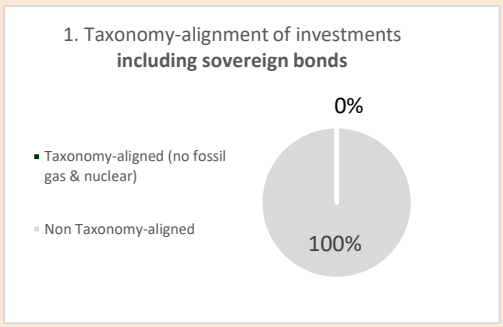
0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

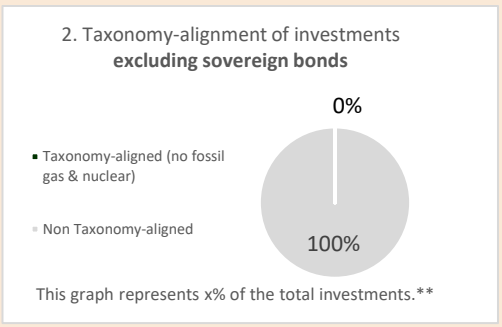
Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[43]

☐ Yes

☐ In fossil gas ☐ In nuclear energy



☒ No



[43] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

k) Robeco Chinese A-share Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Chinese A-share Equities

Legal entity identifier: 213800GE9C6GVRJ3AM62

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes having a lower Carbon footprint than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.
5. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Chinese A-share Equities is an actively managed fund that invests in Chinese A-shares. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 20% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.
5. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.

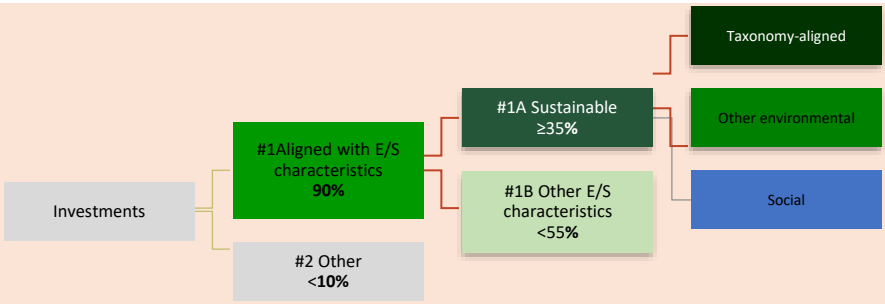
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

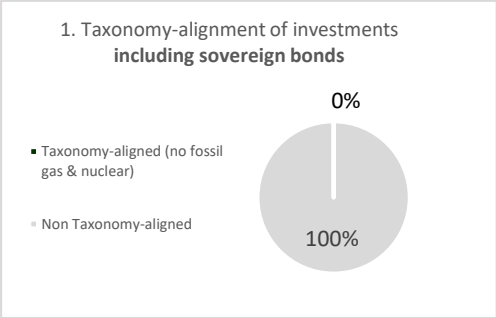
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

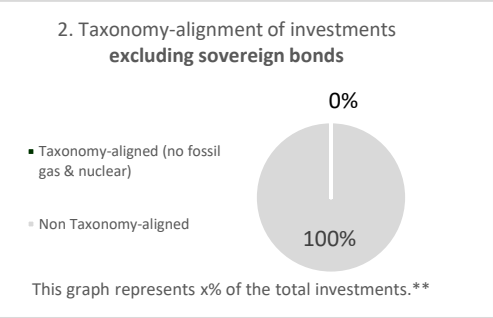
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[44]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[44] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

I) Robeco QI Chinese A-share Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Chinese A-share Active Equities

Legal entity identifier: 213800OARI6HPJH22T56

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
6. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
7. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
5. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-

step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco QI Chinese A-share Active Equities is an actively managed fund that invests in stocks of companies with an A-share listing in mainland China. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.
The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
3. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
4. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
5. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

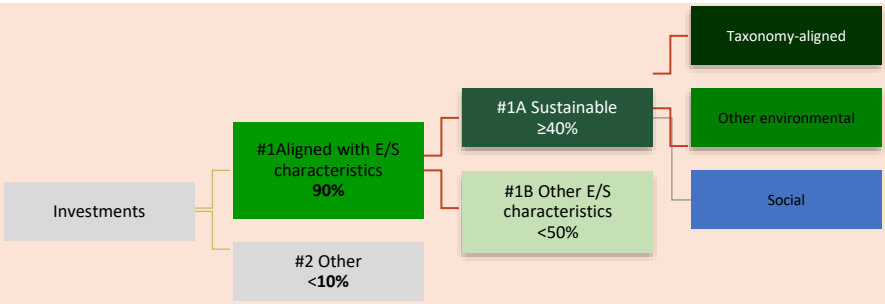
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

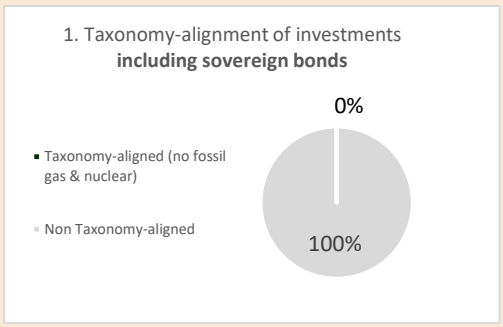
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[45]

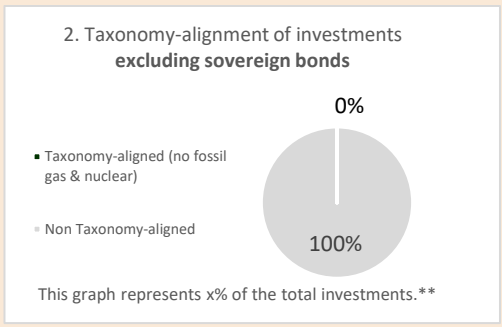
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[45] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

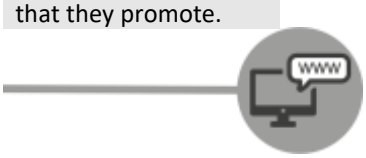
The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum

share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?



The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

m) Robeco QI Chinese A-share Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Chinese A-share Conservative Equities

Legal entity identifier: 213800XWLW8UPEKC9R39

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco QI Chinese A-share Conservative Equities is an actively managed fund that invests in low-volatility stocks of companies with an A-share listing in mainland China. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.
The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

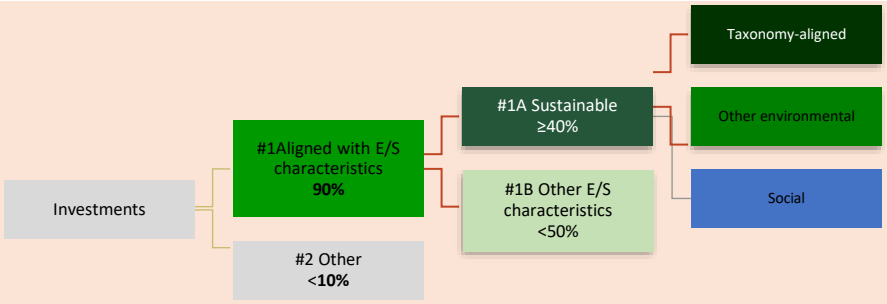
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

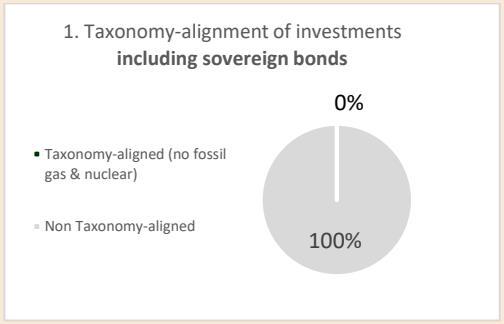
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

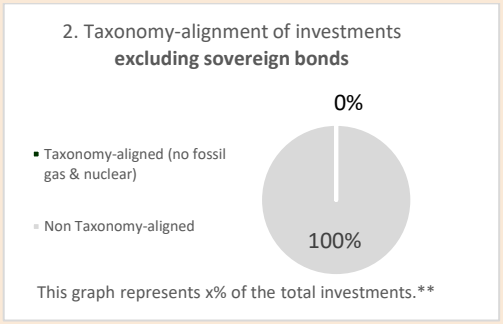
Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[46]

☐ Yes

☐ In fossil gas ☐ In nuclear energy



☒ No



To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*
*** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.*

[46] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

https://www.robeco.com/en/funds/

n) Robeco QI European Value Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI European Value Equities

Legal entity identifier: 213800SX488DS47PZG42

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco QI European Value Equities is an actively managed fund that invests in stocks in European countries. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

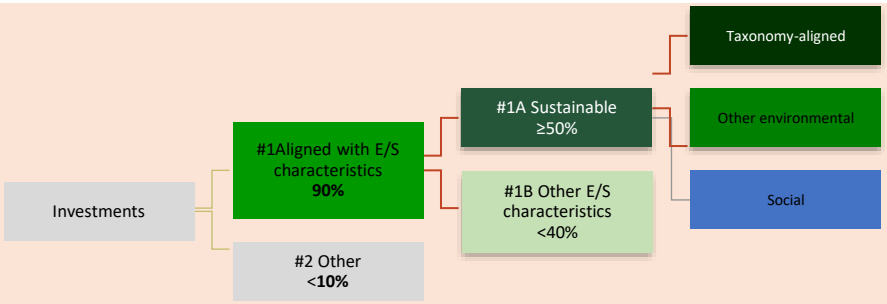
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

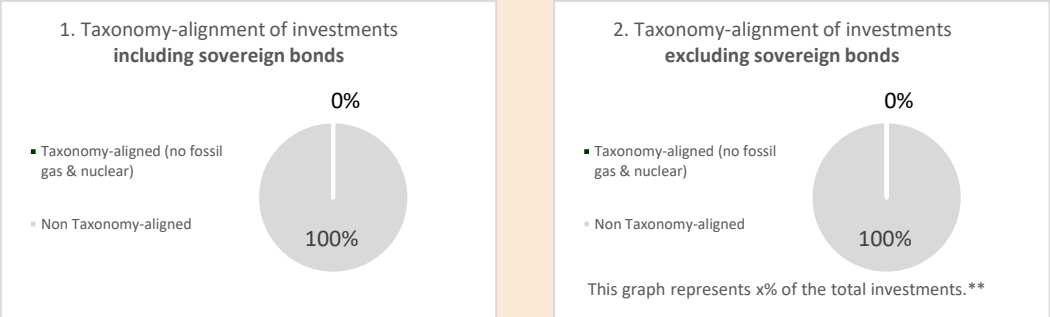
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[47]

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[47] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective **that do not take into account** the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

o) Robeco QI US Beta Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI US Beta Equities **Legal entity identifier:** 2138002ROX4K9YH3D187

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 60% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes having a substantially lower corporate Carbon Footprint than the General Market Index.
2. The Sub-fund promotes having a substantially lower Water and Waste footprint than the General Market Index.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and fossil fuels.
4. The Sub-fund has a substantially better weighted average ESG score than the general market index.
5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.
6. The Sub-fund promotes investments in companies that have a better score than -3 on the internally developed SDG Framework.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted corporate Carbon Footprint compared to the footprint of the General Market Index.
2. The Sub-fund's weighted Water and Waste footprint scores compared to the footprint of the General Market Index.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion policy.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).
6. The number of holdings and agenda items voted.
7. The proportion of companies that hold a high negative SDG score (-3) based on the internally developed SDG Framework.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals, that have both social and environmental objectives. Robeco uses its proprietary SDG Framework and related SDG scores to determine which issuers constitute a sustainable investment as referred to in art 2(17) SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024- en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. For sustainable investments, the PAI indicators have been taken into account by ensuring that the investments do no significant harm to any environmental or social objective. For this purpose, many PAI indicators are either directly or indirectly included in Robeco's SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

○ Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1).
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the product page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The Sub-fund is an actively managed fund that invests in equities of companies in the Unites States of America. The selection of these stocks is based on a quantitative model as described in the investment policy paragraph in Appendix I of this prospectus.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Beta stands for the investment management approach of the Sub-fund that follows the sole purpose of pursuing the sustainable investment objective of the Sub-fund. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's SDG framework, Robeco's good governance policy and considers Principal Adverse Impacts in the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted Carbon footprint is 50% better than that of the General Market Index .
2. The Sub-fund's weighted Water and Waste footprints are at least 20% better than that of the General Market Index.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 10% better than that of the General Market Index, measured as a ratio.
6. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
7. The Sub-fund excludes all companies with high negative SDG scores (-3) based on the internally developed SDG Framework.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

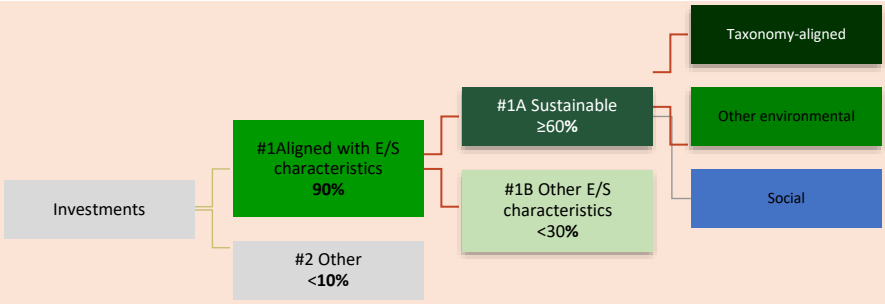
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 60% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an environmental objective but it cannot be ruled out that sustainable investments may include those with an environmental objective. The investments in the category Other, estimated between 0-10%, are mostly in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

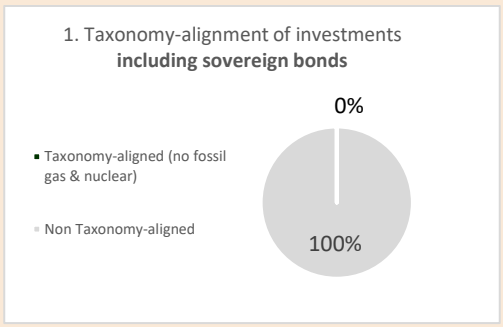
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[48]

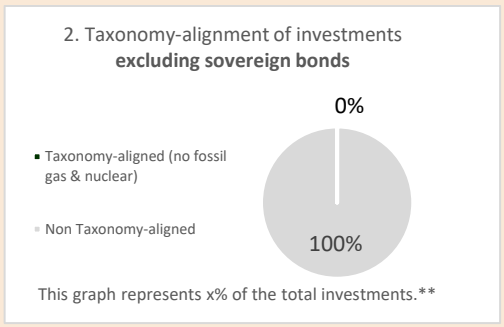
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[48] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, the Sub-fund does not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6

(Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

p) Robeco QI European Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI European Active Equities

Legal entity identifier: 213800SATZYOKMAPLJ87

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes**

- ☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ It will make a minimum of **sustainable investments with a social objective:** ___%

●○ ☒ **No**

- ☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
  - ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with a social objective
- ☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco QI European Active Equities is an actively managed fund that invests in stocks of companies in Europe. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

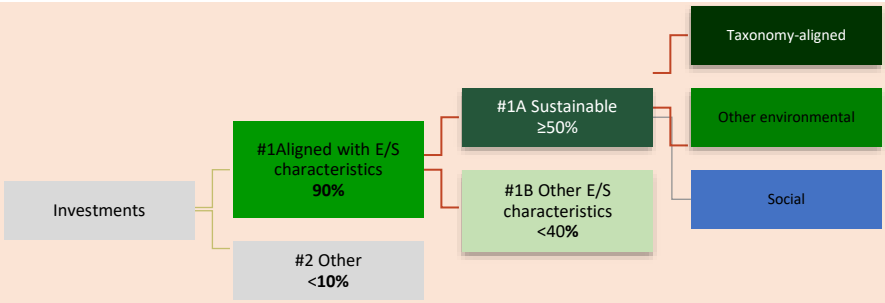
1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.



Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

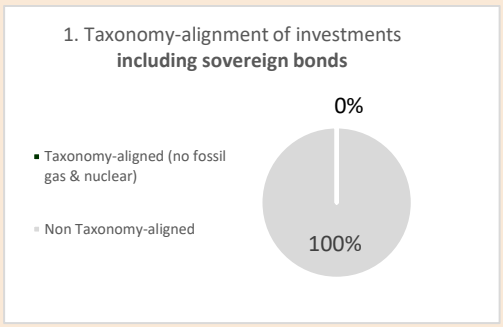
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[49]

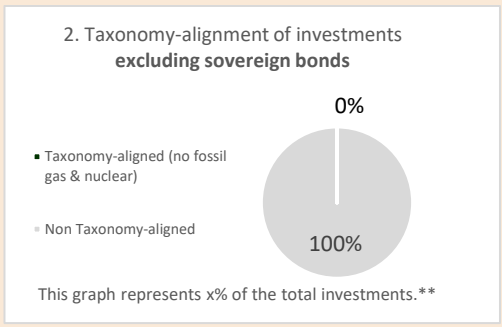
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[49] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a

specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

3. THEME EQUITY SUB-FUNDS

a) Robeco New World Financials

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco New World Financials

Legal entity identifier: 213800WE9J7OV8DOET07

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes having a lower Carbon footprint than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.
5. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco New World Financials is an actively managed fund that invests in equities from developed and Emerging Countries all over the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

5. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

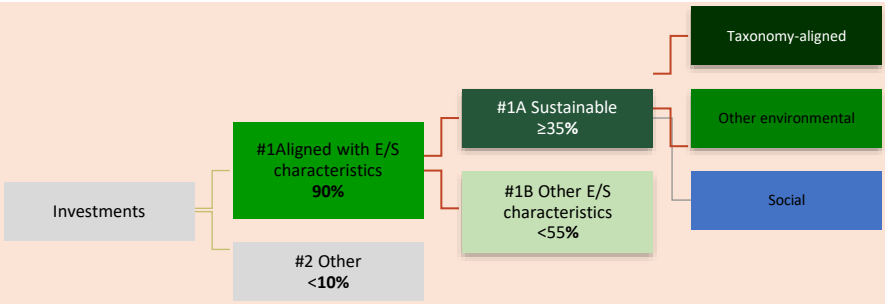
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

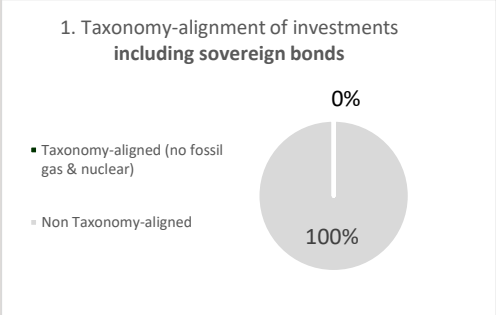
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

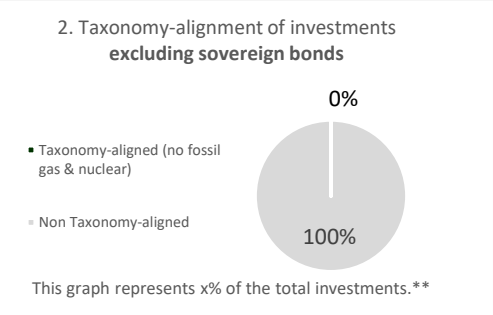
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[50]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*
*** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.*

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

[50] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Where can I find more product specific information online?

More product-specific information can be found on the website:

b) Robeco Sustainable Property Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Property Equities

Legal entity identifier: 2138003BSHS5NJ9EBX10

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
3. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
6. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings and agenda items voted.
3. The Sub-fund's weighted Carbon footprint compared to the General Market Index.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The % of holdings with an Elevated sustainability risk profile.
6. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive

(+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Sustainable Property Equities is an actively managed fund that invests in stocks in developed countries across the world. The selection of these stocks is based on fundamental analysis. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

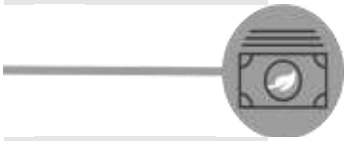
The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
3. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The

Sub-fund is limited to a maximum exposure of 2% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

6. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?



