Cash (EUR)	0.2%	0.5%	0.3%	2.2%	3.2%	1.9%

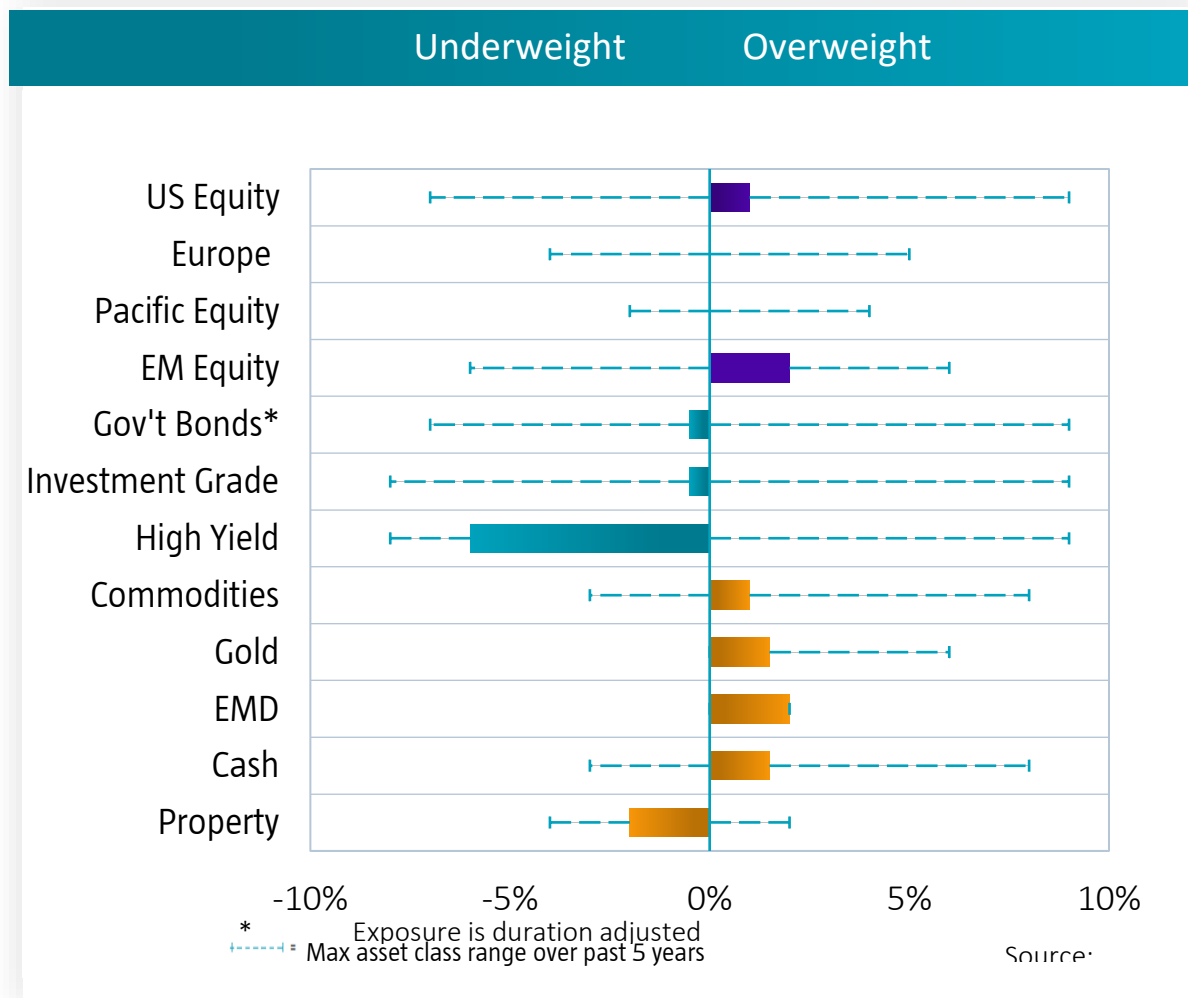

Rotation and cyclical upswing continues

- > In February 2026, global financial markets were defined by a sharp rotation out of "Big Tech" and a rally in defensive, cyclicals and commodities, and real estate assets. The action happened within the MSCI World Index, which advanced 1.5%, while the S&P 500 fell 0.8%. Japanese markets surged over 10% following PM Sanae Takaichi's supermajority victory, and European equities reached record highs.
- > Growing anxiety over white-collar labor displacement by AI and the "return on capex" triggered a pivot towards old economy sectors. Private assets impacted by concern over the software royalty annuity model caused credit spreads to widen.
- > Intensifying Middle East tensions and tariff uncertainty drove oil and gold higher, while U.S. Treasuries rallied, pushing the 10-year yield below 4%. Central banks mostly stayed on hold, except the Reserve Bank of Australia. Despite a hot U.S. PPI report, bonds focused on growth risks rather than inflation, reinforcing dovish market sentiment.