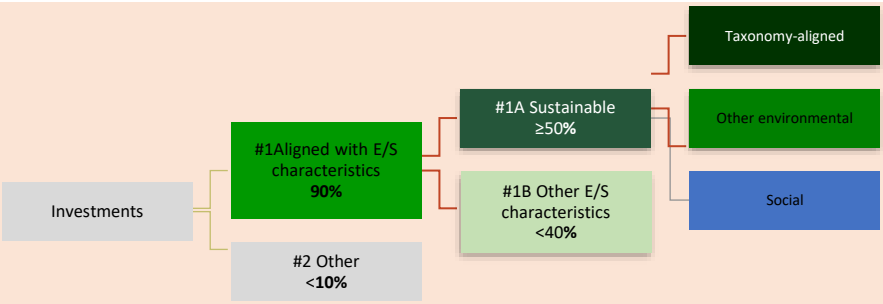
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

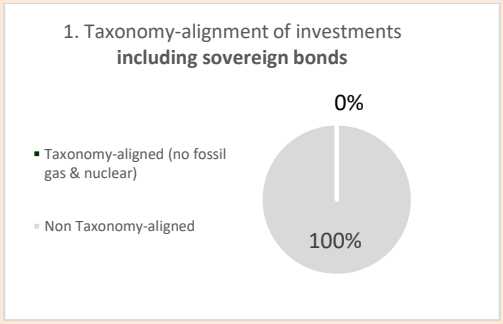
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

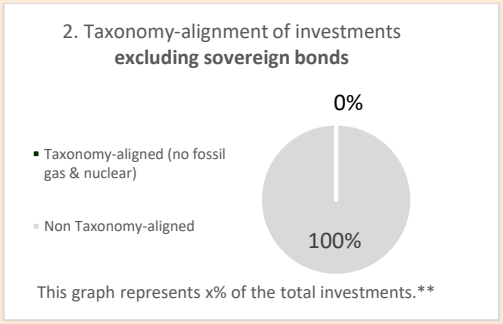
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[51]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[51] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

c) Robeco Global Consumer Trends

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Consumer Trends

Legal entity identifier: 213800PFG7CLST9A1742

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes**

- ☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ It will make a minimum of **sustainable investments with a social objective:** ___%

●○ ☒ **No**

- ☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
  - ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with a social objective
- ☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Global Consumer Trends is an actively managed fund that invests in stocks in developed and Emerging Countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-

policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

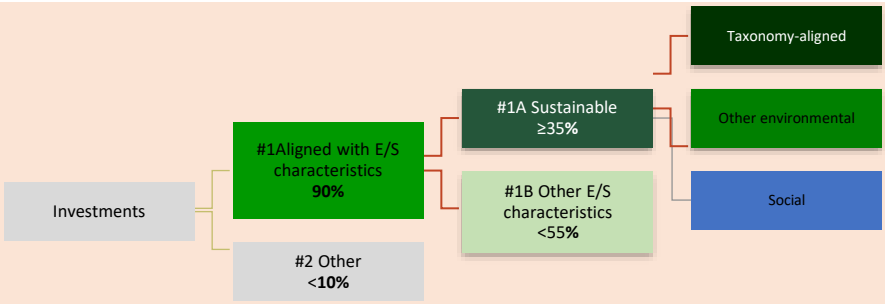
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

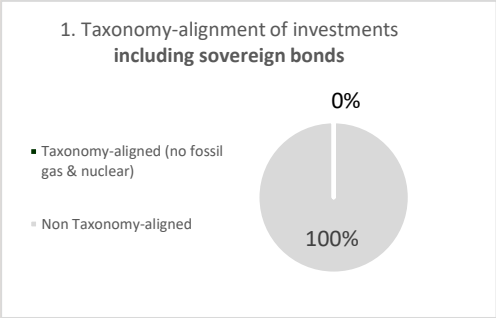
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

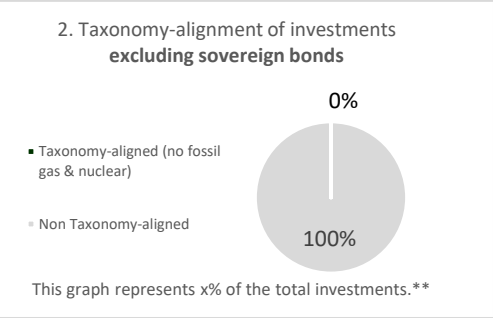
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[52]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[52] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under ''#2 Other'' and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category ''#2 Other'', for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:
https://www.robeco.com/en/funds/

- Robeco's PAI Statement can be accessed via the following link: https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf
- Robeco's Good Governance test can be accessed via the following link: https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf
- Robeco's SDG framework https://www.robeco.com/docm/docu-robeco-explanation-sdg-framework.pdf
- Robeco's sustainability risk policy https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf

d) Robeco Global Multi-Thematic

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Multi-Thematic

Legal entity identifier: 2138006ECAW1JTNY4V89

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes having a lower Carbon footprint than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").
6. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.
5. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
6. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework

based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

o Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Global Multi-Thematic is an actively managed fund that invests worldwide in equities from developed and Emerging Countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.
5. The Sub-fund's weighted Carbon footprint is 20% better than that of the General Market Index.
6. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

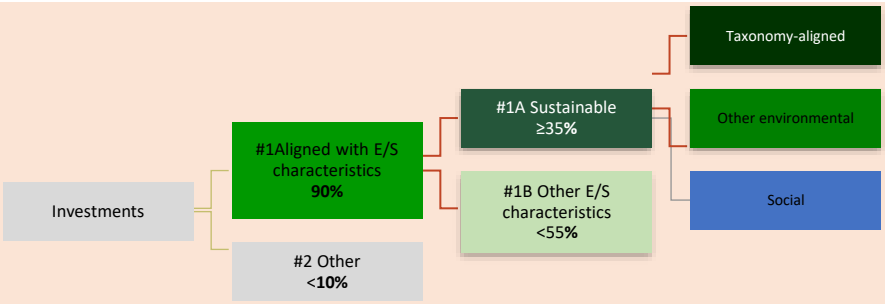
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

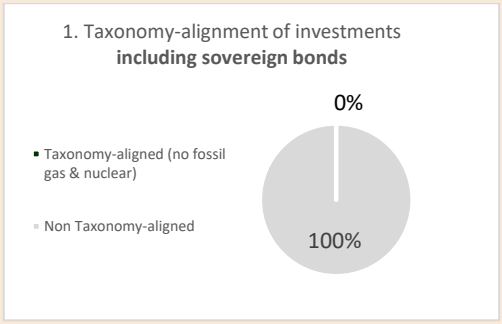
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

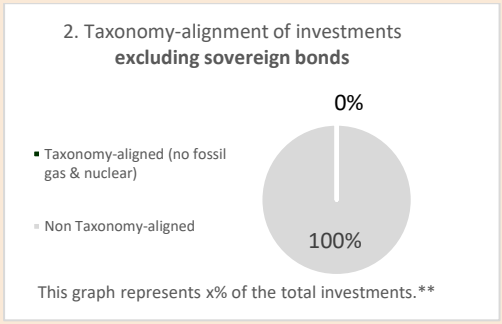
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[53]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective **that do not take into account the criteria** for environmentally sustainable economic

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[53] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:
https://www.robeco.com/en/funds/

e) Robeco Digital Innovations

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Digital Innovations **Legal entity identifier:** 213800WH91CRLWH4AL56

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Digital Innovations is an actively managed fund that invests worldwide in equities from developed and Emerging Countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

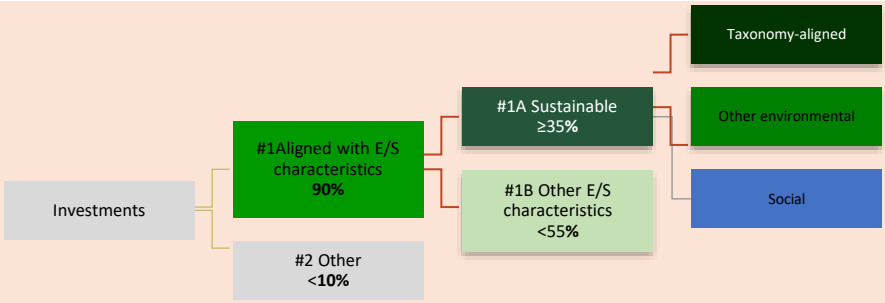
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

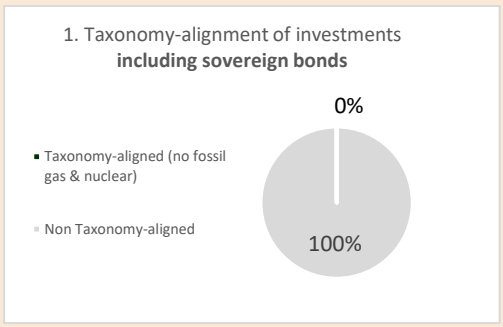
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[54]

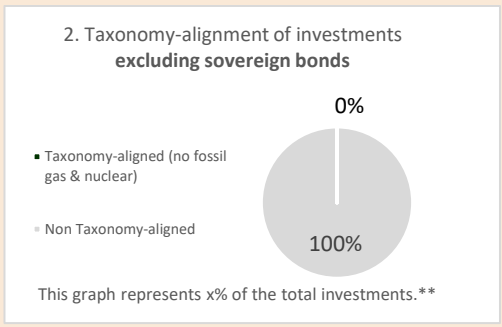
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[54] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17

(Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

f) Robeco FinTech

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco FinTech **Legal entity identifier:** 213800XVWPYZAY58YG68

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes** ●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

o Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco FinTech is an actively managed fund that invests in stocks in developed and Emerging Countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval approval from the Sustainable Investment Center of Expertise.

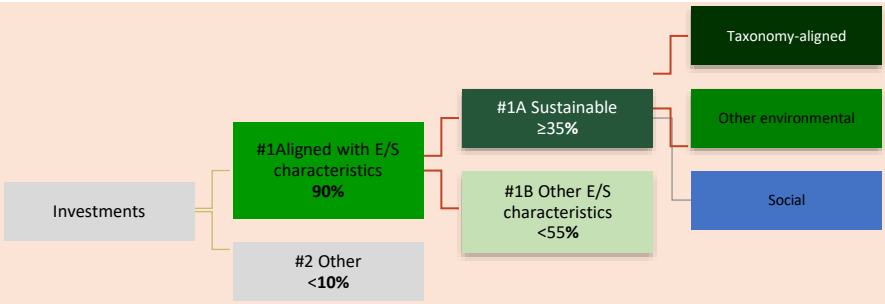
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

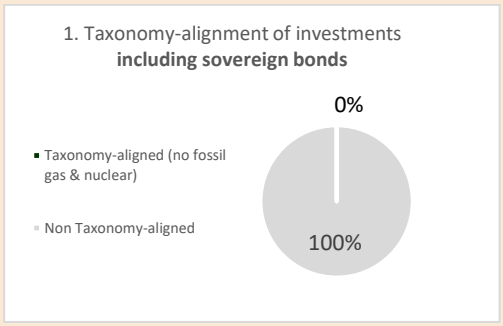
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[55]

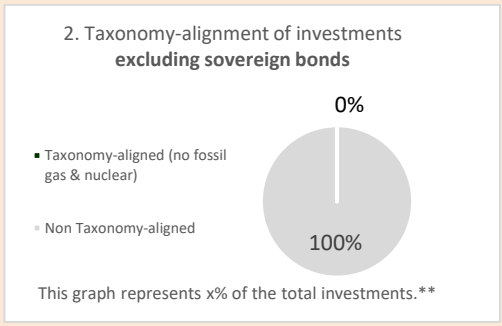
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[55] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic

growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

g) Robeco Circular Economy

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Circular Economy **Legal entity identifier:** 21380076KKDPDXSFG955

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☒ **Yes** ●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 5%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It will make a minimum of **sustainable investments with a social objective: 45%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund has the following sustainable investment objective: to finance solutions that support the transition from traditional production and consumption patterns toward a circular economy. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Zero Hunger (SDG 2), Good health and well-being (SDG 3), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Responsible consumption and production (SDG 12).

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the EU Taxonomy regulation:

- Substantial contribution to the transition to a circular economy
- Pollution prevention and control
- Sustainable use and protection of water and marine resources

There is no reference benchmark designated for the sustainable investment objective promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research

and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Circular Economy is an actively managed fund that invests globally in companies aligned with circular economy principles. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

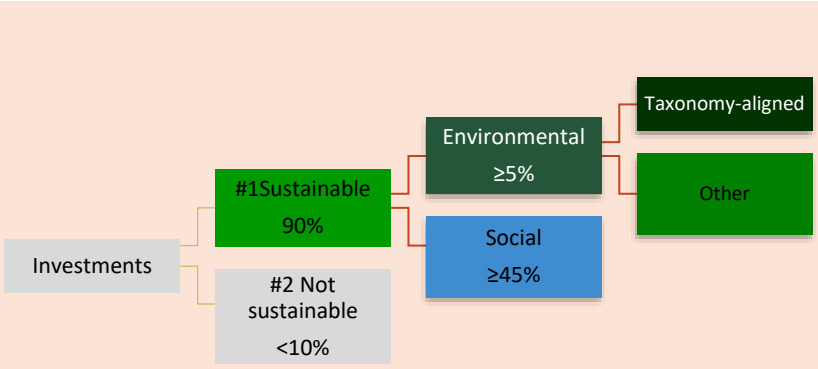
1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the



companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 5% sustainable investments with an environmental objective and a minimum portion of 45% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis. The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
turnover reflecting the share of revenue from green activities of investee companies
capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
operational expenditure (OpEx) reflecting green operational activities of investee companies.

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

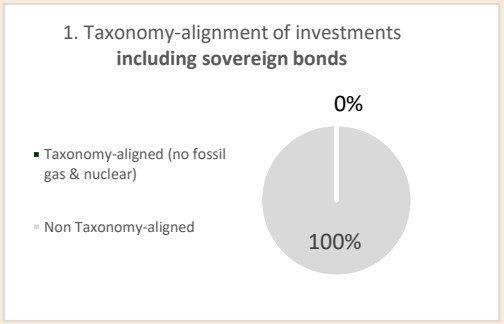
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

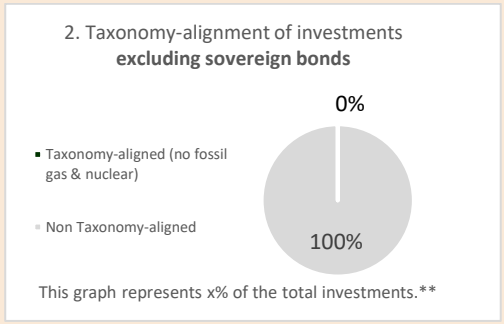
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[56]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 5%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

[56] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 45% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Not applicable.

h) Robeco Smart Energy

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Smart Energy **Legal entity identifier:** 213800XOKIZRP1SLWA28

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☐ **Yes** ●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 15%**

- ☒ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It will make a minimum of **sustainable investments with a social objective: 35%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investment objective of the Sub-fund is to further the transformation of the global energy sector through investments in clean energy production sources, energy efficient products and infrastructure as well as technologies supporting the electrification of the industrial, transportation and heating sectors. These activities are linked to following United Nations Sustainable Development Goals (SDGs): Affordable and clean energy goal (SDG 7), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Climate action (SDG 13).

A part of the investments made by the Sub-fund intends to contribute to the environmental objectives of climate change mitigation under the Taxonomy regulation.

There is no reference benchmark designated for the sustainable investment objective promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of companies to attain the Sub-fund's theme as described within the binding elements.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of holdings and agenda items voted.
5. The % of investments in securities that are excluded as result of the application of Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to

identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Smart Energy is an actively managed fund that invests globally in companies providing technologies for clean energy production, distribution, power management infrastructure and energy efficiency. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

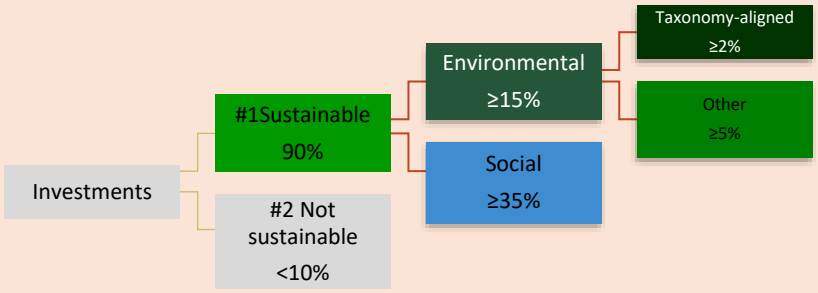
The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund invests 80% in companies that are related to the Sub-fund's theme e.g. companies that have a meaningful revenue exposure to activities in clean energy production sources, energy infrastructure and management, as well as solutions that improve energy efficiency for sectors such as industrials, buildings, transportation or data centers.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments and the two subsets are not equal the total minimum proportion of sustainable investments (90%) in the asset allocation section. The same apply for the further split of the total minimum of environmentally sustainable investments (15%) into the minimum commitments of taxonomy-aligned (2%) and other environmental sustainable investments (5%), where the lack of data availability and coverage also influences the level of the minimum commitments. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the environmental objective of climate change mitigation under the EU Taxonomy.

The Sub-fund intends to contribute to the environmental objectives of climate change mitigation under the EU Taxonomy. The Sub-fund commits to a minimum share of 2% of Taxonomy-aligned activities. The Sub-fund uses Turnover as the primary metric for Taxonomy alignment because it aligns with the existing revenues of companies invested by the Sub-fund. The minimum proportion of Taxonomy-aligned activities shall be calculated covering all assets of the Sub-funds in accordance with Article 17 of the EU Taxonomy Regulation. The Sub-fund only makes investments in companies and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

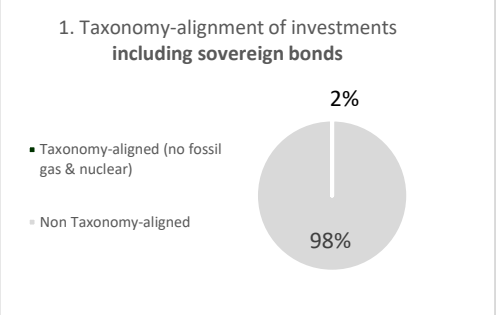
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[57]?

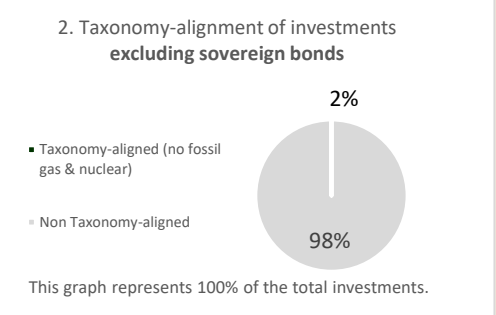
☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No



[57] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 15%. The Sub-fund commits to a minimum share of sustainable investments of 5% that are not alignment with the EU Taxonomy because of the lack of availability of data and coverage in the fund market. The 'Other' environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No

poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

i) Robeco Smart Materials

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Smart Materials **Legal entity identifier:** 213800HUVXY434VECO29

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☒ **Yes** ●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 15%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It will make a minimum of **sustainable investments with a social objective: 35%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

What is the sustainable investment objective of this financial product?

The sustainable investment objective of the Sub-fund is to help mitigate the resource scarcity challenge within industries while supporting economic growth. The Sub-fund targets investing in innovative materials and process technologies that use less or substitute resources, are more scalable, deliver efficiency gains and enable more circular systems including recycling and reuse of materials. These activities are linked to the following United Nations Sustainable Development Goals (SDGs), which the Sub-fund targets: Affordable and clean energy goal (SDG 7), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11), and Responsible consumption and production (SDG 12) as well as Climate action (SDG 13).

A part of the investments made by the Sub-fund intends to contribute to the environmental objective of climate change mitigation under the Taxonomy regulation.

There is no reference benchmark designated for the sustainable investment objective promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of companies selected to attain the Sub-fund's theme as described within the binding elements.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of holdings and agenda items voted.
5. The % of investments in securities that are excluded as result of the application of Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to

identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Smart Materials is an actively managed fund that invests globally in companies that provide innovative materials and process technologies. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

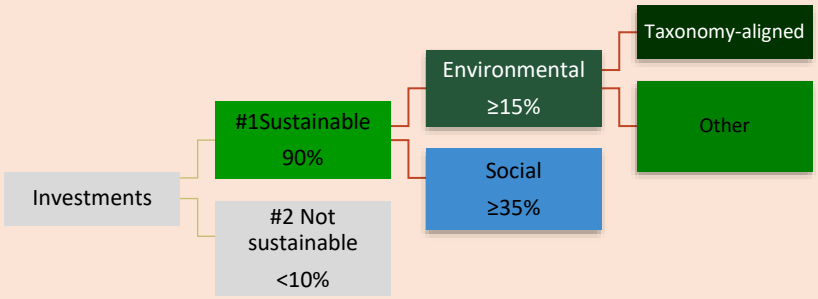
1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores reliant on approval from the internal Committee.
2. The Sub-fund invests 80% in companies that are related to the Sub-fund's theme e.g. companies that have a meaningful revenue exposure to technologies, products or services relating to the extraction, transformation or efficient processing of innovative materials, technologies enabling more automation and efficiency in industrial manufacturing as well as the recycling and reuse of materials.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

staff and tax compliance.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis. The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

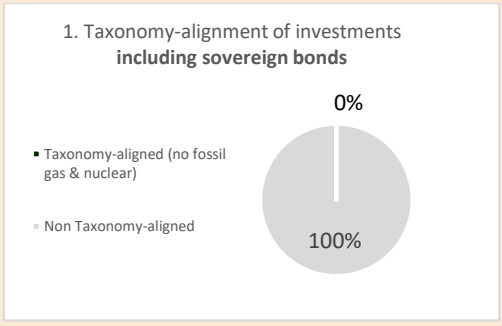
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

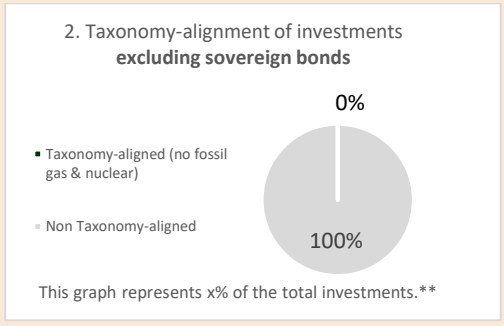
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[58]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[58] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 15%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Not applicable.

j) Robeco Smart Mobility

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Smart Mobility **Legal entity identifier:** 21380025AXSQN7Y4RV82

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☒ **Yes** ●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 15%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It will make a minimum of **sustainable investments with a social objective: 35%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investment objective of the Sub-fund is to support the transformation of the global transportation sector by investing in technologies enabling its electrification as well as in developments in the fields of connectivity and autonomous driving helping to reduce pollution, decongest cities and improve traffic safety. These activities are linked to the following United Nations Sustainable Development Goals (SDGs): Affordable and clean energy goal (SDG 7), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Climate action (SDG 13).

A part of the investments made by the Sub-fund intends to contribute to the environmental objective of climate change mitigation under the Taxonomy regulation.

There is no reference benchmark designated for the sustainable investment objective promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of companies selected to attain the Sub-fund's theme as described within the binding elements.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of holdings and agenda items voted.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to

identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Smart Mobility is an actively managed fund that invests globally in companies benefiting from the electrification of transportation. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund invests 80% in companies that are related to the Sub-fund's theme e.g. companies that have a meaningful revenue exposure to or a leading market position or technology in electric or fuel cell vehicle production including components and the entire value chain, clean energy supply through smart networks and charging infrastructure, as well as shared mobility and autonomous driving.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

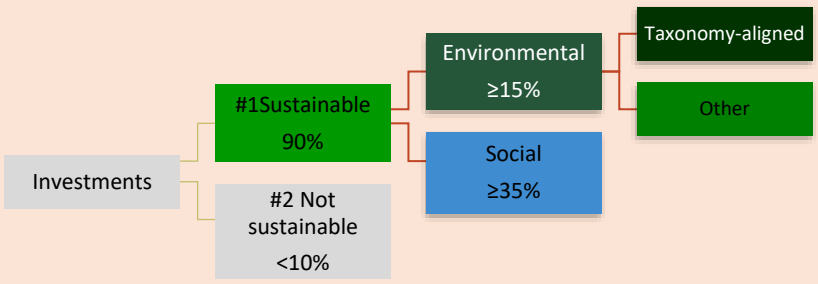
What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

Good governance practices include sound management structures, employee relations, remuneration of

staff and tax compliance.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

investee companies.

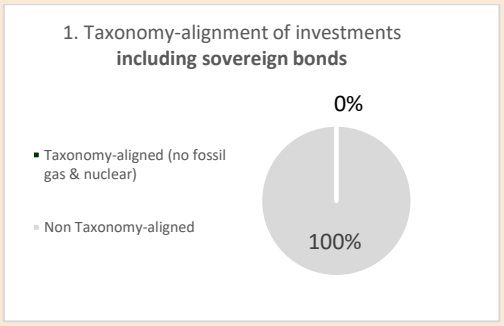
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

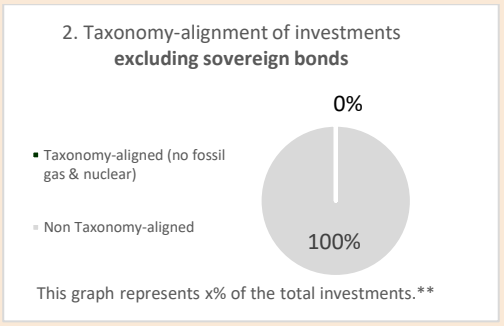
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[59]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

[59] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 15%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Not applicable.

k) Robeco Healthy Living

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Healthy Living **Legal entity identifier:** 213800KMESITUG55WI14

Sustainable investment objective

Does this financial product have a sustainable investment objective?

☒ **Yes**	☐ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:__%** ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective
☒ It will make a minimum of **sustainable investments with a social objective: 70%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments of the sub-fund aim to promote good health and well-being by investing in companies that contribute to an efficient healthcare system, promote health preservation and provide opportunities for people to live productive lives. These activities are linked to the following United Nations Sustainable Development Goals (UN SDGs): Zero hunger (SDG 2), Good health and wellbeing (SDG 3), and Clean water and sanitation (SDG 6).

Therefore the financial product does not take into account the EU criteria for environmentally sustainable economic activities. The Sub-fund does make sustainable investments with a social objective.

There is no reference benchmark designated for the purpose of attaining the sustainable investment objective.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of investments in securities that are excluded as a result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Healthy Living is an actively managed fund that invests globally in companies that promote good health and well-being and contribute to an efficient healthcare system. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

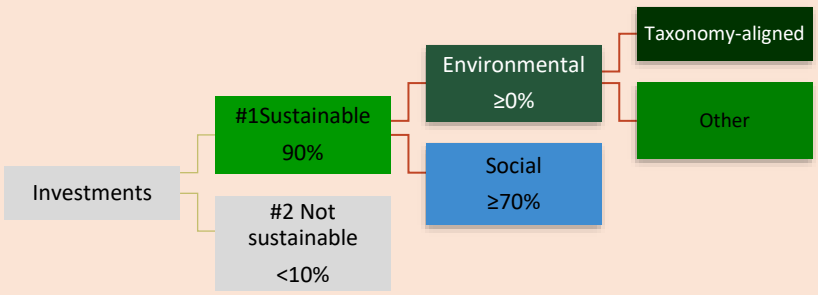
The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 70% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis. The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

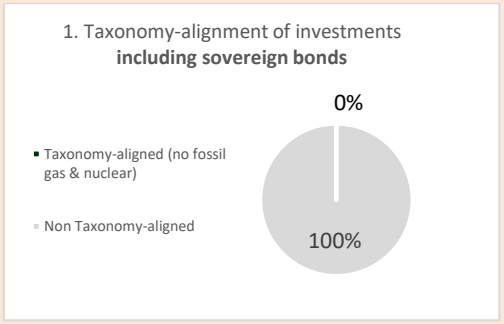
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

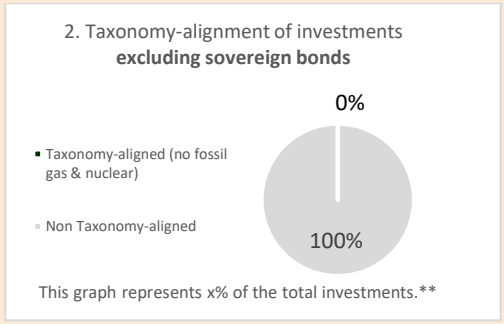
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[60]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[60] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 70% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

I) Robeco Sustainable Water

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Sustainable Water **Legal entity identifier:** 2138006TSIFH5ZD97319

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☒ **Yes** ●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 5%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It will make a minimum of **sustainable investments with a social objective: 45%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments of the Sub-fund aim to help mitigate the global challenges related to scarcity, quality, and allocation of water. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Good health and well-being (SDG 3), Clean water and sanitation (SDG 6), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11), Responsible consumption and production (SDG 12), and Life below water (SDG 14).

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the Taxonomy regulation:

- Sustainable use and protection of water and marine resources
- Pollution prevention and control

There is no reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

How *do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?*

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research

and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Sustainable Water is an actively managed fund that invests globally in companies offering products and services across the water value chain. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

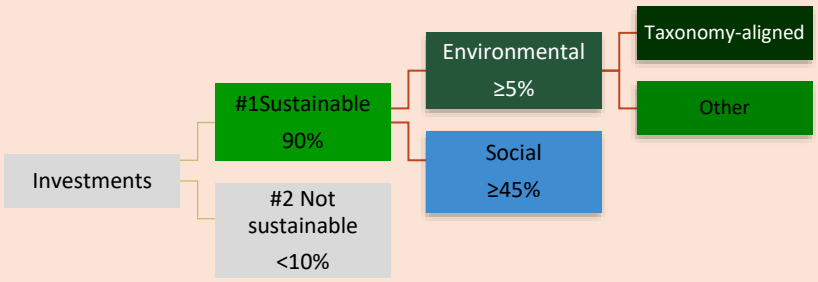
The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 5% sustainable investments with an environmental objective and a minimum portion of 45% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis. The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

investee companies.

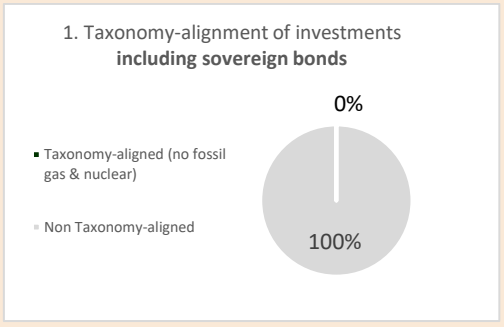
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

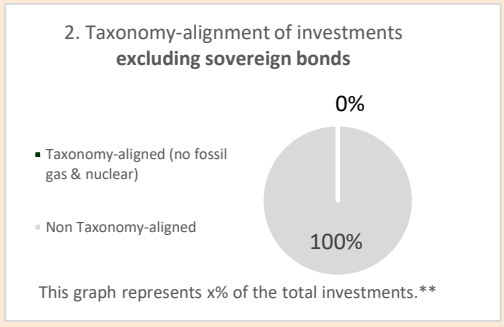
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[61]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[61] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

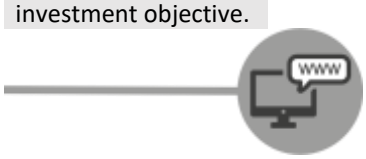
What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 5%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 45% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?



The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Not applicable.

m) Robeco Biodiversity Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Biodiversity Equities

Legal entity identifier: 213800YFIUFHGS8PLX94

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☒ **Yes**

●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 10%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It will make a minimum of **sustainable investments with a social objective: 40%**

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aim to support the sustainable use of natural resources and ecosystem services, as well as technologies, products and services that help to reduce Biodiversity threats or restore natural habitats.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The foregoing is implemented by mainly investing in companies that advance the following United Nations Sustainable Development Goals (UN SDGs): Clean Water and Sanitation (SDG 6), Sustainable Cities and Communities (SDG 11), Responsible consumption and production (SDG 12), Life below water (SDG 14) and Life on Land (SDG 15).

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the Taxonomy regulation:

- Protection and restoration of biodiversity and ecosystems
- Sustainable use and protection of water and marine resources
- Pollution prevention and control

There is no reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or neutral SDG score. Allowed neutral SDG score companies can be companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of investments in securities identified as making or enabling the nature or biodiversity transition.
3. The number of companies which are selected for engagement
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The number of holdings and agenda items voted.
6. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to

identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Biodiversity Equities is an actively managed fund that invests globally in companies that provide innovative materials and process technologies. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets that relate to the theme of the Sub-fund can consist of neutral SDG scores, reliant on approval from the internal Committee.
2. The Sub-fund invests at least 70% of the portfolio in Transition-related Investments making and enabling the nature or biodiversity transition as defined in the Glossary of Defined Terms section of this Prospectus.
3. The Sub-fund will at least engage with a minimum of 20% of investments on an annual basis which show potential for improvement on biodiversity footprint.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
6. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the policy to assess good governance practices of the investee companies?

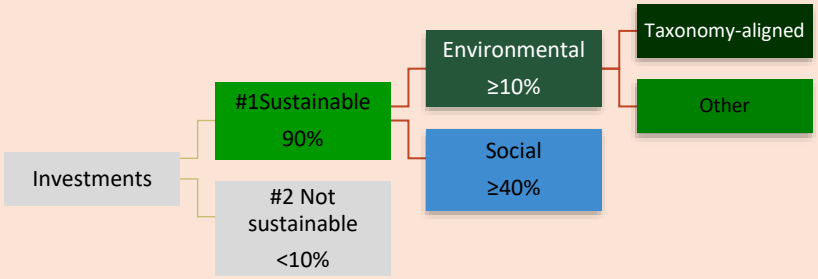
Good governance practices include sound management structures, employee relations,

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry

remuneration of staff and tax compliance.

established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 10% sustainable investments with an environmental objective and a minimum portion of 40% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

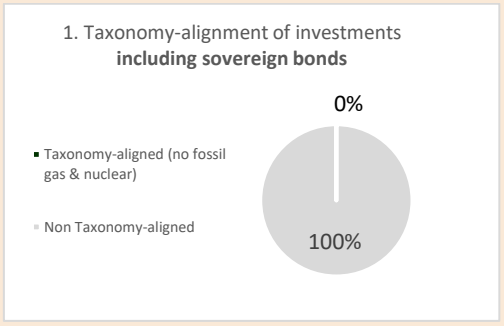
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

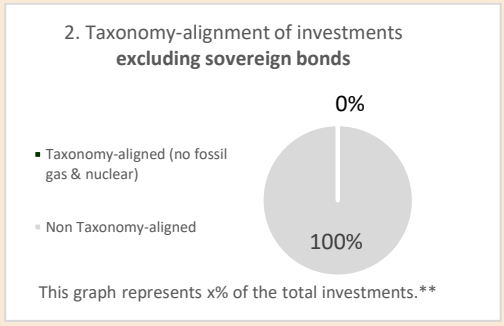
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[62]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[62] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

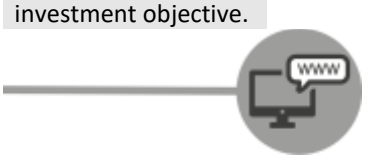
What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 10%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 40% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?



The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Not applicable.

n) Robeco Global Climate Transition Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Global Climate Transition Equities

Legal entity identifier: 213800T59KJ3I92BUA65

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investments in companies that contribute to the climate transition. These Transition-related Investments are identified to be making and/or enabling the transitional efforts required to limit global temperature increase to well-below 2°C degrees, aligned with the goals of the Paris Agreement.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes adherence to the exclusion criteria from the Climate Transition Benchmark (CTB) such as investments in controversial behavior, controversial weapons, and tobacco. Therefore, the Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities identified as Transition-related Investments contributing to the climate transition.
   More information on the identification of Transition-related Investments is included in the Glossary of Defined Terms section of this Prospectus.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches

of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for

any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Global Climate Transition Equities is an actively managed Sub-fund that invests in stocks of companies in developed and emerging markets across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund invests at least 80% of the portfolio in Transition-related Investments contributing to the climate transition:
   a. Investments making the transition: entities identified having credible emission reduction targets, aligning with the goals of the Paris Agreement, and which demonstrate the credibility of those targets. The assessment takes into consideration the company's projected emissions alignment with its required sector decarbonization pathway under a well-below 2°C scenario (regionally adjusted where needed) and whether the company's targets are verified and contain a credible transition plan for achieving its emission-reduction goals. Eligible investments have an 'Aligned' or 'Aligning' Robeco Climate Traffic Light assessment that indicates a credible emissions reduction pathway.
   b. Investments enabling the transition: entities that are involved in activities such as products, technologies and services, that are needed to make the transition possible. Eligible entities meet measurable KPIs related to product groups or operational activities that Robeco considers to accelerate the decarbonization of the economy, measured through the Robeco SDG Framework, which identifies to what extent a company contributes to the concrete sub-targets set out by the SDGs. Eligible investments hold a positive score on SDG 7 and/or SDG 13, based on the Robeco SDG Framework, indicating companies that provide solutions to enable climate change mitigation.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.
5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

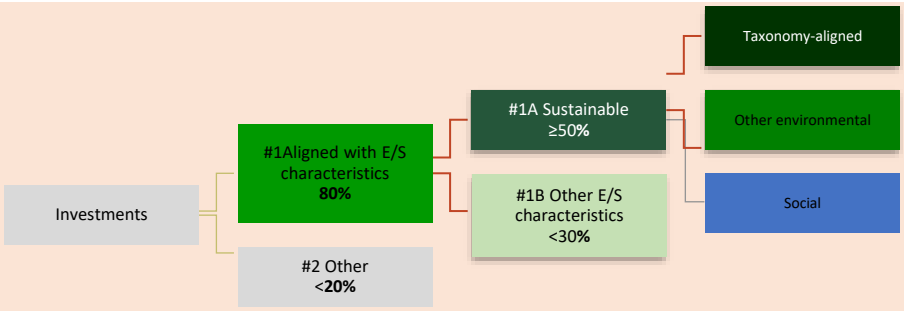
What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established

structures, employee relations, remuneration of staff and tax compliance.

norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for

hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

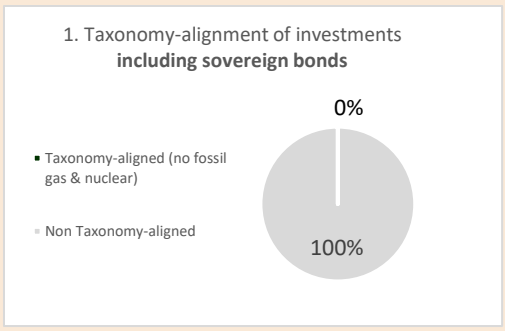
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

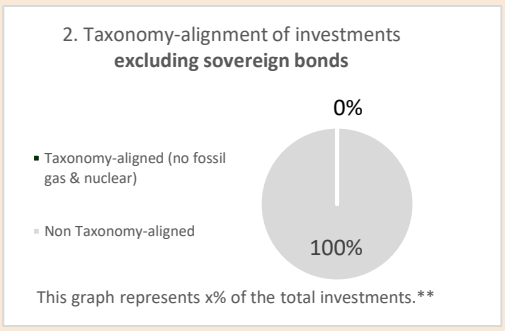
Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[63]

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.



Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

[63] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

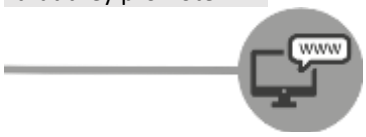
Therefore, the minimum share of sustainable investments with an environmental objective is 0%. While investments in transition assets may have an environmental objective, these are not per se sustainable investments.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective.

Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?



The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

o) Robeco Powering AI

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Powering AI **Legal entity identifier:** TBD

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes** ●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-explanation-sdg-framework.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.
The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.
Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Powering AI is an actively managed fund that invests worldwide in equities from developed and Emerging Countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

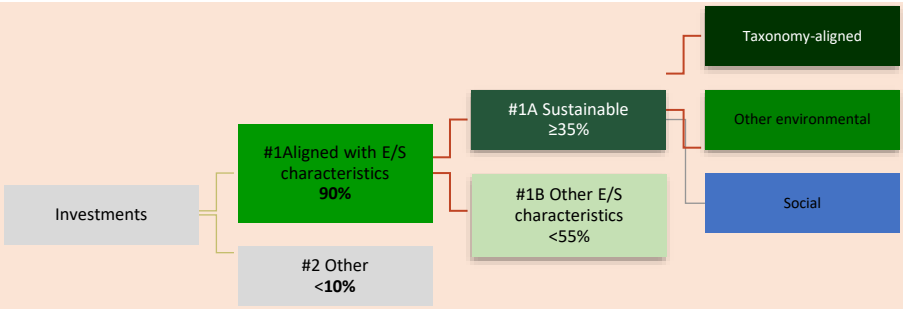
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

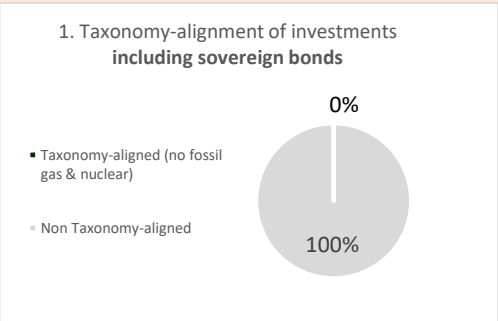
How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category as described below.

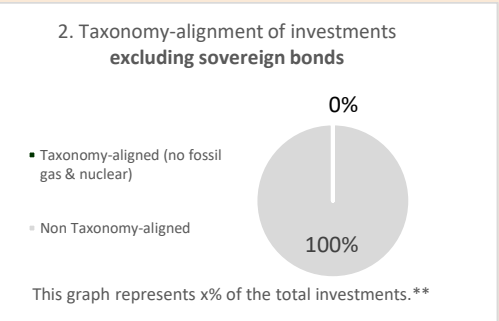
In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[64]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have

[64] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?
0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

p) Robeco Minerals of the Future

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Minerals of the Future

Legal entity identifier: TBD

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes**

●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-explanation-sdg-framework.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.
The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.
Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☐ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
  - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Minerals of the Future is an actively managed fund that invests worldwide in equities from developed and Emerging Countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval from the Sustainable Investment Center of Expertise.

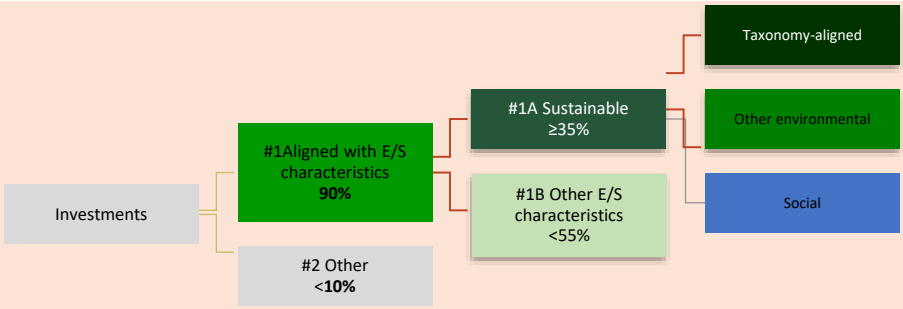
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category as described below.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

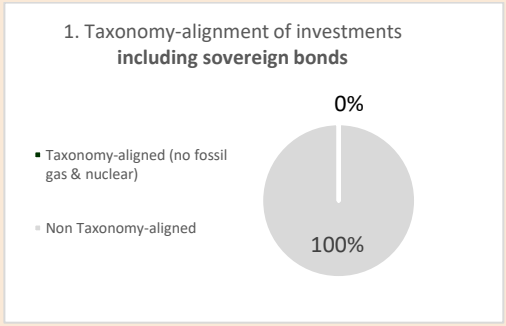
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

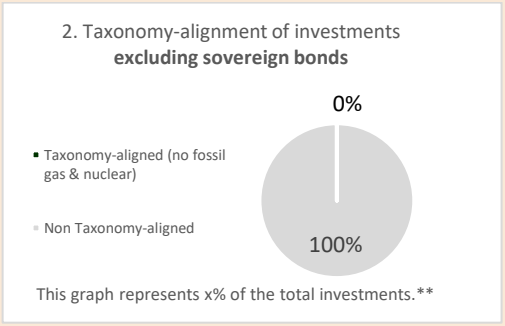
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[65]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

[65] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?
0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

4. GLOBAL BOND SUB-FUNDS

a) Robeco High Yield Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco High Yield Bonds **Legal entity identifier:** 21380044N3COGER5OK12

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes** ●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable

Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✖ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco High Yield Bonds is an actively managed fund that invests in high yield corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 2% in Green, Social and/or Sustainability bonds.

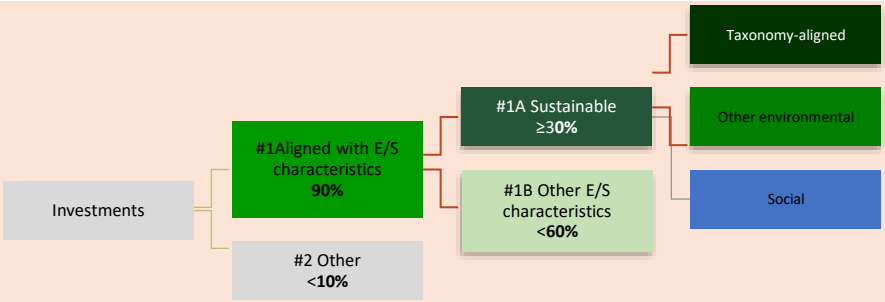
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

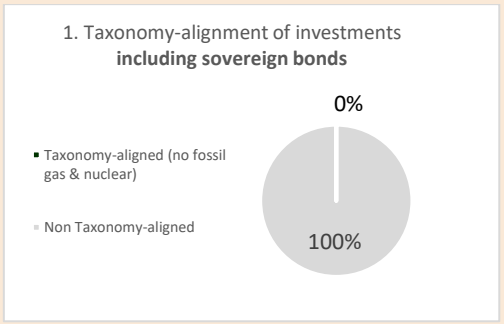
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

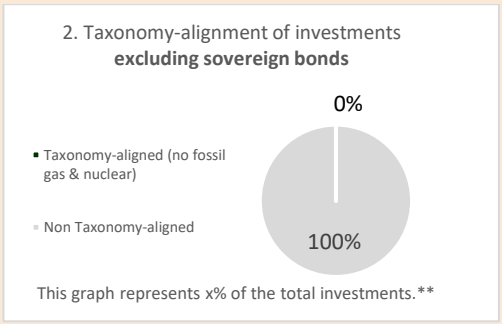
Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[66]?