Investment Solutions multi-asset strategy positions (50:50 portfolio)

Improving cyclical outlook in EAFE supporting long equity view

- > Our base case of late cycle upswing was the main narrative during February and we added to equities. However, by the end of month concerns about US tariff reaction and rising tensions in the Middle East, led us to reduce the equity overweight.
- > The narrative around derating of USD is very bearish, while good earnings and lower valuations encouraged us to avoid an underweight in US equities.
- > We can see events unfolding that could lead to a USD countertrend rally, but we hold our greenback underweight and looking for opportunity to add.
- > We continue to like the metals complex, both gold and industrial, as we enter the late cycle upswing with the added benefits of lower correlation and inflation protection.

Theme of the month

The dollar's countertrend pulse; how geopolitics could revive the greenback

Iran conflict prompts burst of USD strength

- > Since the start of the year, the equity market has clearly broadened out beyond technology stocks. The equal-weighted S&P 500 is outperforming its cap-weighted counterpart. Value and momentum stocks, materials and industrials have rallied further.
- > While this 'non-tech rally' fully aligns with our 2026 'Synchronized Shift' theme of a broadening acceleration in global real activity, a spanner has been thrown into the works by the US military action in Iran. In response, high beta momentum trades have seen a swift reversal in favor of more defensive plays. One of those momentum trades has been the short dollar trade.
- > Since the start of the US military action towards Iran on 28 February, we have seen the dollar stage a comeback, up 1.5% as of 5 March. Does this dollar bounce have legs? The answer to this is critical, as correlations show that a sustained reversal in the trajectory of the greenback could challenge continued outperformance of non-US markets and a broad segment of the multi-asset universe.

Stronger dollar negatively correlated with risky assets

Theme of the month

The dollar's countertrend pulse; how geopolitics could revive the greenback

Countertrend rallies are common in dollar bear markets

- > The world's most traded currency is still overvalued by 12% on our favorite valuation metric, its deviation from trend in relative purchasing power parity (PPP). While we believe the dollar remains in a secular bear market (which it entered in 2022), countertrend rallies are common.
- > Looking at previous secular dollar bear markets, characterized by peak to troughs in excess of 20% and multi-year downward price trends, we find that on average, three countertrend rallies took place within a secular bear market. We define this as a multi-month rally generating a return in excess of 5%. A countertrend rally lasted on average for three months, with an average return of 8.2%.