☐ Yes

☐ In fossil gas ☐ In nuclear energy



☒ No



To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

[66] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:
https://www.robeco.com/en/funds/

- Robeco's PAI Statement can be accessed via the following link: https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf

b) Robeco Global Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Credits **Legal entity identifier:** 5493003I7YFQHV1J8E29

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Global Credits is an actively managed fund that invests primarily in a diversified portfolio of global investment grade corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

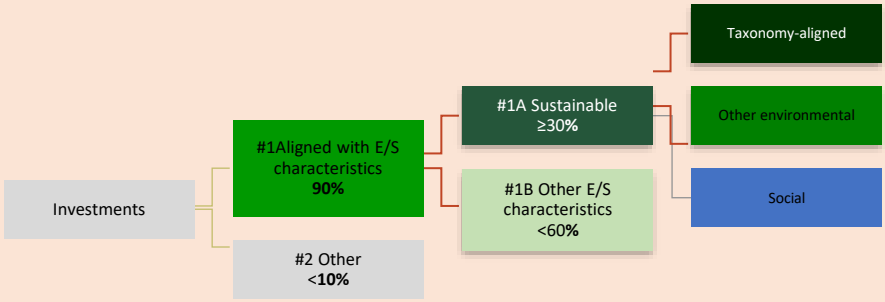
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

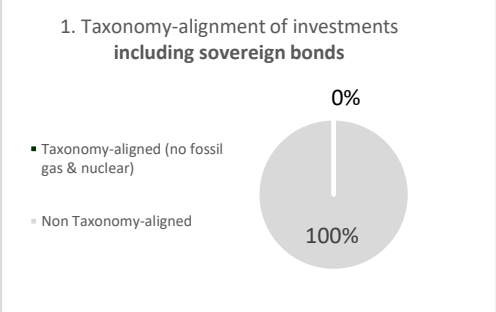
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

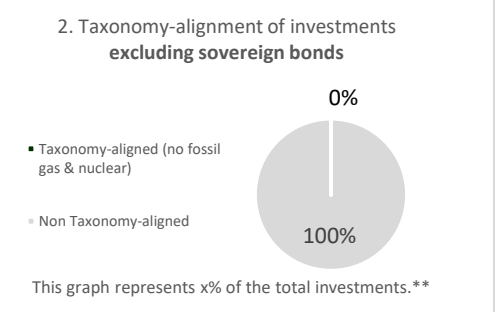
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[67]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

[67] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

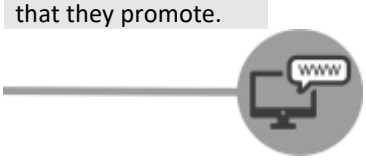
What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?



The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:
https://www.robeco.com/en/funds/

c) Robeco QI Global Multi-Factor Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Multi-Factor Credits

Legal entity identifier: 2138004NM2KLQ7YMDZ55

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprints of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score as compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global Multi-Factor Credits is an actively managed fund that invests systematically in predominantly investment grade credits. The selection of these investments is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund focuses on offering exposure to a number of quantitative strategies in a diversified way, such as, but not limited to, a strategy focusing on bonds with (Low volatility); on bonds with an attractive valuation (Value) and a strategy focusing on bonds of companies with a medium term attractive performance trend (Momentum).The strategy integrates sustainability indicators on a continuous basis as part of the investment selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than those of the General Market Index.
4. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

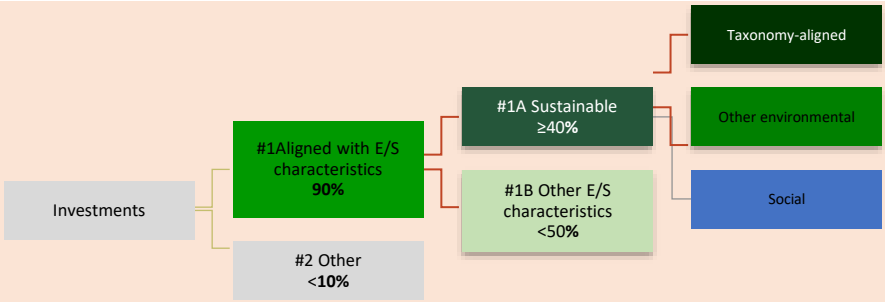
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity

management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

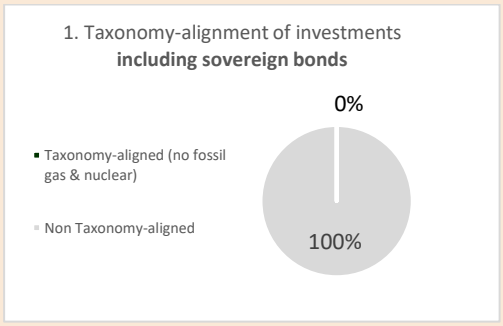
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

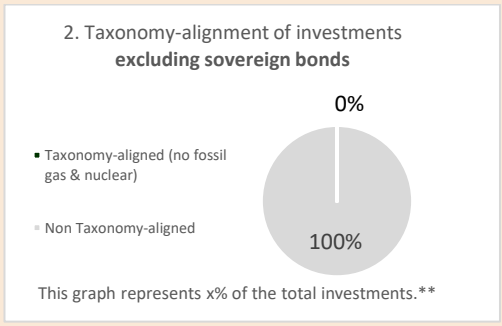
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[68]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[68] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

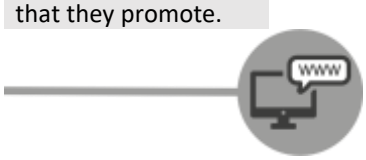
What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?



The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

d) Robeco QI Global Multi-Factor Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Multi-Factor Bonds

Legal entity identifier: 2138009INGIOSX2F6B58

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes**

- ☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ It will make a minimum of **sustainable investments with a social objective:** ___%

●○ ☒ **No**

- ☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments
  - ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with a social objective
- ☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund promotes the following E/S characteristics for investments in corporate bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the corporate bonds in the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

The Sub-fund has the following E/S characteristics for investments in government bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund promotes having a lower Carbon footprint than the government bonds in the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators for investments in corporate bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the corporate bonds in the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

The Sub-fund has the following sustainability indicators for investments in government bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The weighted average score on Robeco's Country Sustainability Ranking.
3. The Sub-fund's weighted carbon emissions per capita compared to the government bonds in the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco QI Global Multi-Factor Bonds is an actively managed fund that invests globally in bonds issued by governments, agencies and corporates. The selection of these bonds is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund uses low-risk, quality, value, momentum and size factors to select the most attractive bonds.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The strategy integrates sustainability indicators on a continuous basis as part of the investment selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for investments in corporate bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's weighted Carbon footprint of corporate bonds in portfolio are better than those of the corporate bonds in the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund's weighted average ESG score of the corporate bonds in portfolio is better than that of the corporate bonds in the General Market Index.

5. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The Sub-fund has the following binding elements for investments in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index.
3. The Sub-fund's weighted carbon emissions per capita of the government bonds in portfolio is better than that of the government bonds in the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

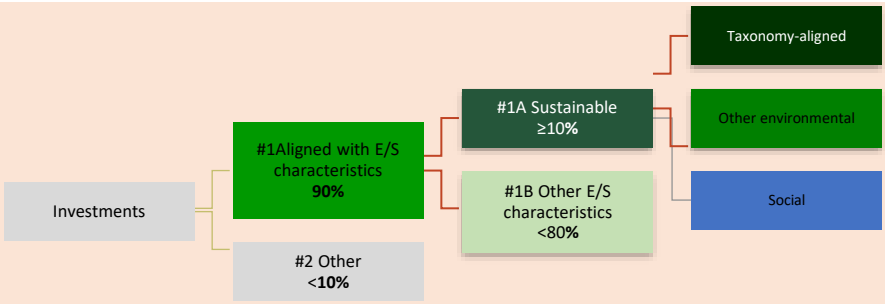
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 10% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

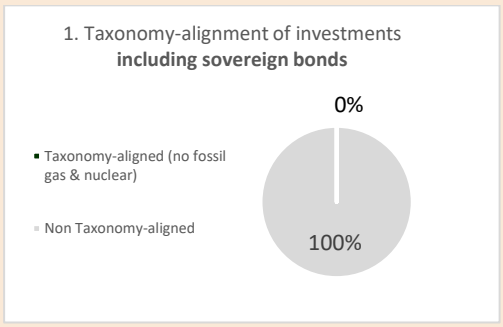
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[69]?

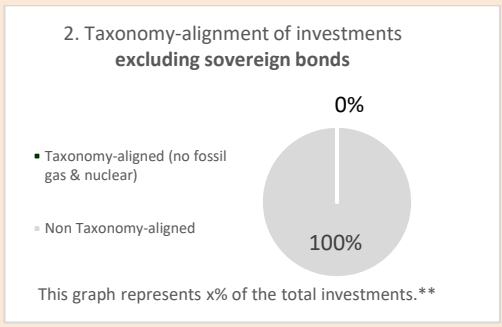
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[69] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-

fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

e) Robeco Global Short Duration Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Short Duration Credits

Legal entity identifier: 2138001CC7H5L9AYFW22

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

What investment strategy does this financial product follow?

Robeco Global Short Duration Credits is an actively managed fund that invests primarily in a diversified portfolio of global investment grade corporate bonds with a short maturity.

The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

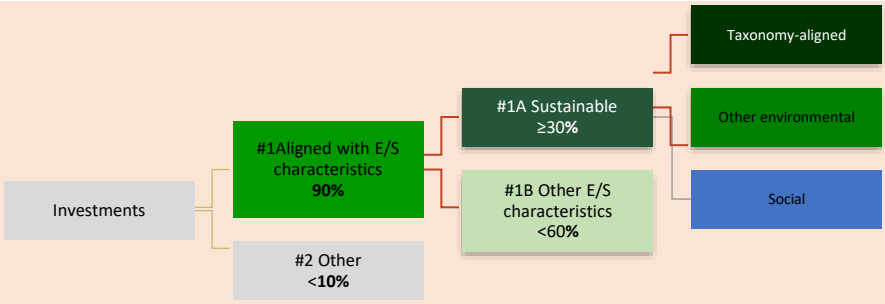
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity

management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

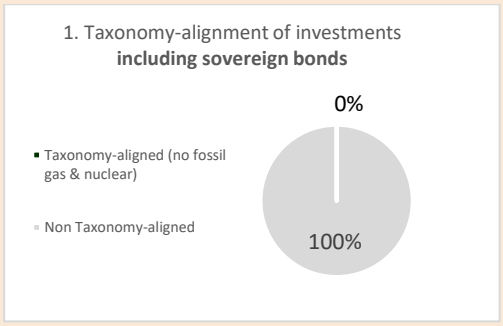
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

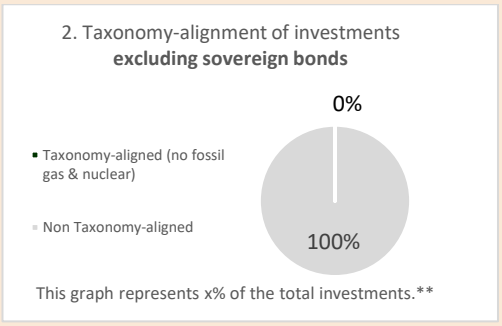
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[70]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[70] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

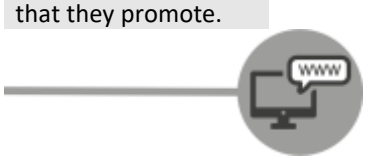
What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?



The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:
https://www.robeco.com/en/funds/

f) Robeco Corporate Hybrid Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Corporate Hybrid Bonds

Legal entity identifier: 213800KXAXX8MJC82S52

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and,

+3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Corporate Hybrid Bonds is an actively managed fund that invests in global corporate hybrids bonds issued by non financials. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

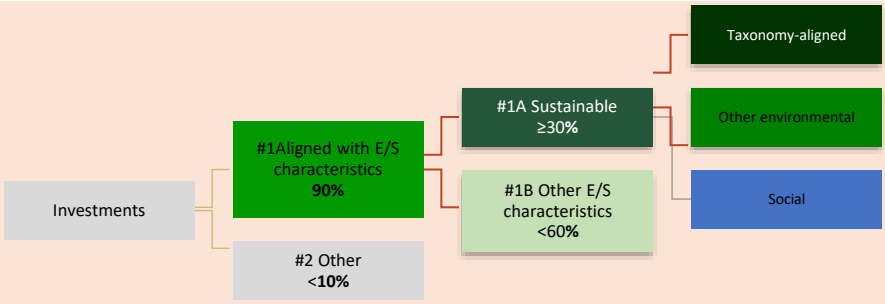
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in green or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity

management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

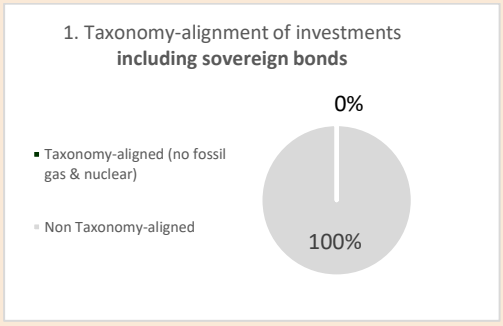
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

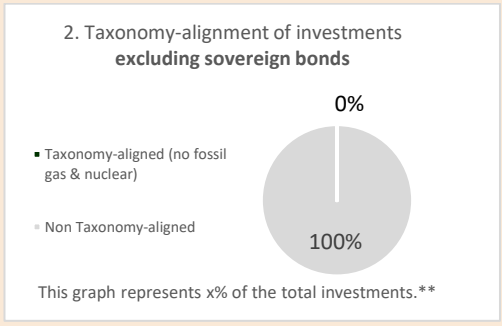
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[71]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[71] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

g) Robeco QI Global Multi-Factor High Yield

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Global Multi-Factor High Yield

Legal entity identifier: 213800AQVRERU8HLMD03

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes having a lower Carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes having a lower Water and Waste footprint than the General Market Index.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted Carbon footprint compared to the footprint of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints compared to the footprint of the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score as compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the Water and Waste footprint performance targets of the Sub-fund, the following PAIs are considered:
  - Carbon footprint (PAI 2, Table 1)
  - Water and waste indicators (PAI 7-9, Table 1). Robeco will use Water and Waste footprints until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco QI Global Multi-Factor High Yield is an actively managed fund that invests systematically in high-yield bonds. The selection of these bonds is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund focuses on offering exposure to a number of quantitative strategies in a diversified way, such as, but not limited to, a strategy focusing on bonds with (Low volatility); on bonds with an attractive valuation (Value) and a strategy focusing on bonds of companies with a medium term attractive performance trend (Momentum).The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
2. The Sub-fund's weighted Carbon footprint is better than that of the General Market Index.
3. The Sub-fund's weighted Water and Waste footprints are better than that of the General Market Index.
4. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

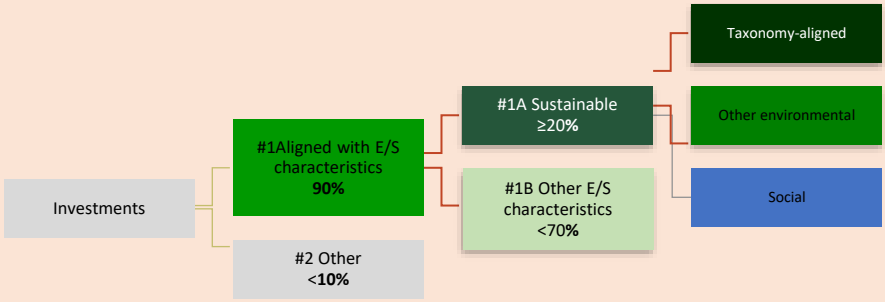
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 20% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

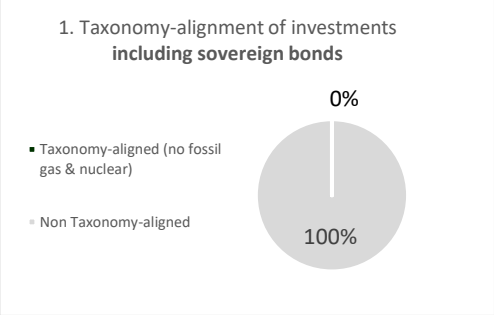
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

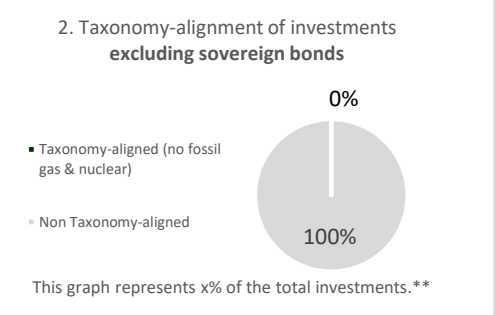
Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[72]?

☐ Yes

☐ In fossil gas ☐ In nuclear energy



☒ No



To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

[72] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:
https://www.robeco.com/en/funds/

h) Robeco Credit Income

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Credit Income **Legal entity identifier:** 213800T791CO7EB3NL58

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes** ●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. Investments in companies with a positive or neutral SDG score based on the internally developed SDG Framework.
2. For its allocation to Emerging Markets sovereign bonds: investments in countries with a positive or neutral SDG score based on the internally developed SDG Framework.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Robeco's SDG Framework assesses the contribution of companies and countries to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' and countries' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies and countries on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Credit Income is an actively managed fund that invests in companies and countries that contribute to realizing the UN Sustainable Development Goals (SDGs). The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

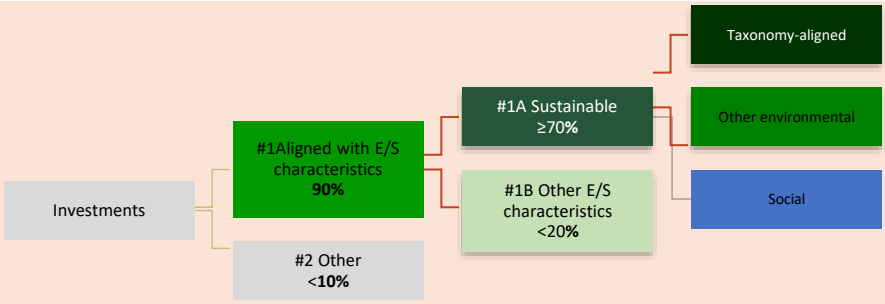
1. The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
2. For its allocation to Emerging Markets sovereign bonds: The Sub-fund is solely invested in countries that hold a positive or neutral SDG score.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
4. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.



Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

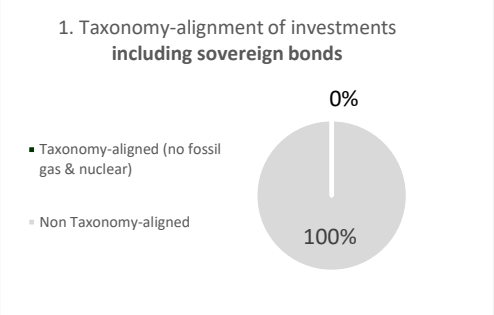
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

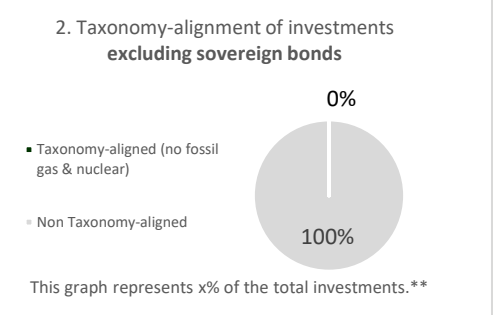
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[73]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*
*** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.*

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[73] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies and countries that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

i) Robeco Global SDG Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global SDG Credits **Legal entity identifier:** 213800CKSU373L6J3U62

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes** ●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
4. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Global SDG Credits is an actively managed fund that invests in corporate bonds in the global developed and emerging markets. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
3. The Sub-fund invests a minimum of 10% in Green, Social and/or Sustainability bonds.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

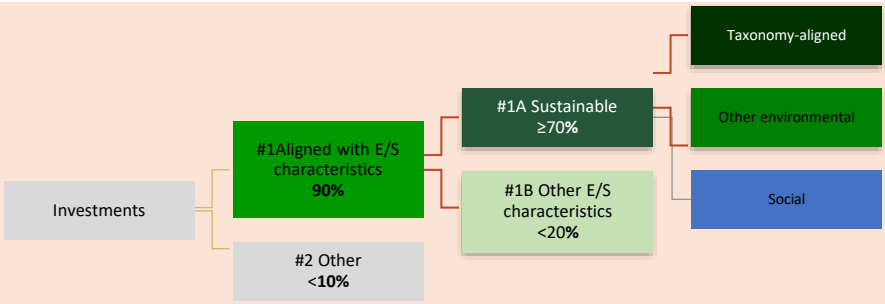
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

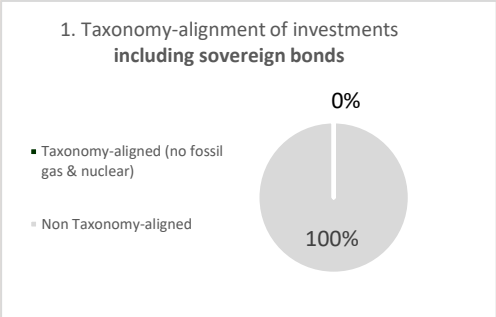
0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

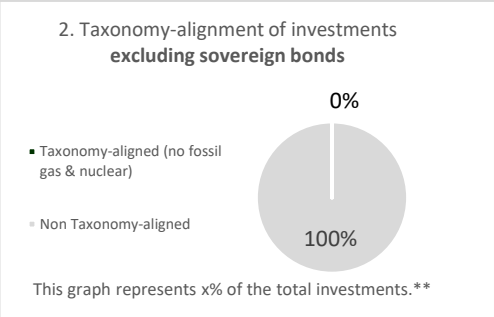
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[74]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4

[74] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

(Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

j) Robeco SDG High Yield Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco SDG High Yield Bonds **Legal entity identifier:** 2138004EB4XIM39VFW48

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes** ●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
4. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco SDG High Yield Bonds is an actively managed fund that invests in global corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
3. The Sub-fund invests a minimum of 2% in Green, Social and/or Sustainability bonds.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

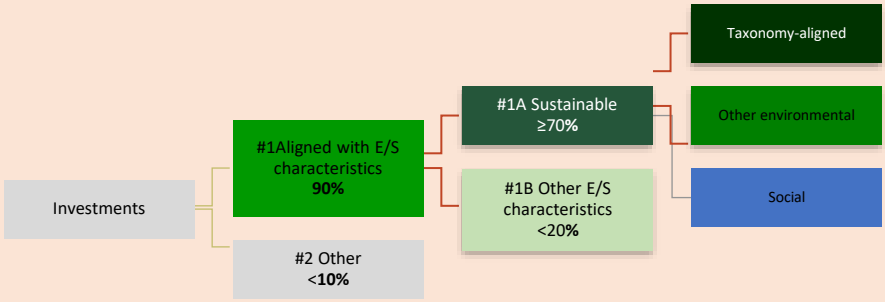
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance



test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

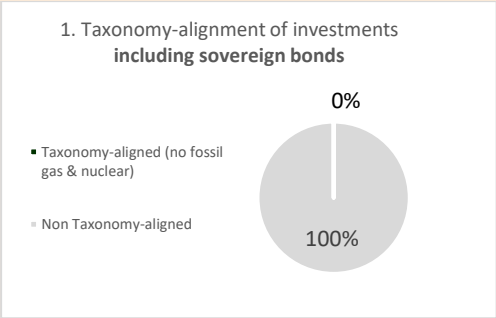
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

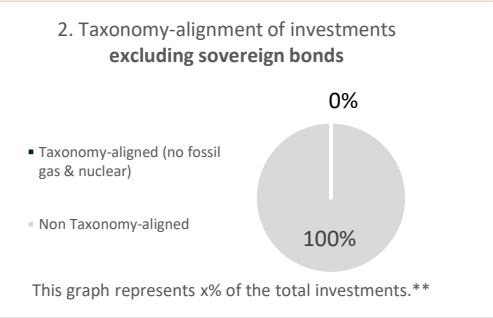
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[75]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[75] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

k) Robeco Global Green Bonds

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Green Bonds **Legal entity identifier:** 213800TZF6IC5ZUI3146

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☒ **Yes** ●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 70%**

- ☒ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

The Sub-fund invests predominantly in Green Bonds, as well as in social and Sustainability bonds.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

With these investments, the Sub-fund finances investments that contribute to environmental goals like:

- Climate change mitigation and adaptation,
- Sustainable use and protection of water and marine resources,
- Transition to a circular economy,
- Waste prevention and recycling,
- Pollution prevention, and
- Protection of healthy ecosystems.

There is a reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of the Sub-fund invested in Green Bonds.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Green Bonds Principles.

For a large share of Green, Social and Sustainability bonds, Robeco adds an extra assessment on sustainability factors by applying Robeco's Green Bonds Framework or Social Bond Framework.

Via these frameworks, the following adverse impacts are directly considered:

- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)
  For Green Bonds, there is no disclosures on GHG emissions. Yet, avoided emissions (scope 4 emissions) are considered. For Social bonds, Robeco considers board gender diversity (Table 1, PAI 13) depending on whether the use of proceeds of the social bond will tackle gender diversity issues.

  Lastly, Robeco's SDG Framework is considered for the analysis of Green, Social or Sustainability bonds. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to

the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Green, Social and Sustainability bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These frameworks directly and indirectly assess PAI indicators

Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

☐ No

What investment strategy does this financial product follow?

Robeco Global Green Bonds is an actively managed fund that invests in Green Bonds globally issued by governments, government-related agencies and corporates. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Other bonds invested in are either Social bonds or Sustainability bonds. The strategy

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

integrates sustainability indicators on a continuous basis as part of the investment selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

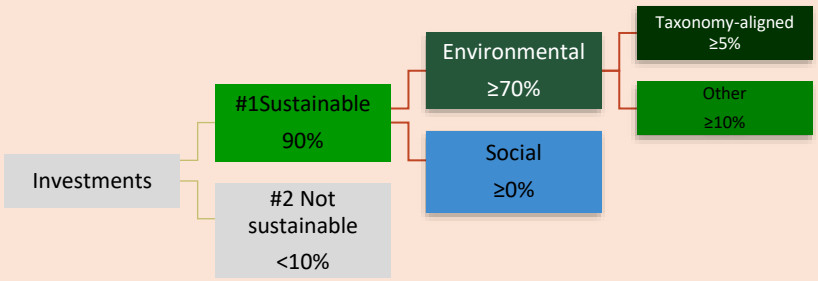
1. The Sub-fund allocates a minimum of 80% to Green Bonds based on external vendor data or the internally developed framework by Robeco.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, defined as investments in Green, Social or Sustainability bonds, with a minimum portion of 70% sustainable investments with an environmental objective. These percentages are minimum commitments so the two subsets are not equal to the total minimum proportion of sustainable investments in the asset allocation section. The same applies for the further split of the total minimum of environmentally sustainable investments into the minimum commitments of taxonomy-aligned and other environmental sustainable investments, where the lack of data availability and coverage also influences the level of the minimum commitments.

The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

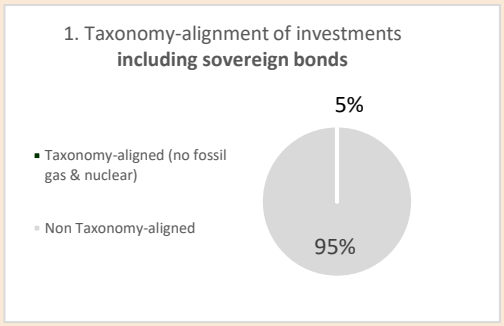
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy. The Sub-fund commits to a minimum share of 5% of Taxonomy-aligned activities. The Sub-fund uses CapEx as the primary metric for Taxonomy alignment because it reflects the issuers' of use of use of proceed planned investments in environmentally sustainable activities, which is particularly relevant for these transition sectors where current turnover does not capture future alignment. The minimum proportion of Taxonomy-aligned activities shall be calculated covering all assets of the products in accordance with Article 17 of the EU Taxonomy Regulation. The expected level of alignment with and without sovereign bonds is the same.

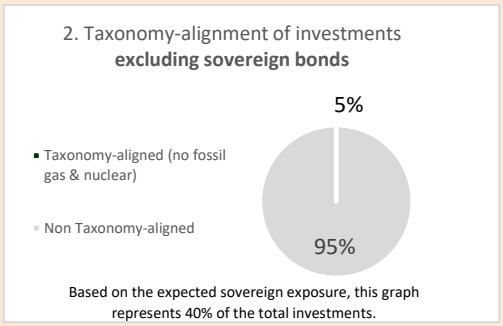
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[76]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* ***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 70%. Green Bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. The Sub-fund commits to a minimum share of sustainable investments of 10% with an 'Other' environmental objective because of the current data availability on the EU Taxonomy in the fund market.

[76] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. The Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific social investment objective.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Yes, the Sub-fund uses the Bloomberg MSCI Global Green Bond Index as a reference index to meet the sustainable investment objective of The Sub-fund.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

Given that sustainable investment objective of The Sub-fund is to finance investment in Green Bonds, the reference index is aligned with such objective of The Sub-fund by applying clearly defined rules for evaluating Green Bonds composition in the index.

Bloomberg MSCI evaluates Green Bonds to ensure adherence to established Green Bond Principles (GBP) and to examine bonds by their environmental use of proceeds. The index provider follows an eligibility criteria along four dimensions as per the GBP for assessing eligibility to index. In this way The Sub-fund's investment objective is aligned with the reference index.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy of The Sub-fund.

The Bloomberg MSCI Global Green Bond Index is rebalanced on the last business day of each month. New bond issues are not added to the Projected Universe until after the Green Bond Evaluation. On the 25th calendar day of each month, the list of Green Bonds that are evaluated is updated by MSCI ESG Research which are taken into consideration before rebalancing.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for eligibility and inclusion of Green Bonds.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.msci.com

Where can I find more product specific information online?

More product-specific information can be found on the website:

I) Robeco Climate Global Credits

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Climate Global Credits **Legal entity identifier:** 213800LB657HDJBI4637

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☒ **Yes** ●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 50%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aim to reduce the Carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2◦C.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund also promotes investment in Green, Social and/or Sustainability bonds used to finance environmental and social projects.

The sustainable investments contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted Carbon footprint compared to the Paris-Aligned Benchmark.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as a result of the application of Robeco's Exclusion Policy.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the Regulation on EU Climate Benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments are constituents of Solactive Paris Aligned Global Corporate Index or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website

(https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Yes, the Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Via the Carbon footprint performance target of the Sub-fund, the PAI on Carbon footprint (PAI 2, Table 1) is considered via the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year

before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Climate Global Credits is an actively managed fund that invests mainly in nongovernment bonds all around the world. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

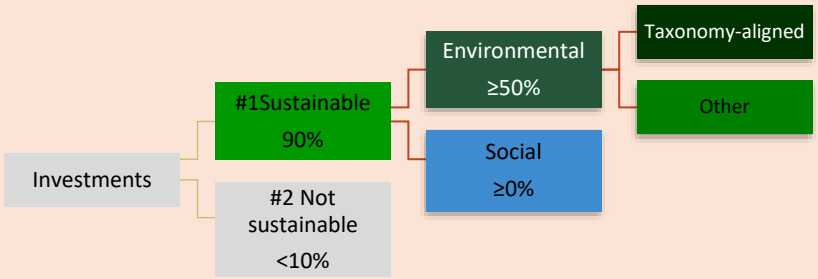
1. The Sub-fund's weighted Carbon footprint is better than the Paris-Aligned Benchmark.
2. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
4. The Sub-fund refrains from investing in companies that are excluded on the basis of Article 12 of the Regulation on EU Climate Benchmarks as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks. This includes the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework, sustainable investments that adhere to the Paris-Aligned Benchmark criteria, and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

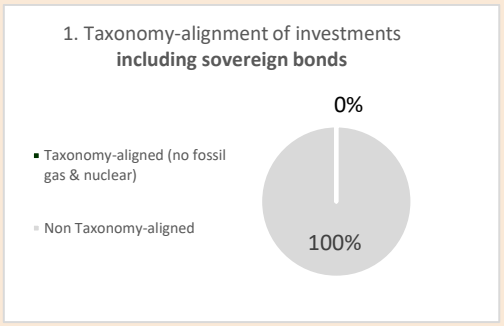
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

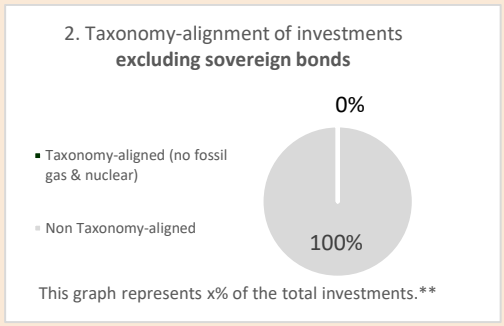
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[77]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

[77] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 50%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, it could be possible that some companies contribute to social objectives either by being a part of the Paris-Aligned Benchmark or having a positive score via Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Yes, the Sub-fund follows the Solactive Paris Aligned Global Corporate Index as a reference index to meet the Carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their Carbon footprint.

The methodology of the reference index is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others, the reference index complies with those criteria set out in Article 12 of the Regulation on EU Climate Benchmarks.

The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's weighted Carbon footprint is better than the Solactive Paris Aligned Global Corporate Index.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules on a monthly basis which ensures alignment with the investment strategy and objective of the Sub-fund. The data used is sourced externally from Institutional Shareholder Services Inc.

The Sub-fund follows a rebalancing strategy which ensures that the Carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.solactive.com/indices/

Where can I find more product specific information online?

More product-specific information can be found on the website:
https://www.robeco.com/en/funds/

m) Robeco Transition Emerging Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Transition Emerging Credits

Legal entity identifier: 5493008QKCFCW6Q0H681

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in companies and/or entities that contribute to the climate transition, nature or biodiversity transition and/or social transition. These Transition-related Investments are identified to be making, enabling and/or financing the transitional efforts required to limit global temperature increase to well-below 2°C degrees aligned with the goals of the Paris Agreement, to halt and reverse biodiversity loss to put nature on a path to recovery for the benefit of people and planet, and to advance relevant targets for social development.
2. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes adherence to the exclusion criteria from the Climate Transition Benchmark (CTB) such as investments in controversial behavior, controversial weapons, and tobacco. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities identified as Transition-related Investments contributing to the climate transition, nature or biodiversity transition and/or social transition.
   More information on the identification of Transition-related Investments is included in the Glossary of Defined Terms section of this Prospectus.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings with an Elevated sustainability risk profile.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and

include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies.

Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Transition Emerging Credits is an actively managed fund that invests in corporate bonds in emerging markets. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund invests at least 80% of the portfolio in Transition-related Investments contributing to climate transition, nature or biodiversity transition and/or social transition:
   a. Investments making the transition: entities identified having credible emission reduction targets, aligning with the goals of the Paris Agreement, and which demonstrate the credibility of those targets. The assessment takes into consideration the company's projected emissions alignment with its required sector decarbonization pathway under a well-below 2°C scenario (regionally adjusted where needed) and whether the company's targets are verified and contain a credible transition plan for achieving its emission-reduction goals. Eligible investments have an 'Aligned' or 'Aligning' Robeco Climate Traffic Light assessment that indicates a credible emissions reduction pathway.
   b. Investments enabling the transition: entities that provide products and services that are needed to make the transition possible. Eligible entities meet measurable KPIs related to product groups or operational activities that Robeco considers to accelerate an economy-wide transition, measured through the Robeco SDG Framework, which identifies to what extent a company contributes to the concrete sub-targets set out by the SDGs. Eligible investments hold a positive score on SDG 7 and/or SDG 13 (contributing to the climate transition), a positive score on SDG 12, 14 and/or SDG 15 (contributing to the nature or biodiversity transition) and/or a positive score on SDG 1 – 6, SDG 8 - 11 and/or SDG 16 and 17 (contributing to the social transition). The framework indicates companies and/or entities that provide solutions to enable climate change mitigation, halt or reverse biodiversity loss and/or advance social development.
   c. Investments financing the transition: eligible Green, Social and/or Sustainability bonds as based on external vendor data or the internally Robeco ESG Bond Frameworks.

2. The Sub-fund invests a minimum of 15% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to

investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

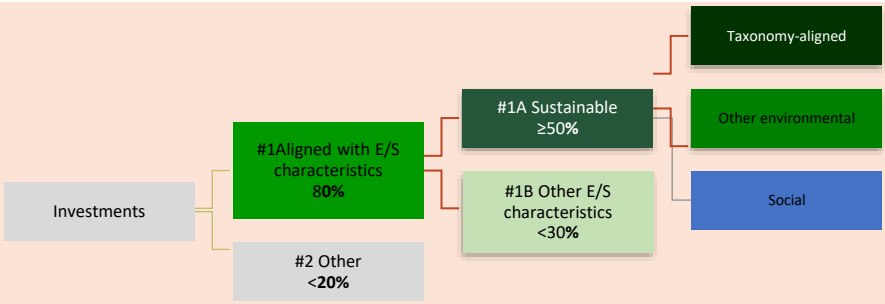
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents, government debt, and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

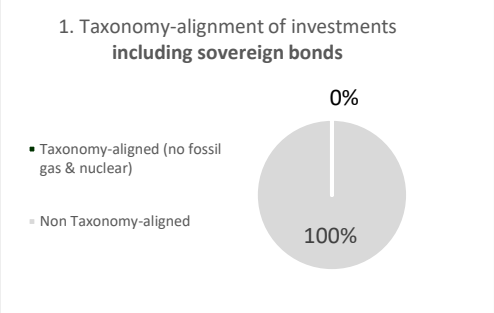
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[78]?

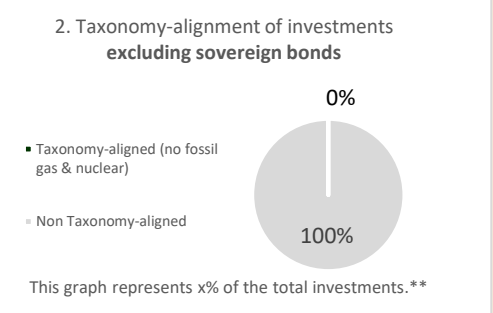
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[78] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social

objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, government bonds, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

n) Robeco Climate Global High Yield Bonds

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.
The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Climate Global High Yield Bonds

Legal entity identifier: 2138005J7Y35MUMDFU85

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☒ **Yes** ●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 50%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aim to reduce the Carbon footprint of the portfolio and thereby contribute towards the goals of the Paris Agreement to keep the maximum global temperature rise well-below 2◦C.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund also promotes investment in Green, Social and/or Sustainability bonds used to finance environmental and social projects.

The sustainable investments made by the Sub-fund will contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted Carbon footprint compared to the Paris-Aligned Benchmark.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the Regulation on EU Climate Benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments are constituents of Solactive Global High Yield Corporate PAB Select Indexor follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses performance on all mandatory PAI indicators on a regular basis. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Yes, the Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Via the Carbon footprint performance target of the Sub-fund, the PAI on Carbon footprint (PAI 2, Table 1) is considered via the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Climate Global High Yield Bonds is an actively managed fund that invests mainly in high yield corporate bonds all around the world. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustain-ability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

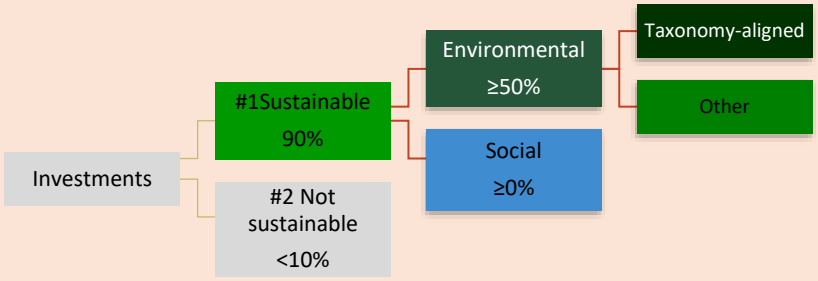
1. The Sub-fund's weighted Carbon footprint is better than the Paris-Aligned Benchmark.
2. The Sub-fund invests a minimum of 2% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
4. The Sub-fund refrains from investing in companies that are excluded on the basis of Article 12 of the Regulation on EU Climate Benchmarks as regards minimum standards for EU Climate Transition Benchmarks and EU Paris-aligned Benchmarks. This includes the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework, sustainable investments that adhere to the Paris-Aligned Benchmark criteria, and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

The percentages mentioned under intended socially sustainable investments and environmentally sustainable investments are minimum percentages. This means that these percentages must be achieved as a minimum, but can also be higher. However, the combined percentage of both types of sustainable investments must always be equal to or higher than the intended minimum percentage of sustainable investments.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

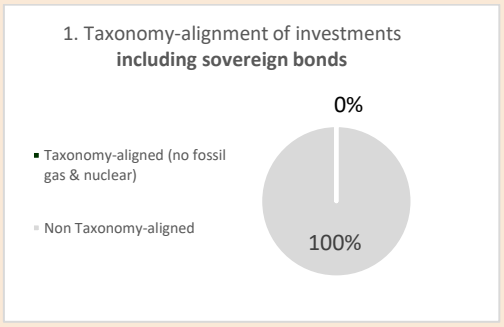
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

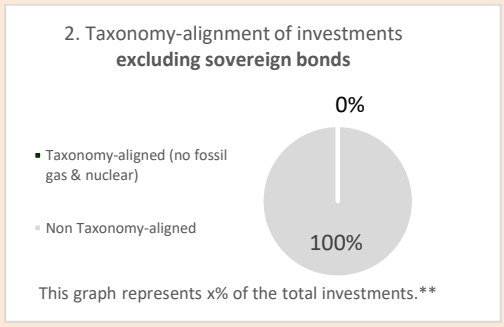
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[79]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[79] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 50%. The Sub-fund however does not commit towards a minimum share of investments that are aligned or not aligned with the EU Taxonomy. The Taxonomy screening criteria are not considered in achieving a minimum percentage of environmentally sustainable investments.

In addition, Green Bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, however the Sub-fund does not intend to set a minimum target. The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Social or Sustainability bonds may invest (part of) the proceeds in economic activities that contribute to a social objective. In addition, it could be possible that some companies contribute to social objectives either by being a part of the Paris-Aligned Benchmark or having a positive score via Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Yes, the Sub-fund follows the Solactive Global High Yield Corporate PAB Select Index as a reference index to meet the Carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their Carbon footprint. The methodology of the reference index is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others for the corporate bond part, the reference index is aligned with those criteria set out in Article 12 of the Regulation on EU Climate Benchmarks. The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's overall weighted Carbon footprint score in each of the government part and the corporate part is better than the respective part of the Solactive Global High Yield Corporate PAB Select Index.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules on a monthly basis for index eligibility and rebalances on a six month basis for decarbonization, which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data sourced from Institutional Shareholder Services Inc for corporate issuers and from the Emissions Database for Global Atmospheric Research (EDGAR) for sovereign issuers.

The Sub-fund follows a rebalancing strategy which ensures that the Carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

How does the designated index differ from a relevant broad market index?

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on decarbonization and on greenhouse gas emission reduction and related exclusions.

Where can the methodology used for the calculation of the designated index be found?

The index methodology can be found on the relevant webpages by the index provider: https://www.solactive.com/indices /

Where can I find more product specific information online?

More product-specific information can be found on the website:

o) Robeco High Income Green Bonds

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco High Income Green Bonds

Legal entity identifier: 213800PLNWH9PVP39A71

Sustainable investment objective

Does this financial product have a sustainable investment objective?

●● ☒ **Yes** ●○ ☐ **No**

☒ It will make a minimum of **sustainable investments with an environmental objective: 80%**

- ☒ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund invests predominantly in Green Bonds, as well as in social and/or Sustainability bonds. With these investments, the Sub-fund finances investments that can contribute to environmental goals like:

- Climate change mitigation and adaptation,
- Sustainable use and protection of water and marine resources,
- Transition to a circular economy,
- Waste prevention and recycling,
- Pollution prevention, and
- Protection of healthy ecosystems.

There is no reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of the Sub-fund invested in Green Bonds.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Green Bonds Principles and their respective Bonds principles.

For a large share of Green, Social and Sustainability bonds, Robeco adds an extra assessment on sustainability factors by applying Robeco's Green Bond Framework or Social Bond Framework.

Via these frameworks, the following adverse impacts are directly considered:

- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

For Green Bonds, there is no disclosures on GHG emissions. Yet, avoided emissions (scope 4 emissions) are considered. For Social bonds, Robeco considers board gender diversity (Table 1, PAI 13) depending on whether the use of proceeds of the social bond will tackle gender diversity issues.