A countertrend rally typically sees an 8% return in 3 months

Theme of the month

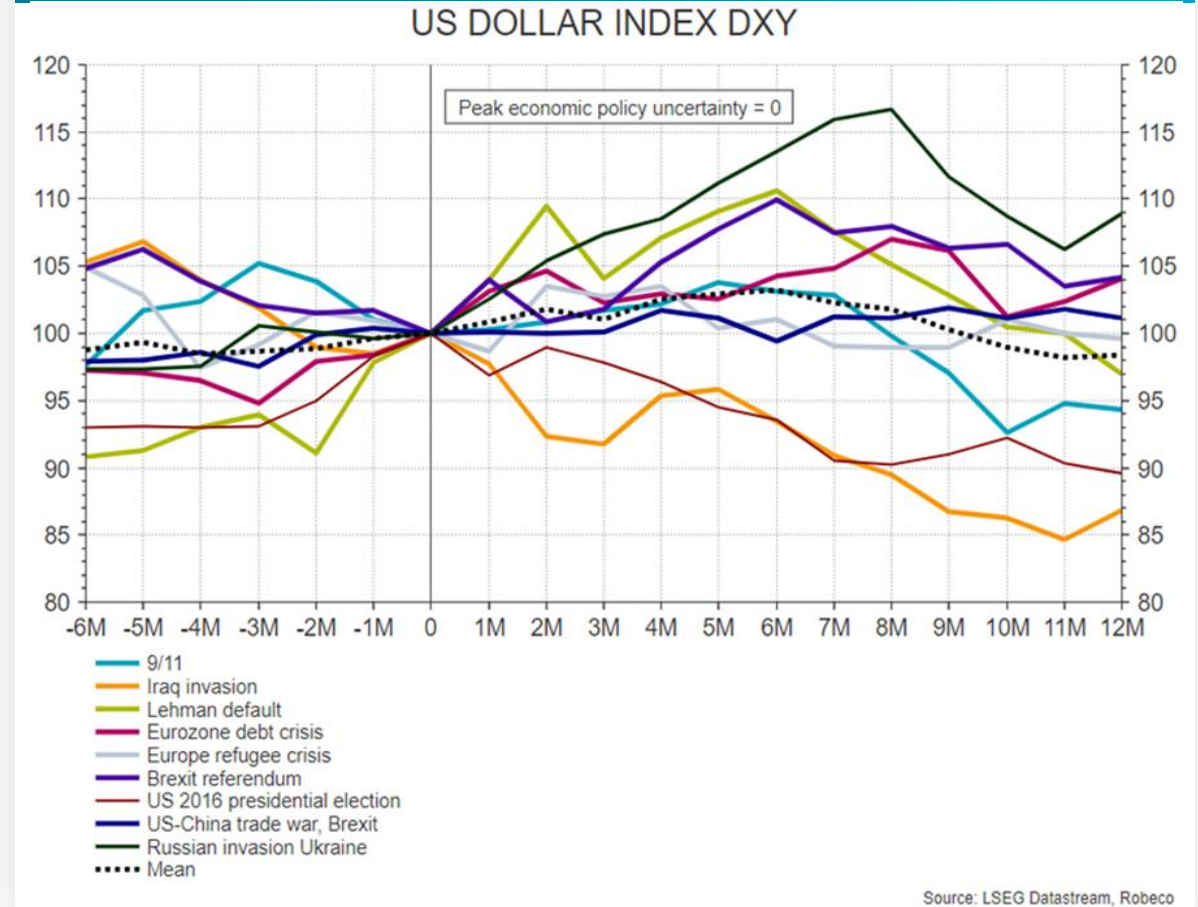

Dollar dusting off some of its haven appeal

Why a countertrend rally in the dollar ?

- > First, positioning and flow dynamics favor a dollar bounce against the backdrop of elevated tensions in the Middle East. Asset managers went into the conflict with a historically large underweight position in the dollar; the flipside of this is that they had historically overweight positions in emerging market equities. This makes investors more sensitive to being on the wrong side of the trade.
- > The longer that Middle East tensions last, the larger the scramble for liquidity becomes, favoring the dollar, as it is involved in 89% of global FX transactions. We find that the trade-weighted dollar tends to strengthen in the 3-6 month window after big geopolitical events.
- > Second, as bombs flew over Iran in a show of US hegemony, the dollar turned positive. Its positive correlation with the VIX volatility index, which was notably absent in the immediate aftermath of President Trump's so-called 'Liberation day' last year, returned. As such, the dollar is dusting off some of its lost appeal as a safe haven.

Dollar tends to appreciate 3-6 months after major geopolitical events

Theme of the month

Dollar has undershot rate differentials

Retail buyers can do more but we are cautious near-term

- > Third, the trade-weighted dollar could strengthen as it has undershot rate differentials, especially against the euro. On our metric, the dollar is around 3 cents too cheap versus the euro when looking at two-year rate differentials between the US and the Eurozone. Hence, EURUSD should trade at around 1.13.
- > We find that the shock to prices on the Title Transfer Facility (TTF) futures exchange following the closure of the world's largest LNG plant in Qatar raises Eurozone gas prices with a lag of 2-9 months. This coming uptick to headline inflation was reflected in the upward shift in the ECB futures curve last week.
- > Still, the market could overestimate the hawkishness of the European Central Bank at this juncture, as it tends to look through negative supply shocks. Also, risks to an ongoing expansion of the Eurozone have become more skewed to the downside in the wake of the Iran war. A recognition of the ECB's unwillingness to hike could therefore contribute to dollar strength.

USD 3 cents too cheap on rate differentials with EUR

Source: LSEG Datastream, Robeco

Theme of the month

Dollar has undershot growth differentials

Stronger dollar would ease affordability crisis

- > Fourth, on growth differentials, we find that the dollar has recently significantly undershot the difference between US and German industrial production data. With Europe being more susceptible to an oil price shock, as it is a net importer, whereas the US is a net energy exporter, growth differentials could further favor the dollar.
- > Fifth, during the second Trump presidency we have so far seen a remarkable alignment of the dollar with its evolution during his first from 2017-2021. If the future were to rhyme again with the playbook of the first Trump administration from here onwards, we could be very close to a strengthening dollar (as shown in the chart on slide 9).
- > While contrasting the publicly voiced preference from the US administration for a weaker dollar in the medium term, a temporary stronger dollar could also be welcomed as the November mid-term elections draw closer. A stronger dollar, while exerting a tightening effect on US export growth, would lower import inflation and therefore potentially mitigate the affordability crisis through real disposable income growth, appeasing part of the Republican electorate.