Lastly, Robeco's SDG Framework is considered for the analysis of Green, Social and Sustainability bonds. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI

indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Green, Social and Sustainability bonds are assessed via Robeco's Green Bond Framework and/ or Social Framework, as well as via Robeco's SDG Framework. These frameworks directly and indirectly assess PAI indicators

Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

☐ No

What investment strategy does this financial product follow?

Robeco High Income Green Bonds is an actively managed fund that invests in Green Bonds globally issued by corporates, governments, government-related agencies. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Other bonds that can be invested in are either Social bonds or Sustainability bonds. The strategy integrates sustainability indicators on a continuous basis as part of the investment selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

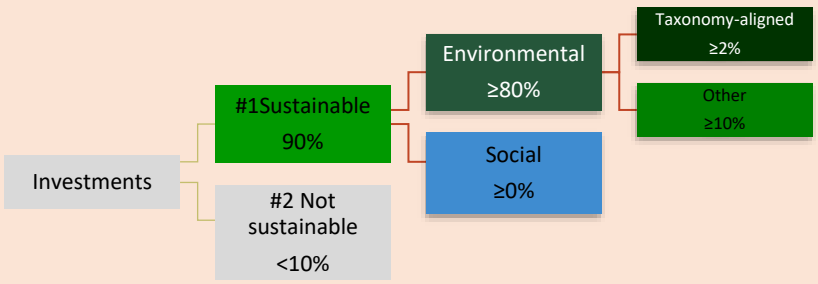
The Sub-fund has the following binding elements:

1. The Sub-fund allocates a minimum of 80% to Green Bonds based on external vendor data or the internally developed framework by Robeco.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The Sub-fund plans to make a minimum of 90% sustainable investments, defined as investments in Green, Social or Sustainability bonds, with a minimum portion of 80% sustainable investments with an environmental objective. These percentages are minimum commitments and the two subsets are not equal to the total minimum proportion of sustainable investments in the asset allocation section. The same apply for the further split of the total minimum of environmentally sustainable investments into the minimum commitments of Taxonomy-aligned and other environmental sustainable investments, where the lack of data availability and coverage also influences the level of the minimum commitments. The investments in the category #2 Not sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

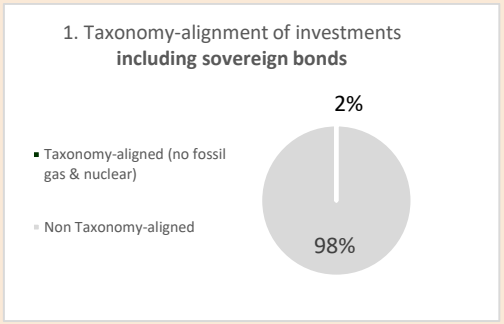
The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy. The Sub-fund commits to a minimum share of 2% of Taxonomy-aligned activities. The Sub-fund uses CapEx as the primary metric for Taxonomy alignment because it reflects the issuers' of use of use of proceed planned investments in environmentally sustainable activities, which is particularly relevant for these transition sectors where current turnover does not capture future alignment. The minimum proportion of Taxonomy-aligned activities shall be calculated covering all assets of the products in

accordance with Article 17 of the EU Taxonomy Regulation. The expected level of alignment with and without sovereign bonds is the same.

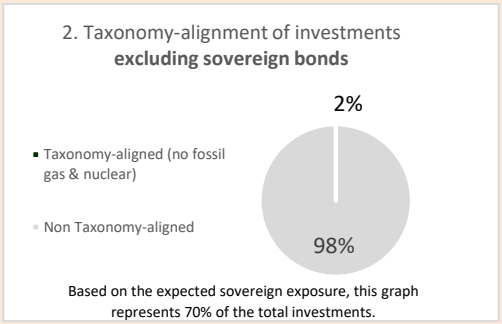
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[80]?



☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*

What is the minimum share of investments in transitional and enabling activities?

0%.

[80] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of sustainable investments with an environmental objective of 80%. Green Bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. The Sub-fund commits to a minimum share of sustainable investments without alignment to the EU Taxonomy of 10% with an other environmental objective because of the current data availability on the EU Taxonomy in the fund market.

What is the minimum share of sustainable investments with a social objective?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. The Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific social investment objective.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

No, the Sub-fund does not designate a reference benchmark since an appropriate index is not available to solely capture the Green Bonds and other use-of-proceeds bonds across the geography, investment segments as designed in the strategy. The sustainable objective of the Sub-fund is met by investing in Green Bonds which help finance/ re-finance projects that have environmental goals clearly highlighted in accordance with ICMA principles.

Where can I find more product specific information online?

p) Robeco Global Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Bonds **Legal entity identifier:** 213800KHKSU4A3TFEX76

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

1. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds used that are used to finance environmental and social projects.

The Sub-fund has the following E/S characteristics for investments in corporate bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

The Sub-fund has the following E/S characteristics for investments in government bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking by setting a minimum eligibility threshold. The Robeco Country Sustainability Ranking incorporates a wide range of factors such as aging, corruption, social unrest, political risks and environmental risks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

1. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the corporate bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The Sub-fund's weighted corporate Carbon footprint compared to the footprint of the General Market Index.
4. The % of holdings with an Elevated sustainability risk profile.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the government bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of the Exclusion policy.
2. The minimum weighted average score on Robeco's Country Sustainable Ranking

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The portion of the sustainable investments are Green, Social and Sustainability bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

For corporate investments, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility framework. As a result, the following adverse impacts are taken into account:

- Table 1, PAI 15 (GHG intensity)

- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds not certified as green under a future EU act setting up an EU Green Bond Standard)

For Corporates, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

For the corporate investments, the sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

To sovereigns and supranationals, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Robeco's Country Sustainability Ranking, used for the fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds not certified as green under a future EU act setting up an EU Green Bond Standard)
- Tabel 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Global Bonds is an actively managed fund that invests globally in bonds and other marketable debt securities and instruments issued or guaranteed by OECD member states and by companies based in OECD countries. The Sub-fund also has the flexibility to invest in Emerging Debt. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and country-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

1. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

The Sub-fund has the following binding elements to attain the E/S characteristics for the corporate bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

The Sub-fund has the following binding elements to attain the E/S characteristics for the government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's portfolio has a minimum weighted average score of at least 6 on Robeco's Country Sustainability Ranking.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

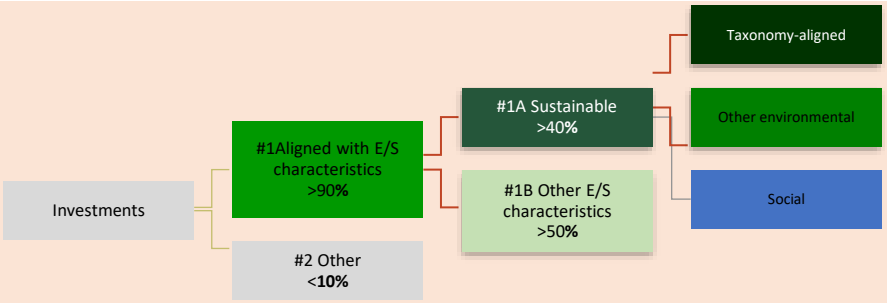
Good governance practices include sound management structures, employee

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry- established

relations, remuneration of staff and tax compliance.

norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 5%in sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section.

Investments in the category 'Other', estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

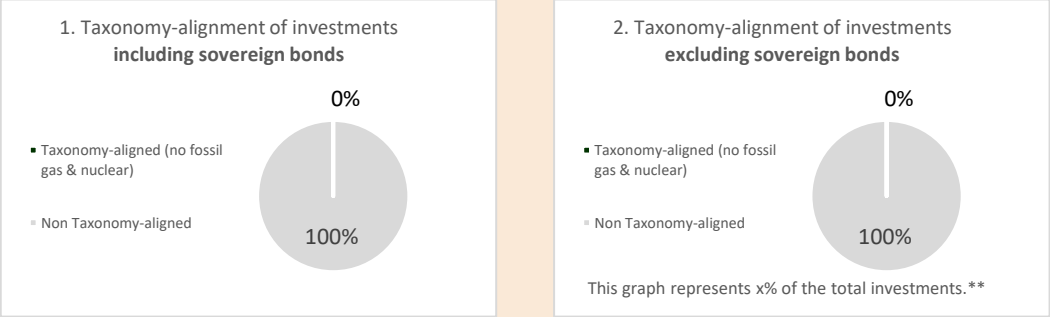
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[81]?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[81] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

q) Robeco QI Global Dynamic Duration

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Global Dynamic Duration

Legal entity identifier: 213800O6XS66TUE3KZ90

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☒ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund has a lower Carbon footprint than the General Market Index (i.e. JPM GBI Global Index IG).
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's portfolio has a better average ESG score on Robeco's Country Sustainability Ranking as compared to the General Market Index
3. The weighted carbon emissions per capita as compared to the General Market Index.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Robeco's Country Sustainability Ranking, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Tabel 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco QI Global Dynamic Duration is an actively managed Sub-fund that invests worldwide in government bonds with investment grade quality. The selection of these bonds is based on quantitative

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies Robeco's good governance and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index.
3. The Sub-fund's weighted carbon emissions per capita is better than that of the General Market Index.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

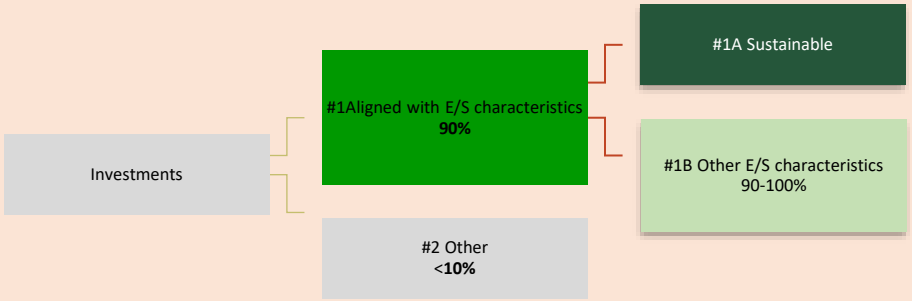
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

The Sub-fund invests in government bonds, to which Robeco's Good Governance policy is not applicable. Robeco does have a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry-established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

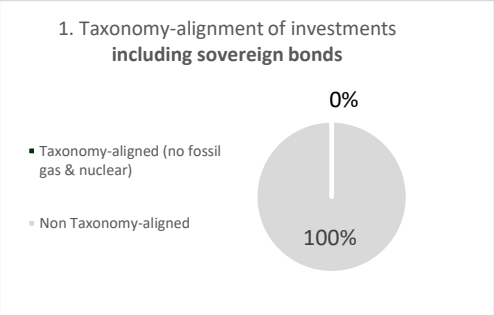
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

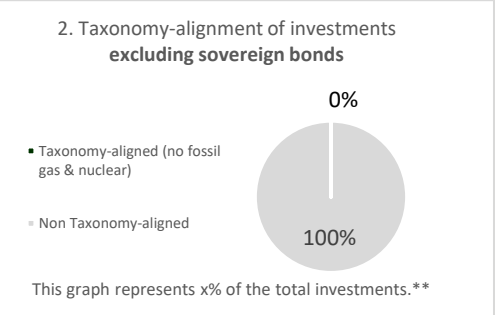
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[82]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[82] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

r) Robeco Emerging Markets Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Emerging Markets Bonds

Legal entity identifier: 213800RAMXCKXFH4DA03

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
2. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The portion of the sustainable investments are Green, Social and Sustainability bonds, and therefore contribute to the environmental or social objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. The portion of the sustainable investments are Green, Social and Sustainability bonds. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will

use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive company SDG scores (+1, +2, +3) are regarded as sustainable investments.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments linked to companies are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, as part of Robeco's Country Sustainability Ranking, used for the fundamental analysis of sovereign bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Green, social and Sustainability bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These frameworks directly and indirectly assess PAI indicators.

Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Emerging Markets Bonds is an actively managed fund that predominantly invests in Hard currency bonds issued by emerging market countries. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index
2. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

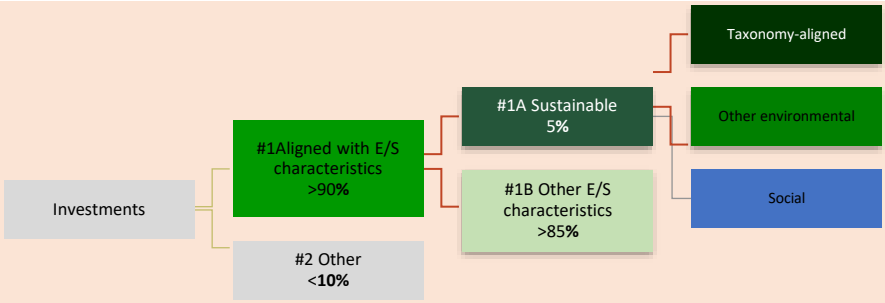
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry- established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 5% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds.

These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

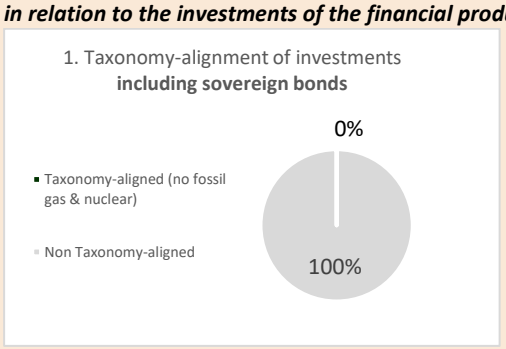
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

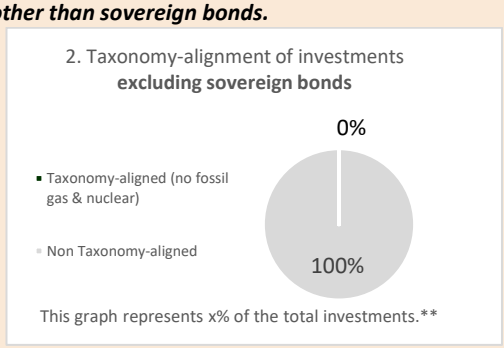
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[83]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[83] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

s) Robeco Emerging Markets Bonds Local Currency

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Emergings Market Bonds Local Currency

Legal entity identifier: 213800308WHTMH21BX88

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
2. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The portion of the sustainable investments are Green, Social and Sustainability bonds, and therefore contribute to the environmental or social objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. The portion of the sustainable investments are Green, Social and Sustainability bonds. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive company SDG scores (+1, +2, +3) are regarded as sustainable investments.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments linked to companies are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy. Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, as part of Robeco's Country Sustainability Ranking, used for the fundamental analysis of sovereign bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Green, social and Sustainability bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These frameworks directly and indirectly assess PAI indicators.

Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Emerging Markets Bonds Local Currency is an actively managed fund that predominantly invests in Local currency bonds issued by emerging market countries. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index
2. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

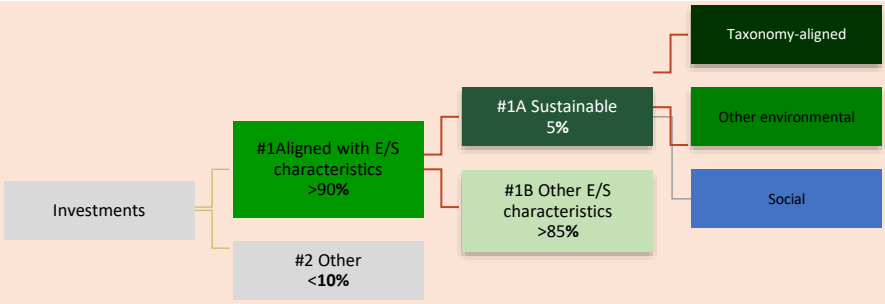
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry- established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 5% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

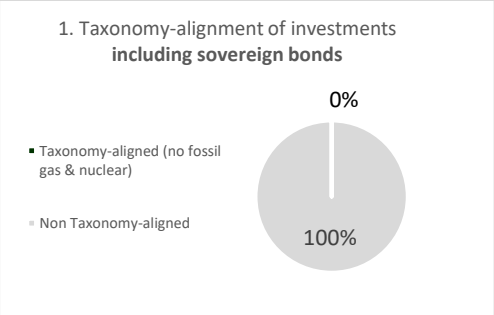
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

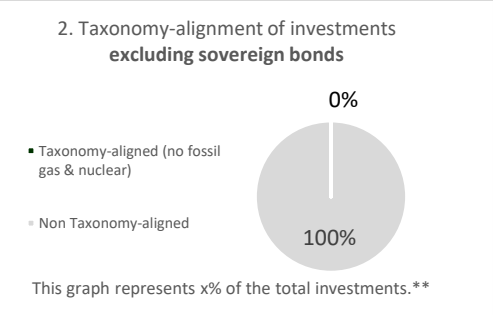
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[84]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[84] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

t) Robeco Global Investment Grade Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Investment Grade Credits

Legal entity identifier: 213800VSTJLMT57MIQ25

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**

- ☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%
  - ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ **No**

- ☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments
  - ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
  - ☒ with a social objective
- ☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of the Sub-fund invested in Green, Social, Sustainability bonds.
4. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to UN SDGs and some of the environmental objectives under EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How have the indicators for adverse impacts on sustainability factors been taken into account?

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the issuer concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the issuer, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account: via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis,

the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Global Investment Grade Credits is an actively managed fund that invests in bonds in a diversified portfolio of global investment grade corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-policy.pdf.

3. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

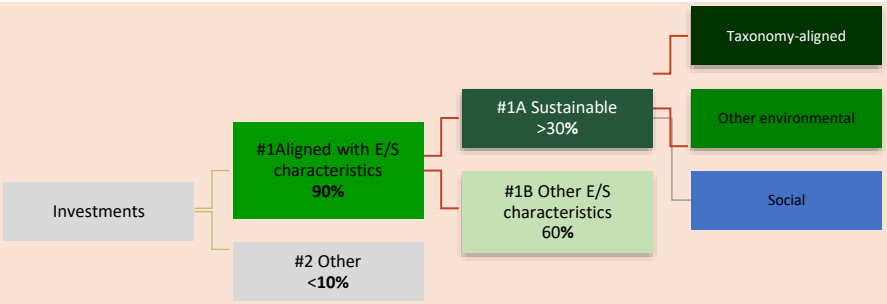
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry- established norms and include topics as employee relations, management structure, tax compliance and remuneration. The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. The sustainable investments aim to contribute to the UN Sustainable Development Goals.

The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an environmental objective but it cannot be ruled out that sustainable investments may include those with an environmental objective. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:
- The sub-category #1A Sustainable covers sustainable investments with environmental or social objectives.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

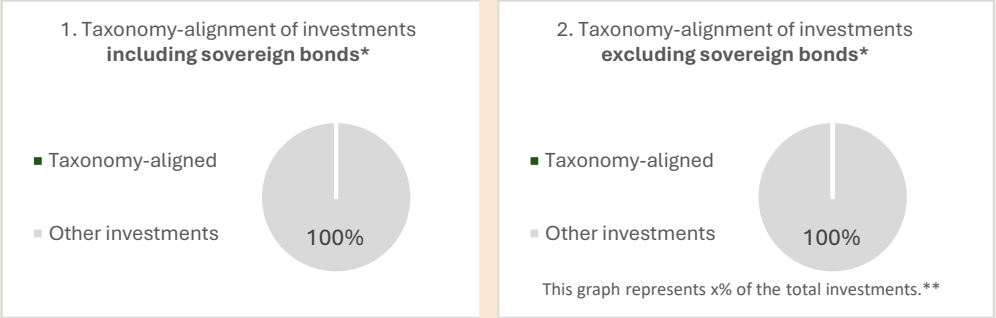
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[85]?

☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[85] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in issuers that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, the

Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. Amongst others, the use of cash, cash equivalents and derivatives is included under "#2 Other". The Sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Where relevant, minimum environmental or social safeguards apply to the underlying securities. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

5. REGIONAL BOND SUB-FUNDS

a) Robeco Euro Government Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Euro Government Bonds

Legal entity identifier: 2138004UVBQIDUAW9R66

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The weighted average score on Robeco's Country Sustainability Ranking.
3. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-fund invests in Green Bonds, Social bonds and/or Sustainability bonds used to finance environmental and social projects. A description of Green bonds, Social Bonds and Sustainability bonds is included in the Glossary of Defined Terms section of this Prospectus.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by applying Robeco's ESG bond eligibility frameworks in the selection process. Robeco's ESG bond eligibility frameworks require that international norms related to social and governance issues are met. Under the frameworks, ESG bond investments are assessed on (i) social safeguards – the issuer respects international Human and Labor Rights, (ii) controversial behavior – the issuer is not in violation of the UN Global Compact, and (iii) sanctions – the issuer is not subject to international sanctions.

To identify whether an issuer is involved in a controversy, ratings and data from external providers are used to aid our in-house monitoring. If a controversy is found, the analyst determines whether this has material impacts on the ESG bond analysis and/or the SDG score. If the controversy is deemed material, the issuer receives a negative SDG Score and the investment is not sustainable.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility framework. As a result, the following adverse impacts are taken into account during the investment analysis as part of Robeco's Green, Social or Sustainability bond eligibility frameworks:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)

As a first step, ESG bonds are assessed in their alignment with standards or principles that exist in the market, such as the International Capital Market Association (ICMA) Green bond principles, the Climate bond initiative (CBI) or international standards as the EU Green Bond Standard (Table 2, PAI 17). As a second step, amongst others, GHG intensity (Table 1, PAI 15) is assessed in the project evaluation that considers the allocation of proceeds. In addition, the ESG bonds are assessed on their compliance with international norms related to social and governance issues (in relation to Table 1, PAI 16). A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As the Sub-fund invest in sovereigns and supranationals, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Country Sustainability Ranking, used for the fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Euro Government Bonds is an actively managed fund that invests predominantly in euro government bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Sub-fund applies country-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's portfolio has a minimum weighted average score of at least 6.5 on Robeco's Country Sustainability Ranking.
3. The Sub-fund invests a minimum of 10% in Green, Social and/or Sustainability bonds.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

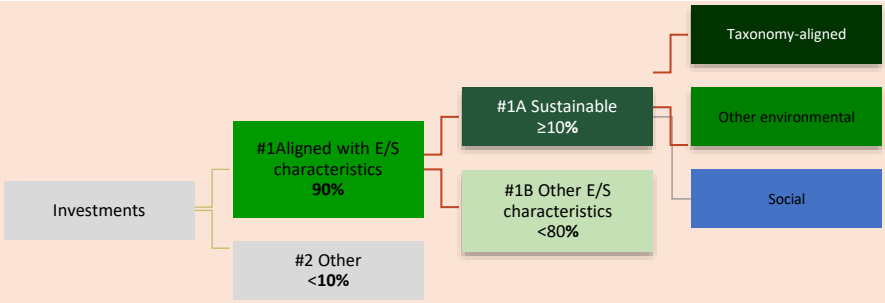
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 10% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

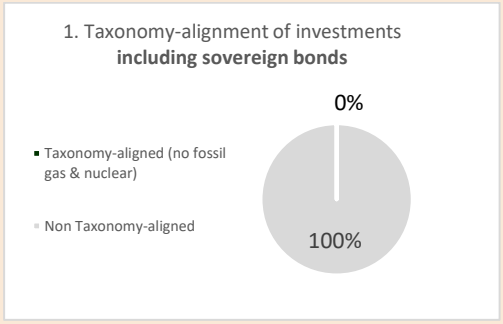
0%.

To comply with the EU Taxonomy, the

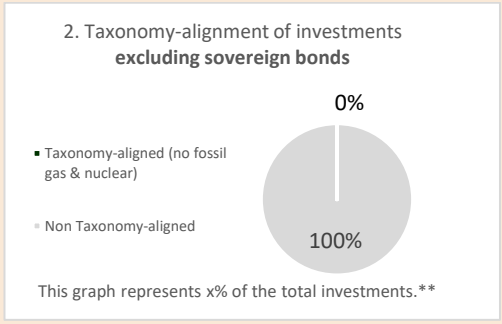
Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[86]?

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.



Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[86] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

b) Robeco Euro Credit Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

●● ☐ **Yes** ●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of holdings with an Elevated sustainability risk profile.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility framework.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Euro Credit Bonds is an actively managed fund that provides a diversified exposure to the euro investment grade credit market. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
3. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.
4. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

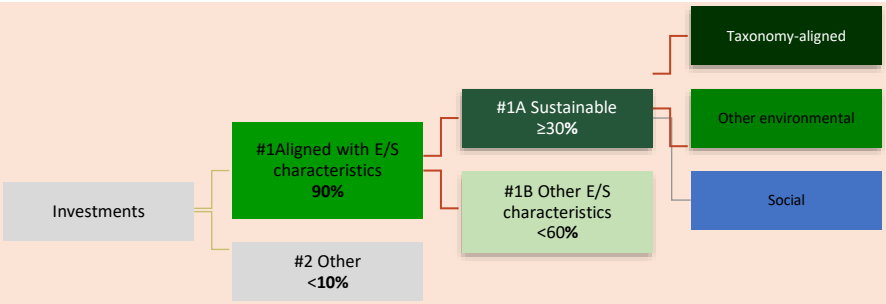
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

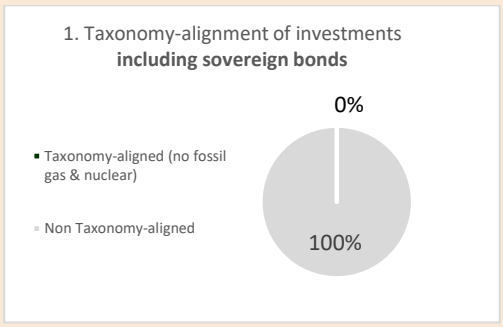
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[87]?

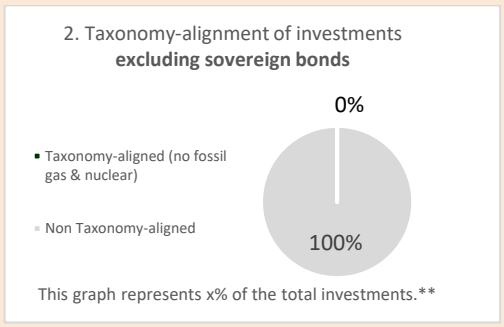
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[87] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as the Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11

(Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

c) Robeco All Strategy Euro Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco All Strategy Euro Bonds

Legal entity identifier: 213800PDS63NUN165C09

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

1. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for investments in corporate bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as exposure to controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

The Sub-fund has the following E/S characteristics for investments in government bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as exposure to controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

1. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the corporate bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The % of corporate holdings with an Elevated sustainability risk profile.
3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the government bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The minimum weighted average score on Robeco's Country Sustainable Ranking.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The portion of the sustainable investments are Green, Social and Sustainability bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

For corporate investments, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility framework. As a result, the following adverse impacts are taken into account:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)

For corporates, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

For the corporate investments, the sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

In addition, the Sub-fund invest in sovereigns and supranationals, for which sustainable investments defined as Green, Social and/or Sustainability bonds from these issuers are not aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Country Sustainability Ranking, used for the fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)
- Table 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco All Strategy Euro Bonds is an actively managed fund that invests primarily in euro-denominated government and non-government bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and country-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

1. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

The Sub-fund has the following binding elements to attain the E/S characteristics for the corporate bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

The Sub-fund has the following binding elements to attain the E/S characteristics for government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's portfolio has a minimum weighted average score of at least 6 on Robeco's Country Sustainability Ranking.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

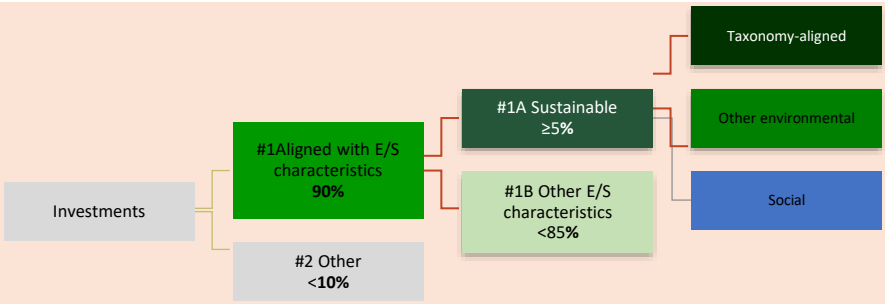
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 5% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. As and when the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

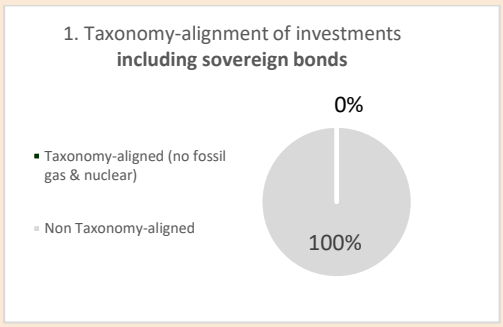
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[88]?

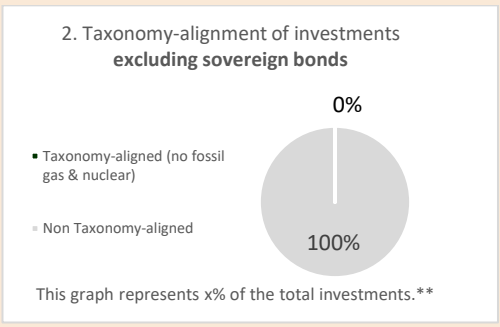
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[88] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

d) Robeco European High Yield Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco European High Yield Bonds

Legal entity identifier: 21380033AH4QAGYE2R38

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco European High Yield Bonds is an actively managed fund that invests in bonds with a sub-investment grade rating, issued primarily by European and US issuers. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 10% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 2% in Green, Social and/or Sustainability bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

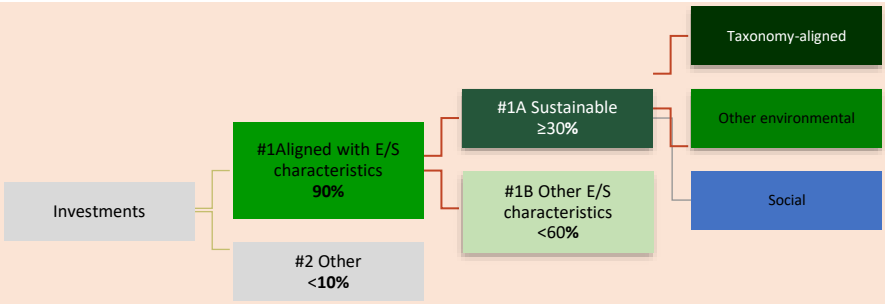
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination ofpositive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

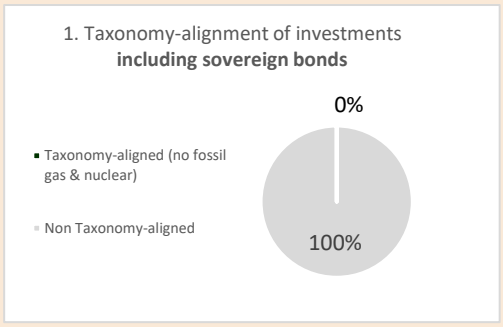
0%.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[89]?

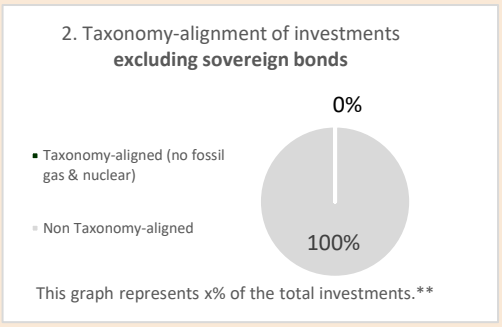
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only



[89] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

e) Robeco Transition Asian Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Transition Asian Bonds

Legal entity identifier: 21380096HMIZ4YU8CM47

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in companies and/or entities that contribute to the climate transition, nature or biodiversity transition and/or social transition. These Transition-related Investments are identified to be making, enabling and/or financing the transitional efforts required to limit global temperature increase to well-below 2°C degrees aligned with the goals of the Paris Agreement, to halt and reverse biodiversity loss to put nature on a path to recovery for the benefit of people and planet, and to advance relevant targets for social development.
2. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
4. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes adherence to the exclusion criteria from the Climate Transition Benchmark (CTB) such as investments in controversial behavior, controversial weapons, and tobacco. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities identified as Transition-related Investments contributing to the climate transition, nature or biodiversity transition and/or social transition.
   More information on the identification of Transition-related Investments is included in the Glossary of Defined Terms section of this Prospectus.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings with an Elevated sustainability risk profile.
5. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework

based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Investments in transition assets can, but do not per se need to be, sustainable investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Transition Asian Bonds is an actively managed fund that invests in corporate and government bonds in Asia. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund invests at least 80% of the portfolio in Transition-related Investments contributing to climate transition, nature or biodiversity transition and/or social transition:
    a. Investments making the transition: entities identified having credible emission reduction targets, aligning with the goals of the Paris Agreement, and which demonstrate the credibility of those targets. The assessment takes into consideration the company's projected emissions alignment with its required sector decarbonization pathway under a well-below 2°C scenario (regionally adjusted where needed) and whether the company's targets are verified and contain a credible transition plan for achieving its emission-reduction goals. Eligible investments have an 'Aligned' or 'Aligning' Robeco Climate Traffic Light assessment that indicates a credible emissions reduction pathway.
    b. Investments enabling the transition: entities that provide products and services that are needed to make the transition possible. Eligible entities meet measurable KPIs related to product groups or operational activities that Robeco considers to accelerate an economy-wide transition, measured through the Robeco SDG Framework, which identifies to what extent a company contributes to the concrete sub-targets set out by the SDGs. Eligible investments hold a positive score on SDG 7 and/or SDG 13 (contributing to the climate transition), a positive score on SDG 12, 14 and/or SDG 15 (contributing to the nature or biodiversity transition) and/or a positive score on SDG 1 – 6, SDG 8 - 11 and/or SDG 16 and 17 (contributing to the social transition). The framework indicates companies and/or entities that provide solutions to enable climate change mitigation, halt or reverse biodiversity loss and/or advance social development.
    c. Investments financing the transition: eligible Green, Social and/or Sustainability bonds as based on external vendor data or the internally Robeco ESG Bond Frameworks.
2. The Sub-fund invests a minimum of 15% in Green, Social and/or Sustainability bonds.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
4. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 5% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

5. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (c) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

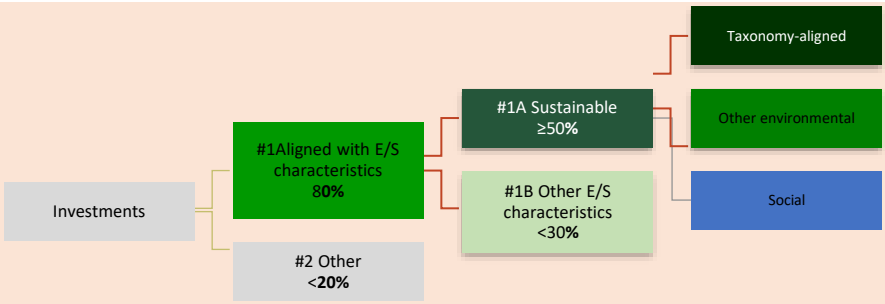
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents, government debt and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

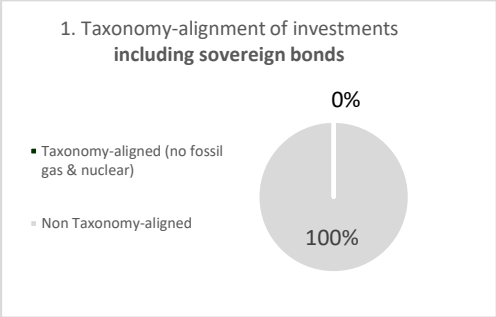
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[90]?

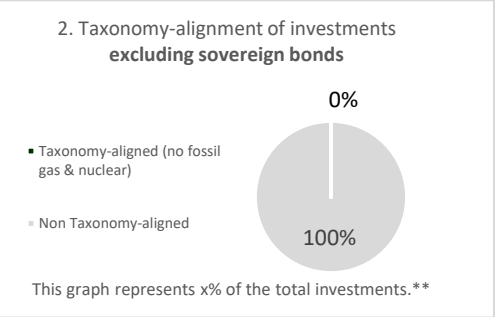
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[90] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%. The Sub-fund does not intend to make investments in transitional and enabling activities as defined under the EU Taxonomy. It cannot be excluded that among the Sub-fund's holdings certain investments, among which the investments in transition assets, are transitional or enabling activities as defined under the EU Taxonomy. The Sub-fund will report on these investments in the periodic disclosures.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, government bonds, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

f) Robeco Euro SDG Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Euro SDG Credits **Legal entity identifier:** 213800MQYJBFHGNZW597

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes** ●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.
4. The Sub-fund promotes adherence to the exclusion criteria from the Paris-Aligned Benchmarks (PAB) rules such as investments in controversial behavior, controversial weapons, and fossil fuels. Therefore, Sub-fund excludes investments in companies referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
4. The % of investments in securities that are excluded as result of the application of the exclusion criteria as referred to in the Regulation on EU Climate Benchmarks.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Euro SDG Credits is an actively managed fund and provides a diversified exposure to the Euro investment grade credit market. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund is invested in bonds that hold a positive or neutral SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 2 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
3. The Sub-fund invests a minimum of 10% in Green, Social and/or Sustainability bonds.
4. The Sub-fund's portfolio complies with the exclusion criteria as referred to in Article 12(1)(a) to (g) of the Regulation on EU Climate Benchmarks. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

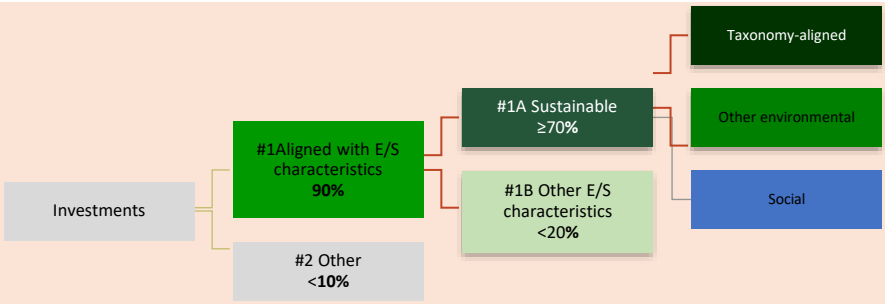
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance



test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

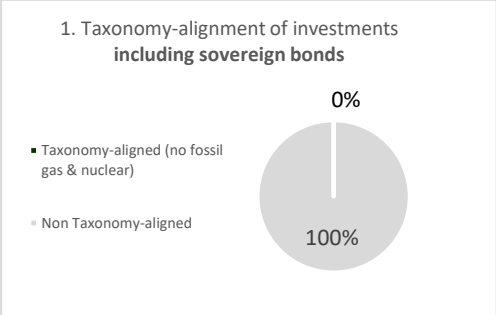
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

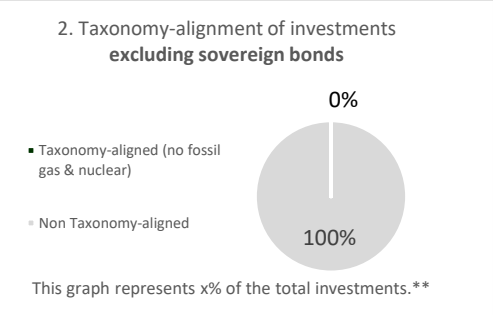
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[91]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[91] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

g) Robeco Financial Institutions Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Financial Institutions Bonds

Legal entity identifier: 213800M7K3R9AYOXVL19

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in Green, Social and/or Sustainability bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are Green Bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))
- Via the ESG Integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
  - All indicators related to GHG emissions, as part of the required Climate Risk Analysis (PAI 1-6, Table 1, PAI 4, Table 2)
  - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis,

the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

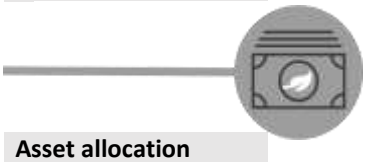
Robeco Financial Institutions Bonds is an actively managed fund that mainly invests in subordinated euro-denominated bonds issued by financial institutions. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. The Sub-fund invests a minimum of 5% in Green, Social and/or Sustainability bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?



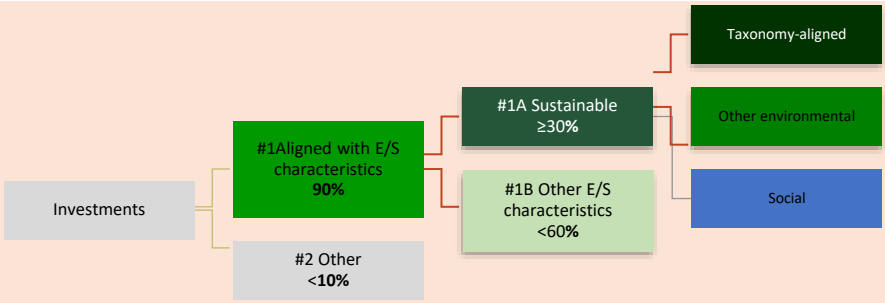
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination ofpositive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

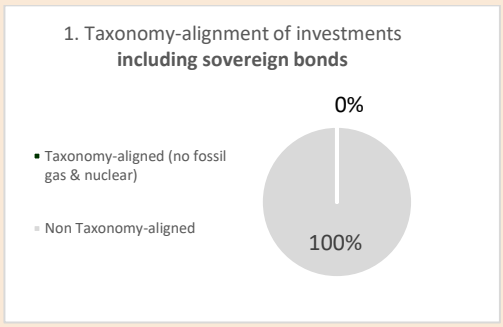
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[92]?

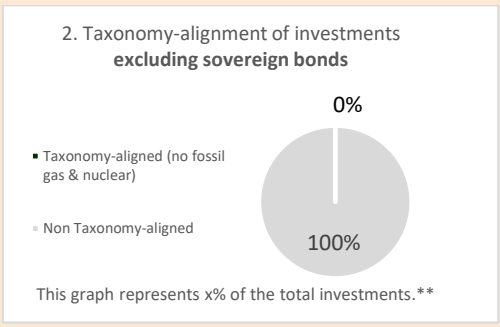
☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No



[92] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8

(Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:
https://www.robeco.com/en/funds/

h) Robeco Euro Short Duration Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Euro Short Duration Bonds

Legal entity identifier: 213800YAYEQ8JA643775

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes**

●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☒ with a social objective

☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in Green, Social and/or Sustainability bonds used to finance environmental and social projects.
3. The Fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
4. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The % of the Sub-fund invested in Green, Social and/or Sustainability bonds.
3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
4. The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainability bonds, significant harm is avoided by the application of Robeco's Green, Social or Sustainability bond eligibility framework. As a result, the following adverse impacts are taken into account during the investment analysis as part of Robeco's Green, Social or Sustainability bond eligibility frameworks:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds that do not classify as Green Bonds)

As a first step, ESG bonds are assessed in their alignment with standards or principles that exist in the market, such as the International Capital Market Association (ICMA) Green bond principles, the Climate bond initiative (CBI) or international standards as the EU Green Bond Standard (Table 2, PAI 17). As a second step, amongst others, GHG intensity (Table 1, PAI 15) is assessed in the project evaluation that considers the allocation of proceeds. In addition, the ESG bonds are assessed on their compliance with international norms related to social and governance issues (in relation to Table 1, PAI 16). A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the issuer concerned has been involved in any controversies.

Involvement in any controversy will result in a negative SDG score for the issuer, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

☒ Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Euro Short Duration Bonds is an actively managed fund that invests in bonds denominated in the EURO currency. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund invests a minimum of 2.5% in Green, Social and/or Sustainability bonds (ESG-labelled bonds). As a second step, amongst others, GHG intensity (Table 1, PAI 15) is assessed in the project evaluation that considers the allocation of proceeds. In addition, the ESG bonds are assessed on their compliance with international norms related to social and governance issues (in relation to Table 1, PAI 16).
3. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
4. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

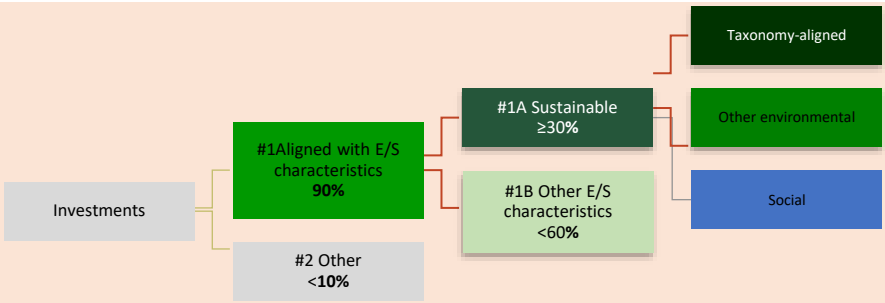
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by a combination of positive scores via Robeco's SDG Framework and investments in Green, Social or Sustainability bonds. The sustainable investments aim to contribute to the UN Sustainable Development Goals. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section.