Dollar has undershot growth differentials

Theme of the month

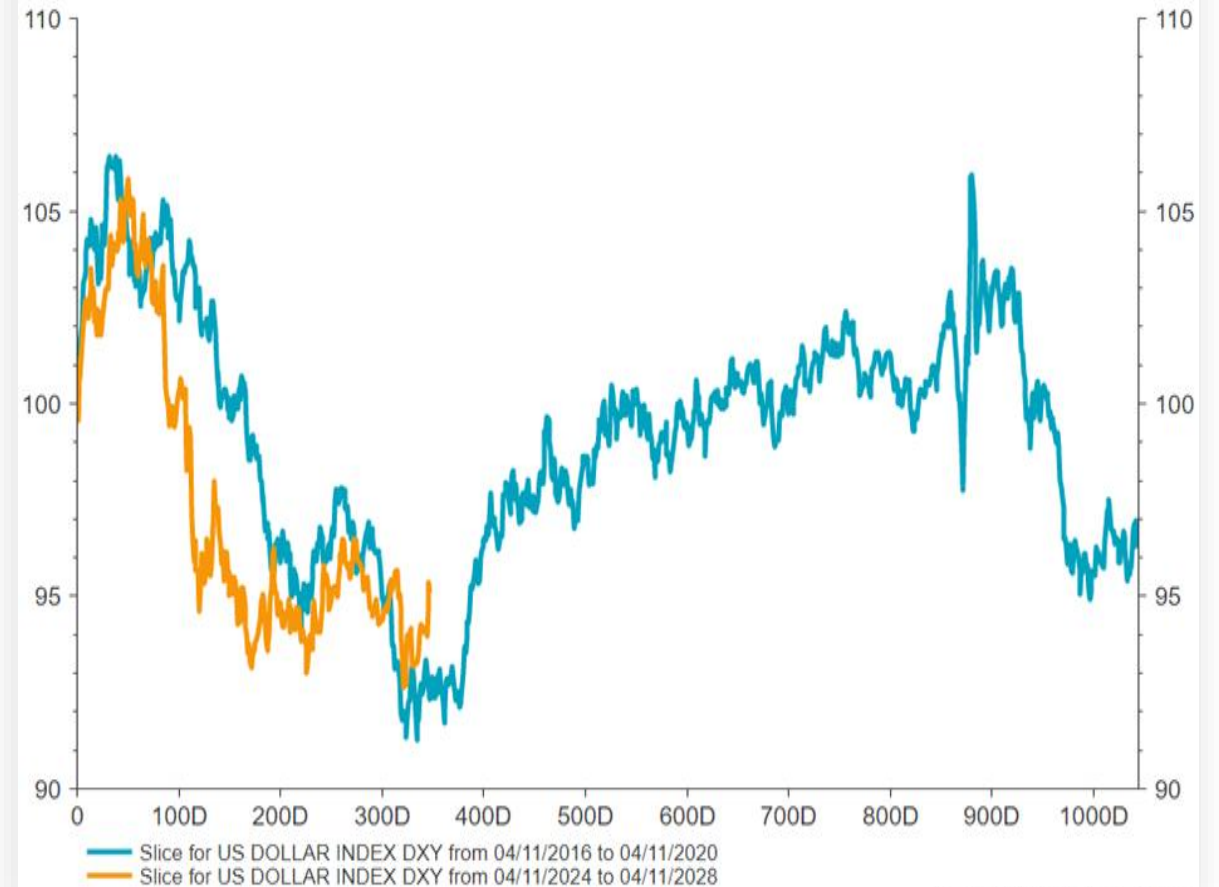

Risks to our base case are now more tilted to the downside

Room for countertrend rally, lowered EM equities exposure

- > As we see a countertrend rally in the dollar as a key downside risk to our base case scenario, we continue to monitor developments closely. While we think that turmoil in the Middle East as things stand will not derail the prospect of a synchronized global cyclical upswing, the risks to our base case of a synchronized shift have become more asymmetrical.
- > We expect the market to become more perceptive to the asymmetries surrounding the dollar. If the Iran war has indeed kickstarted a temporary revival of the dollar, we only have digested some 20% of a typical countertrend rally. As a result, we have lowered our emerging equities exposure.

A 2017 redux?

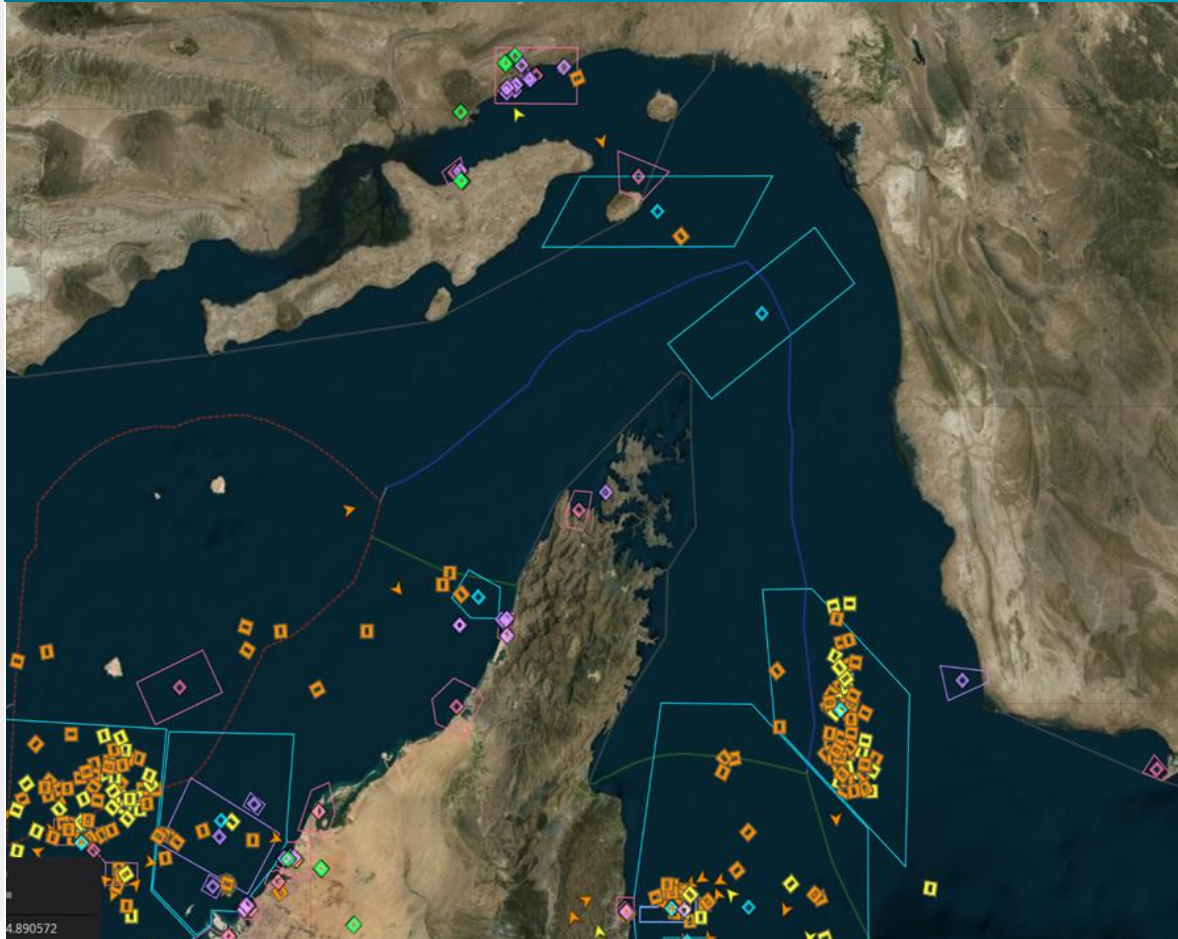

Source: ISFG Datastream, Robeco

Economy

Iran war deals a blow to positive growth momentum

The bottleneck everyone is watching; the Strait of Hormuz

Source: LSEG Datastream, Robeco. All market data to 28 February 2026 unless mentioned otherwise.