The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an environmental objective but it cannot be ruled out that sustainable investments may include those with an environmental objective. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

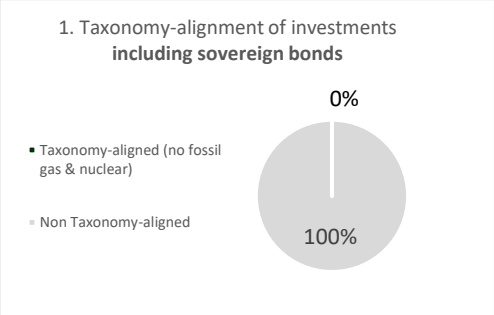
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

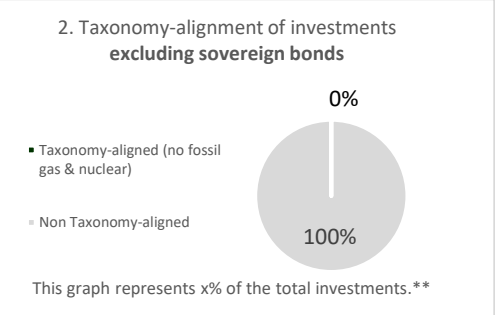
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[93]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures*
*** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.*

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[93] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social or Sustainability bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.
The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

6. ASSET ALLOCATION SUB-FUNDS

a) Robeco Dynamic Allocation

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Dynamic Allocation **Legal entity identifier:** 213800GWKC7Z8TN6R360

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☒ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.

2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The number of holdings and agenda items voted.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering principal adverse impacts and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behaviour in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

Robeco Dynamic Allocation is an actively managed global multi asset fund. The Sub-fund's objective is to achieve a better return than the index. The Sub-fund has a relatively high risk profile and uses asset allocation strategies mainly investing directly in equities and taking exposure to other asset classes such as, but not exclusively, bonds, deposits and money market instruments. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), based on certain exclusion criteria that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that of the General Market Index.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity

or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

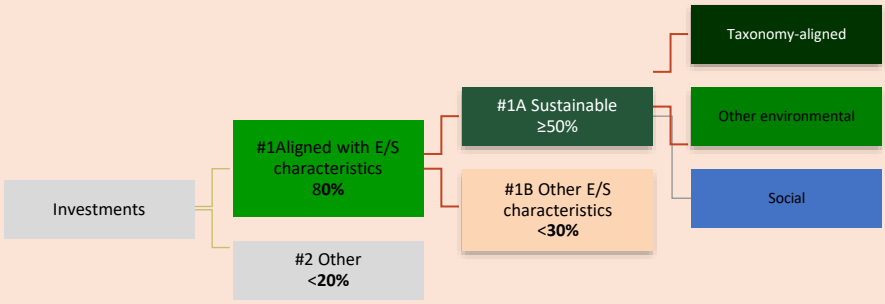
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

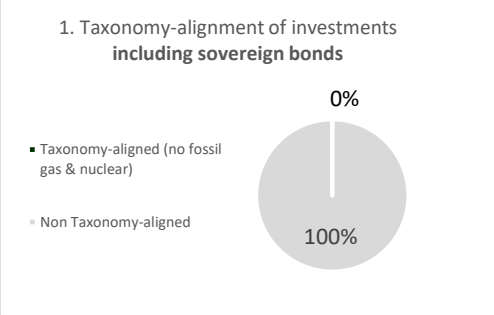
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

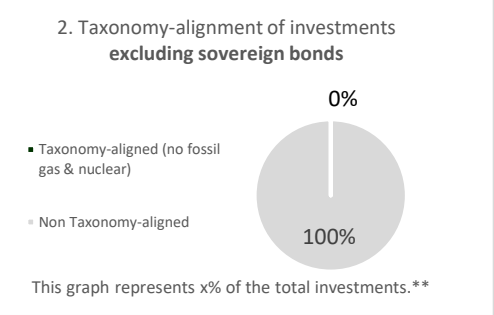
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[94]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentaly sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[94] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, the Sub-fund does not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website:

b) Robeco High Income Allocation

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco High Income Allocation

Legal entity identifier: 213800SXP6WFIGLUYC39

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☒ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 25% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☐ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes having a weighted average Robeco Country Sustainability Ranking score that is better than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behaviour, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score compared to the General Market Index.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of

Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The number of holdings and agenda items voted.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering principal adverse impacts and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-2024-en.pdf). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the

International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for

any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behaviour in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco High Income Allocation is an actively managed fund that invests in a mix of asset classes across the world. The Sub-fund's objective is to achieve long term capital growth whilst maintaining a consistent level of income. The Sub-fund has a relatively low risk profile and uses asset allocation strategies mainly investing directly in bonds and taking exposure to other asset classes such as, but not exclusively, equities. The asset allocation strategy is subject to investments and volatility restrictions. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), based on certain exclusion criteria that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's weighted average Robeco Country Sustainability Ranking score is better than that

of the General Market Index.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. This includes any company that is in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

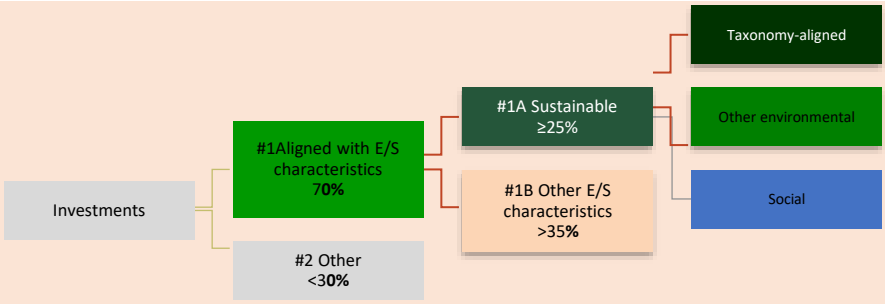
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 25% sustainable investments, measured by either positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-30%, are mostly in cash, cash equivalents and derivatives as further described below as well as investment funds and eligible asset classes other than bonds and equities that do not specifically promote E/S characteristics. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

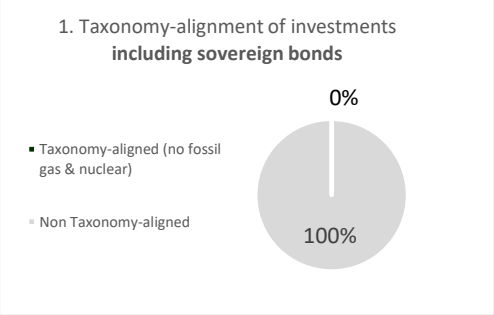
0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

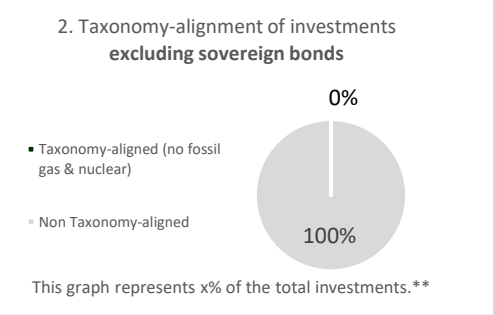
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentaly sustainable economic activities under the EU Taxonomy.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?[95]



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

0%.

[95] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

c) Robeco Flexible Allocation

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Flexible Allocation **Legal entity identifier:** 213800K1HHD25EVUAK49

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ **Yes** ●○ ☒ **No**

☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective:** ___%

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries with minimum average scores on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund promotes good governance and sustainable corporate practices through Proxy Voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's Proxy Voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The average ESG score on Robeco's Country Sustainable Ranking.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.

2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.
4. The number of holdings and agenda items voted.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1))

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1)
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Flexible Allocation is an actively managed global multi asset fund. The aim of the Sub-fund is to achieve long term capital growth by taking global exposure to asset classes such as equities, bonds, deposits, Alternative Investments and/or other generally accepted asset classes. The Sub-fund applies a flexible allocation strategy, which means the Sub-fund's portfolio composition will be determined and adjusted based on market conditions. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (hhttps://www.robeco.com/files/docm/docu-exclusion-policy.pdf), based on certain exclusion criteria that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's investments have a minimum average ESG score of 6 on the Robeco Country Sustainability Ranking.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% investments in excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at https://www.robeco.com/files/docm/docu-stewardship-approach-and-guidelines.pdf.

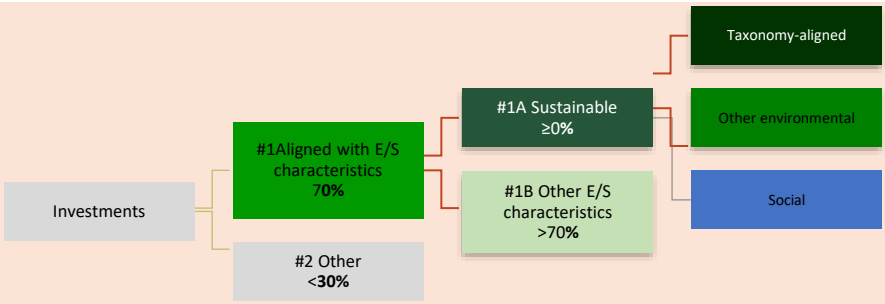
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry- established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-30%, are mostly in cash, cash equivalents and derivatives as further described below, as well as investment funds and eligible asset classes other than bonds and equities that do not specifically promote E/S characteristics. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

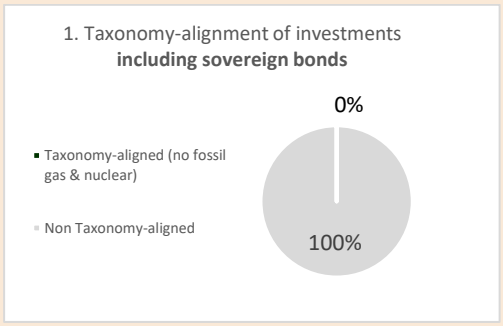
To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

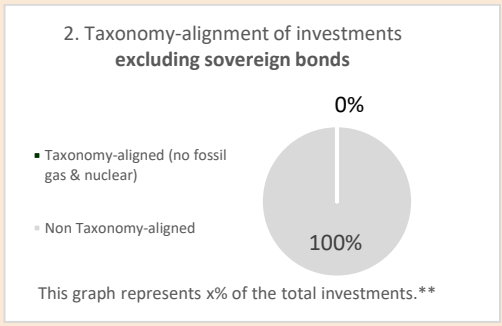
To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[96]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

[96] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

0%

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

d) Robeco Global Target Maturity Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Global Target Maturity Bonds

Legal entity identifier: TBD

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ **Yes**	☒ **No**
☐ It will make a minimum of **sustainable investments with an environmental objective: ___%** ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective: ___%**	☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1).
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)).

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1).
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3).
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for

engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Global Target Maturity Bonds is an actively managed fund that invests in bonds denominated in the EURO/USD currency. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy and considers Principal Adverse Impacts in the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

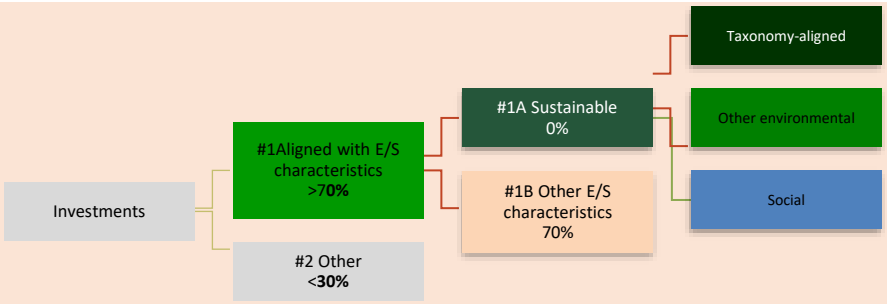
The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/docm/docu-exclusion-list.pdf.



What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-30%, are mostly in cash, cash equivalents and derivatives as further described below, as well as investment funds and eligible asset classes other than bonds and equities that do not specifically promote E/S characteristics. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to

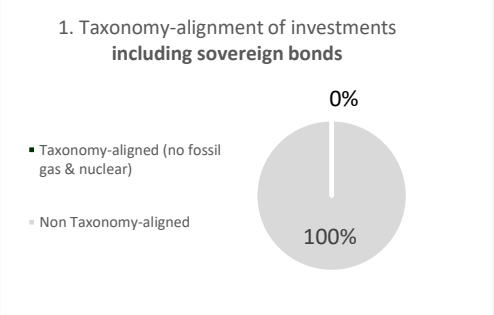
Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[97]?

☐ Yes

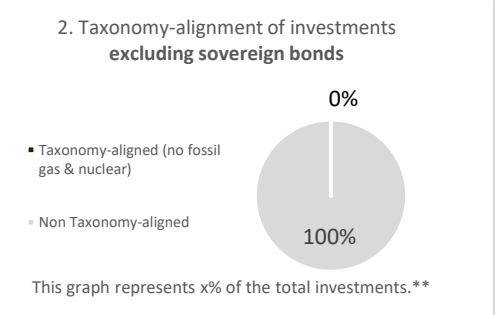
☐ In fossil gas ☐ In nuclear energy

☒ No

97 Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.



renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.



Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. Amongst others, the use of cash, cash equivalents and derivatives is included under "#2 Other". The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as

investment purposes (in line with the investment policy). Where relevant, minimum environmental or social safeguards apply to the underlying securities.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

e) Robeco Step-in Global Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activitie**s. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Step-in Global Equities **Legal entity identifier**: TBD

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

●● ☐ Yes ●○ ☒ No

☐ It will make a minimum of **sustainable investments with an environmental objective: ___%**

- ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It will make a minimum of **sustainable investments with a social objective: ___%**

☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments

- ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- ☐ with a social objective

☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes investment in countries with minimum average scores on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The average ESG score on Robeco's Country Sustainable Ranking.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1).

human rights, anti-corruption and anti-bribery matters.

- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)).

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1).
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3).
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco Step-in Global Equities is an actively managed global multi asset fund. The aim of the Sub-fund is to achieve long term capital growth by initially investing in fixed income assets and gradually increasing the exposure to global equity over time. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), based on certain exclusion criteria that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. The Sub-fund's investments have a minimum average ESG score of 6 on the Robeco Country Sustainability Ranking.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

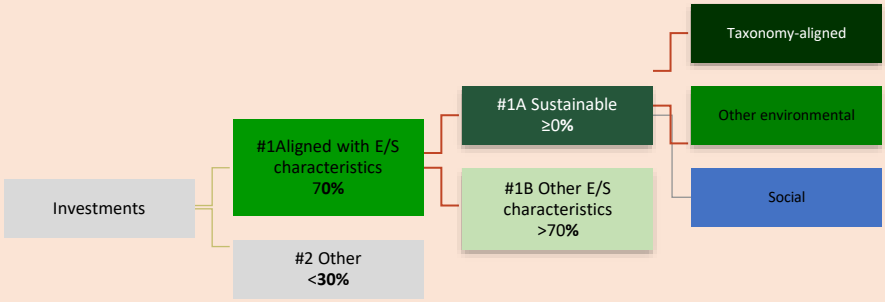
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-30%, are mostly in cash, cash equivalents and derivatives as further described below, as well as investment funds and eligible asset classes other than bonds and equities that do not specifically promote E/S characteristics. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global equity, fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

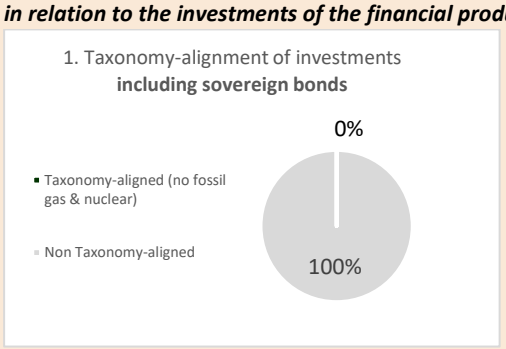
0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

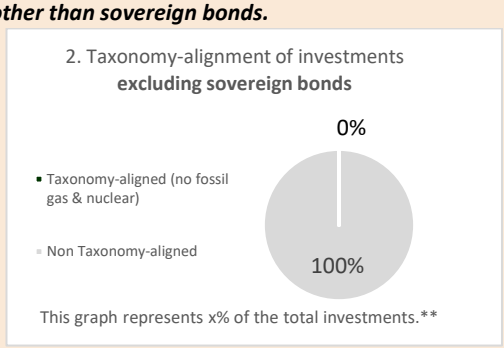
Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[98]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

[98] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

0%

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

f) Robeco Step-in Income Allocation

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco Step-in Income Allocation

Legal entity identifier: TBD

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

☐ Yes	☒ No
☐ It will make a minimum of **sustainable investments with an environmental objective:** ___%	☐ It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of _% of sustainable investments
☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
	☐ with a social objective
☐ It will make a minimum of **sustainable investments with a social objective:** ___%	☒ It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes investment in countries with minimum average scores on the Robeco Country Sustainability Ranking. The Robeco Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an Elevated sustainability risk based on ESG risk scores whereas all such investments require approval from the Sustainable Investment Center of Expertise that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The average ESG score on Robeco's Country Sustainable Ranking.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of holdings that are in violation of the UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence become a part of the Enhanced Engagement program.
3. The % of holdings with an Elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The Sub-fund does not intend to make investments considered as sustainable investments as defined under SFDR.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

☒ Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
  - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1).
  - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
  - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)).

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
  - All indicators related to GHG emissions (PAI 1-6, Table 1).
  - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3).
- Via Robeco's entity engagement program, the following PAIs are considered:
  - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1).
  - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
  - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year before 30 April of the following calendar year at the Sub-fund page highlighted in the final section of this document.

☐ No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment

Robeco Step-in Income Allocation is an actively managed global multi asset fund. The aim of the Sub-fund is to achieve long term capital growth by initially investing in low-risk fixed income assets and gradually increasing the global exposure to asset classes such as equities, bonds, and other fixed income securities, deposits, and/or other generally accepted asset classes, aiming higher levels of income.

The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due

objectives and risk tolerance.

diligence of external funds.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf), based on certain exclusion criteria that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund's holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. The Sub-fund's investments have a minimum average ESG score of 6 on the Robeco Country Sustainability Ranking.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy Level 1 (https://www.robeco.com/files/docm/docu-exclusion-policy.pdf) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society, such as investments in controversial behavior, controversial weapons, and certain fossil fuel-related activities. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at https://www.robeco.com/files/docm/docu-exclusion-list.pdf.
2. The Sub-fund holdings become a part of the Enhanced Engagement program if there is a breach to one of the international guidelines during the investment period: ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. Investments with an Elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via https://www.robeco.com/docm/docu-robeco-sustainability-risk-policy.pdf). The Sub-fund is limited to a maximum exposure of 3% to investments with an Elevated sustainability risk. Each investment with an ESG Risk rating of higher than 40 requires approval by the Sustainable Investment Center of Expertise.

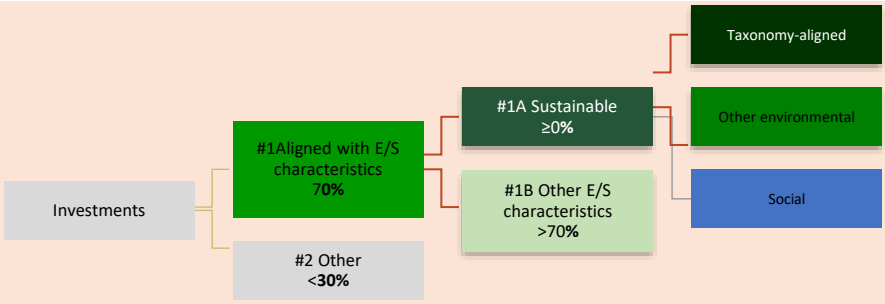
What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for the Sub-fund. Robeco's Good Governance policy applies tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.



The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - https://www.robeco.com/files/docm/docu-exclusion-list.pdf.

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund does not plan to make sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in Green, Social or Sustainability bonds. These percentages are minimum commitments. Hence the two subsets do not equal the total minimum proportion of sustainable investments in the asset allocation section. The investments in the category Other, estimated between 0-30%, are mostly in cash, cash equivalents and derivatives as further described below, as well as investment funds and eligible asset classes other than bonds and equities that do not specifically promote E/S characteristics. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

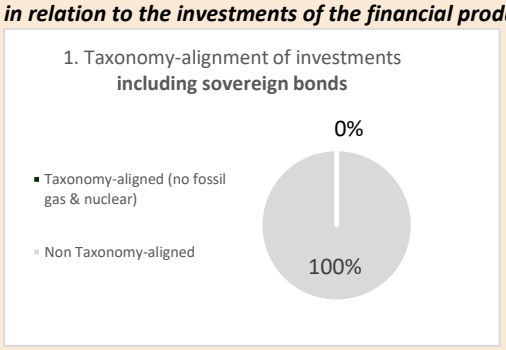
The category **#1 Aligned with E/S characteristics** covers:
- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

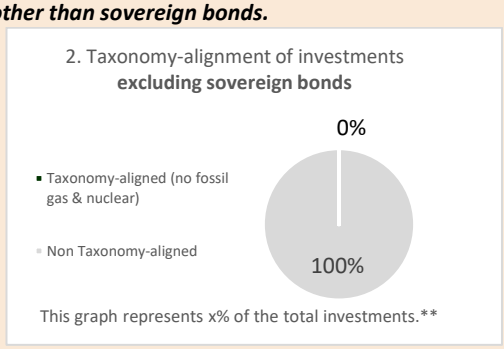
The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global equity, fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%.



Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy[99]?



☐ Yes

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

**** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures***
***** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.***

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

[99] Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

corresponding to the best performance.

What is the minimum share of investments in transitional and enabling activities?
0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund does not commit towards a minimum percentage of sustainable investments with an environmental objective; therefore, the Sub-fund does not commit to a minimum percentage of investments that are aligned or not aligned with the EU Taxonomy.

What is the minimum share of socially sustainable investments?

0%

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.