Repricing stagflation risk

- > We have seen a very macro heavy February month with the Supreme Court ruling the IEEPA tariffs unlawful and the US and Israel attacking Iran on the 28th, an attack that has evolved into an unfolding conflict in the Middle East. Lastly, US nonfarm payrolls over February declined by 92K versus January, a big miss as consensus expected +60K. While the fog of war obscures a clear view on the duration and extent of the Iran conflict, at the margin the risks to our base case have tilted more to the downside. On a net basis, market have to reprice stagflationary outcomes.
- > We still see a broadening of global growth in 2026, but recent geopolitical events could stall the acceleration in the global manufacturing cycle in coming months. Negative supply shocks, like the blockage of the Strait of Hormuz, tend to frontload inflationary pressures, followed by negative implications for real activity. Therefore, the longer the Middle East conflict lasts, the more the market needs to price a stagflationary twist in its 2026 outlook. Around 20% of the world's oil & gas production passes through the Strait of Hormuz, with 83% heading towards Asia. We see Asian economies as most vulnerable to a persisting oil price shock.

Economy

Iran: How ugly can this get?

Oil prices can skyrocket during Middle East wars

Oil price return after 3 months into major Middle East conflicts

Duration of the conflict key to medium term impact

- > Heading into the Iran war, the global economy enjoyed a surplus in oil markets around 1.5 m/bpd. As such, there was excess supply. Taking this benign starting point into account and the fact that oil already has rallied by > 20 % whereas the average rally following Middle East conflicts is 26%, gives the impression that we are close to "peak oil price" from this conflict.
- > However, with around 20% of oil supply facing a logistical bottleneck, the risks of a supply squeeze still loom. Only around 5 m/bpd can be re-routed via pipeline. As such, the price risk can be non-linear if this conflict drags on for another month. This is also gleaned from previous Middle East conflicts. In the 3 months following the Yom Kippur War in 1973, the oil price remained well behaved despite successive production cuts by Arab states. Yet, it exploded in January 1974 and almost quadrupled in the next 3 months.
- > Thus, a lot hinges on whether the Iran war drags on. The Iranian regime seems to have prepared for elimination of its leadership and clings on, broadening the attacks to surrounding countries. Chaos and division among allies could give Iran an edge. The trigger to end this war will likely be an intensifying affordability crisis in the US.

Additional information for investors with residence or seat in Peru

The Superintendencia del Mercado de Valores (SMV) does not exercise any supervision over this Fund and therefore the management of it. The information the Fund provides to its investors and the other services it provides to them are the sole responsibility of the Administrator. This Prospectus is not for public distribution.

Additional information for investors with residence or seat in Singapore

This document has not been registered with the Monetary Authority of Singapore (“MAS”). Accordingly, this document may not be circulated or distributed directly or indirectly to persons in Singapore other than (i) to an institutional investor under Section 304 of the SFA, (ii) to a relevant person pursuant to Section 305(1), or any person pursuant to Section 305(2), and in accordance with the conditions specified in Section 305, of the SFA, or (iii) otherwise pursuant to, and in accordance with the conditions of, any other applicable provision of the SFA. The contents of this document have not been reviewed by the MAS. Any decision to participate in the Fund should be made only after reviewing the sections regarding investment considerations, conflicts of interest, risk factors and the relevant Singapore selling restrictions (as described in the section entitled “Important information for Singapore Investors”) contained in the prospectus. Investors should consult their professional adviser if you are in doubt about the stringent restrictions applicable to the use of this document, regulatory status of the Fund, applicable regulatory protection, associated risks and suitability of the Fund to your objectives. Investors should note that only the Sub-Funds listed in the appendix to the section entitled “Important information for Singapore Investors” of the prospectus (“Sub-Funds”) are available to Singapore investors. The Sub-Funds are notified as restricted foreign schemes under the Securities and Futures Act, Chapter 289 of Singapore (“SFA”) and invoke the exemptions from compliance with prospectus registration requirements pursuant to the exemptions under Section 304 and Section 305 of the SFA. The Sub-Funds are not authorized or recognized by the MAS and shares in the Sub-Funds are not allowed to be offered to the retail public in Singapore. The prospectus of the Fund is not a prospectus as defined in the SFA. Accordingly, statutory liability under the SFA in relation to the content of prospectuses does not apply.

Important information

The Sub-Funds may only be promoted exclusively to persons who are sufficiently experienced and sophisticated to understand the risks involved in investing in such schemes, and who satisfy certain other criteria provided under Section 304, Section 305 or any other applicable provision of the SFA and the subsidiary legislation enacted thereunder. You should

consider carefully whether the investment is suitable for you. Robeco Singapore Private Limited holds a capital markets services license for fund management issued by the MAS and is subject to certain clientele restrictions under such license.
